7. The *Palacio* MS version differs (Cuevas, op. cit., p. 314): "*ynmpan quinquauhtecuaque ica in tzotzopaztli ohuel*"—"*despues los despedaban las mujeres con el cuchillo del telar.*" Tezozomoc (op. cit., p. 204) thus describes it: "*abriendolos por los pechos, con un Tzotzopaztli, que es un palo ancho, con que usaron las Mugeres, à manera de espada, à cuchillo, cuadando el corazon, que tenedan los cuias presos, en la tinaxa de la cocina, y cortandolos los cabezas, como anteriormente hacen à los Sacrificados, y guardandolos.*"

X 796 [204] banners, the offerings, they set them in order, and bound them upon the pole.[2]

mana, conjilpia cuenmantitech.

Enough. Here endeth [the telling of] this feast, which was named Atemoztli.

Ie izquich, njcan tzonquiça inj ilhujtl in motenemi Atemuztli.

2. The same pole is mentioned in the month of Etzalqualiztli. See pp. 77-8, 84.

Thirty-sixth Chapter, where are related the feasts and sacrifices which were made in the days of the seventeenth month, which was called Tititl.[1]

Seventeenth feast: this was known by the name of Tititl.

Upon [this] feast died a person named Ilama tecutli—[one in] her likeness, a ceremonially bathed [slave].[2] The majordomos procured her.

And the adornment of [the likeness of] Ilama tecutli was [as followeth: she had] her white skirt, her white shift—completely white. And over this she was girt with [what was] named the star skirt. This was bedight with small sea shells, on cured skin cut into long, thin strips, [with] shells set at the end of each [strip]. She wore it about her hips over [the other skirt]. When she walked, much did [the shells] jingle, the pleasant sound [carrying] far. And her sandals had white toes, woven with cotton threads.

And her shield was covered over with white clay and pasted with eagle feathers. Its center was made of eagle feathers, sewn to the middle [of the shield], and it had pendants at the edges, of heron feathers, and [tassels shaped like] grasshopper heads, of eagle feathers, hung at the point. And in [the other] hand she bore her weaving stick.[3]

And her face painting was in diverse colors. About the lower part of her face, they spread black. It was said, the lower part of her face was blackened. And upon her nose and forehead, they laid yellow ochre.

And her eagle feather headpiece, a headdress with eagle feathers arrayed upon it, consisted only of hair, twined, arranged and well disposed, braided and intertwined with itself. The headdress was called *tzompilinalli.*

1. "Hierarchicum," Godfrey suggests (*op. cit.*, p. 314). Orozco y Berra (*op. cit.*, Vol. II, p. 39) writes: "Tititl. *Temporada sombrea, tiempo oportunidad; Retorcid, sombra ó sombra sombra. Como no hemos encontrado la interpretación de Retorcid, y vemos la raya del verbo tititia, redoblar dinero de la cuenta.*" Temporandos (*op. cit.*, p. 309) amplifies his version thus: "*porque la era de frios, y heladas, las quales sombran mucho, por la poca roya de que sombran, y porque por este entonces tiempo, cubrahan aquellas, con Guarnas, y Andaias, que tenian las cosas Provisiones contra las aguas, y se sombraban, y desenbrian como á carnas.*"

Durán (*op. cit.*, Vol. II, pp. 201-2) writes: "*quiere decir sombrar . . . lo significaban en el cielo dos estrellas sombreadas al ojo al cielo. . . . hablo hablar de temporal y hombrear atisbar como con ojos de las estrellas.*"

The Tonsa Calendar refers to the gods controlling and thus supporting "the machine of the world" because of the violent winds. Kubler and Gibson, *op. cit.*, p. 84.

2. Cf. Anderson and Dibble, *op. cit.*, p. 1, n. 7; also supra, pp. 130-31 and n. 3.

3. The shield and the entire ensemble of the goddess are closely illustrated several times in the *Codex Borbonicus.* Paso y Troncoso (*op. cit.*, p. 273) thus describes the shield: "*Es redonda, que se acostumbra muy hace á la desempeñada, que hace dejando las tinieblas, en blanco; tiene un cuero de phenix de figuda pequeñas en el centro; y tiene cuatro repuestas cuero a chuzo de phenix: cuatro pequeñas de garzonas, redondas (que algunas hace*

X 796 And before she died, she danced. The old men
536 beat the drums for her; the singers sang for her—
they intoned her song. And when she danced, she
[781] wept much, and she sighed; she felt anguish.[4] For
time was but short; the span was but brief before
she would suffer, when she would reach her end on
earth.

Auh in aiamo mjquj mjtotiaia, qujtlatzotzonjliaia in vevetque, in cujcanjme, qujcujcatia, quevilia in jcujc. Auh in jquac mjtotiaia, vel mochoqujliaia, yoan elcicivia, mociappoa: iehica ca ça achitonca, ça ixqujch cavitl y, ça ixqujch cavitontli y, inic ontlacotiz, in ie compoloz tlalticpactli.

X 796 And when the sun was past its zenith, they then
took her up to the top of the temple. All the imper-
sonators of the demons went, laying hold of and
accompanying her, proceeding in rows. Yet another,
the impersonator [of Ilama tecutli], went leading
the people—one whom verily they thought a
god[dess] on earth, who was only a man whom they
[so] adorned.

Auh in jquac ōmotzcalo tonatiuh: njmā ie ic qujtlecavia in teucalticpac, qujtzitzqujtivi, qujtocativi in jxqujchtin im jxiptlaoā diablome cempantitivi, teiacātiuh in oc ceppa ixiptla, in vel-qujmoteutia tlalticpac, çan tlacatl in qujchichioaia.

And when they reached [the summit], they cut
open her breast. And when she was slain, then they
severed her head. And her head they gave to him
who led. He took it in his right hand, going off
with it, going dancing, marking the dance rhythm
with the head. He went before them, leading all the
likenesses and vicars of the devils. They circled the
temple; then they descended, in the same way [as
they had come up], ranged in rows, and going in
lines. And when they reached the ground, thereupon
they dispersed and went to their houses, to their tribal
temples, where [the gods' raiment] was guarded.

tomado por cuenta, porque lo parezca; pero que no son sino plumas), é inpirdas en otras primeras, y de ellas pendientes, otras plumas grandes de Aguila."

4. Torquemada (*op. cit.*, p. 294) writes, however, that "*a esta muger le era permitido llorar, y entristecerse mucho (cosa negada en otras, que morian como Dios) y así se entristecia, suspiraba, y lloraba, con la memoria de la muerte, que de presente, y cerca esperaba.*"

5. *Chichiua* may be rendered in two ways. We have been guided largely by the context.

6. In the next chapter (fourth) Sahagún notes that "*hacian la estatua del dios de fuego de arquimas, y pulan atadas, unas con otras, que ellos llamaun colotli, que quiere decir atadurio o atado.*"

And a fire priest arrayed himself; he was bedight as a young warrior. He imitated a young warrior, with his netting cape, his forked heron feather device, his deer hoof [rattles], his lip pendant. He departed from the temple above, and brought a *maguey* leaf on which was a small banner.

When he came down to the ground, he then went to the eagle vessel, where stood the grain bin, and there he placed the *maguey* leaf.

And when he had placed it there, then appeared the priests, hastening greatly, as if [all] strove to be first. This was known as, and called, "The Flower Race." [For] they climbed up to the temple, where the flower was. It was named "Flower of the God."

And upon reaching the summit, then the priests laid fire to, and burned, the grain bin. Once again they descended, rushing down with the flower; they cast the flower upon the eagle vessel, in which the grain bin burned. Then all the priests ran off, in all directions. Enough of this.

And upon the morrow, then began [the sport of] casting bags at people. All made bags for themselves. They carried grass nets, and filled them with the flowers of reeds or with scraps of papers. They shredded paper; they shredded it fine and bound it to the inside [of the nets]. And some carried nets [made] as it were like gloves, also filled with reed flowers; [these] were called hand bags. And some only prepared themselves green maize leaves, which were made into bags; they pressed the leaves into balls.

And now it was commanded that none should put stones [in the bags]. Those who were yet small boys played purely in fun when they began the mock-fight with bags; only gradually it quickened. As the mock-fight was fought, as it flared [in intensity] blows were struck, perchance at the heads [of the participants], or their backs, or their breasts, as they dealt blows.

And the older boys cast bags at the maidens—those [yet] with long hair[dress]—whenever these came before them. They cast bags at them, surrounded them, [so that] in truth, they made some of them weep. And when some woman took forethought, if she went forth, she carried her staff, or else [carried the branch of] some kind of thorny plant. If anyone came upon her to cast a bag at her, she pursued him; she was thus defended.

And if she carried nothing for her defense, verily

they formed a ring about her. And some of the young boys spied [as she came], and, that they might not display their bags, some hid them [by their sides].

And when they came upon a woman whom they had waylaid somewhat, then they turned upon her and struck her, making it known to her only when they struck her, when they had cast the bags at her, saying unto her: "It is a bag, O our mother!" Then they took to their heels.

And this was done when the sport of casting bags was played. And all these days the women watched themselves well; they were prudent when they walked abroad, when they followed the roads.

Enough. Here ended Tititl.

Thirty-seventh Chapter, which telleth of the feasts and ceremonies performed in the days of the eighteenth month, which was called Izcalli.[1]

The eighteenth feast was the one named Izcalli.

Upon the tenth day of Izcalli *tamales* stuffed with greens were eaten. [On this day] it was maintained and said, "Our father, the fire, roasteth [food] for himself." They set up his image—only a framework of wood which they made.[2] They gave it a mask, his face, made of precious green stone, horizontally striped with turquoise. It was very awesome; it gleamed as if it shone exceedingly; it cast much brilliance.

And they fitted upon it its quetzal feather crown, quite narrow at the bottom [but] large enough to fit around the head. The quetzal feathers spread out [above]. And two plumages stood one on each side, made like his horns. And the plumages both had quetzal feather vases. And to the base of the quetzal feather crown was sewn yellow hair, very carefully trimmed. And his lordly hair hung to his shoulders; and it was very evenly cut.

And when they put it on him, [it was] verily as if [it were] his own hair.

And they laid over him a cape of quetzal feathers, made entirely of quetzal feathers, which hung long, trailing upon the ground. The wind penetrated it, [making it, as it were,] stir upward, [so that it] glittered and gleamed.

And his mat was made of the skin of an ocelot—an ocelot skin laid flat [with] paws extended and also its head lying flat. And this [image of] Xiuhtecutli was before a brazier. At midnight [the priest] used the fire drill [to make the new fire]. And when a flame burst forth, then he blew upon it, and then made the fire.

And when the fire had been lit, when it was dawn, and the morning had reddened, then ranged them-

1. "Izcalli," or "the growing," according to Orozco, op. cit., p. 316. Temporando favors the meaning "calentó" (op. cit., p. 300): "quiere decir: Remolinado, ó el de la remolinadas; porque por aquel tiempo, el querite comdar el tiempo, y pasar de frio á calor, y comenzaje la Primavera." In Clavigero (op. cit., p. 172, n. 24) it is suggested that the literal meaning of Izcalli is "born in the house."

2. Sahagún's corresponding Spanish text says: "hacian la estatua del fuego, del fuego de arquijon, y pulan madera, como una cruz, que ellos llaman cabalá, que quiere decir tendera, o cadalso."

X 796 selves in line and came up the youths and small boys, who offered the old men serpents which they had captured. The old men took these from them and cast them into the fire—everything, whatever they had captured; all the birds—the thrush, the precious [136] thrush, small birds found among the reeds—all the varied kinds of birds; and the water dogs, scorpions, striped lizards, trout, the white fish, the sand fish, crabs, frogs, gulls[3]—all these they cast into the fire.

[262] Then appeared [the boys], and [the priests] offered each one a *tamal* stuffed with greens. And all the common folk made themselves *tamales* stuffed with greens. They laid them before [the image of] Xiuhtecutli. As many as offered to Xiuhtecutli did so purely voluntarily. And some laid them as offerings only in the tribal temples.

And the *tamales* stuffed with greens they also named precious green stone *tamales*. And all the common folk presented among themselves their *tamales* stuffed with greens; they were presented among themselves. Whoever first cooked her *tamal* of greens then went to offer it to her kin. Thus she showed her self-esteem.

[262] And the sauce of the *tamales* stuffed with greens was a sauce of crabs.[4] And the sauce was called *chamolmolli*. And when the good common folk ate, they stood sweating and burning themselves. And the *tamales* stuffed with greens were very hot and gleaming; and they ate them hot, [so that even] their noses steamed. And the husks they set apart; no one let them reach the fire. They strewed all of them in the water.

[273] And when this was done, when all was eaten, thereupon wine was drunk. It was said: "They are refreshed; the old men refresh [themselves] there in the Temple of Xiuhtecutli." And thus they refreshed [themselves] with wine; they sat drinking and singing until it was dark. Here ended and concluded [the time when] *tamales* stuffed with greens were eaten; the eating of *tamales* stuffed with greens.

X 796 And when Izcalli came, when twenty days were counted, [this was] when Milintoc roasted something 778 for himself—[he who] likewise [was god of] fire. They also set up his image, which was only a frame-

3. Cf. Sahagún (Robredo ed.), Vol. III, p. 194 (*mulquanochi, xovili, amilotl*); p. 195 (*axoloti, xalmichi*); p. 196 (*acocilin*); pp. 187-8 (*acatzanatl*); p. 189 (*acachichictli*). *Axoloti* is *Amblystoma dumerilii* according to Cortés (*Lista del ichtiol.*, p. 198), and *Acaltetepon mexicanum* (mud puppy) according to Clark (*op. cit.*, Vol. II, p. 75); Robert Lehmann-Nitsche ("Tzacatipoca und Quetzalcoatl," *Zeitschrift für Ethnologie*, Vol. LXX, p. 78) says it is a "*schlangenähnliche Larche (Fischkarche)*." For *xovilin*, Clark (*op. cit.*, Vol. I, p. 90) has *Cyprinus auratus*; for *amilotl* (Vol. II, p. 73) "a white fish like a sand eel." Cf. also Seler, *Einige Kapitel*, p. 233.

4. Cf. Sahagún, *op. cit.*, Vol. II, pp. 155-6.

work which they made.[5] They put upon it a mask made of [a mosaic of bits of] shell. The lower part of the face was blackened, made black with black stones called *teotetl*. And they striped the face horizontally with black mirror stones.

And upon his head they fitted a ball of yellow parrot feathers; the device for the back of his head, made of precious feathers, served as the lock of hair of the back of his head. And they set upon him his flame headdress, made of feathers from the neck of an eagle.[6] This glowed, and [it had] plucked [single] arara feathers set in order.[7] When he put it on, it appeared in truth to flare up. And his vestments were made only of arara feathers—a red arara feather cape, which trailed long.

And they laid before him *tortillas* made of uncooked, ground maize,[8] or small *tortillas*. They ground the maize. And when it was [ground to a] flour, then they mixed hot water with it, and afterwards it was sweetened. Then, they offered the *tortillas*, some [of which] had shelled beans, cooked, not raw.

And when they had set Milintoc in place, then severally all the common folk made offerings before him, coming together each with five [*tortillas*]. A great quantity of small *tortillas* were heaped up before him.

Similarly the youths and small boys were ranged in order; they hung on sticks the serpents and all the small animals, as hath been said. They offered them to the old men, and the old men cast them into the fire. And the quite small serpents and the other quite small animals burned up and charred. And the well-grown serpents, when they had been roasted, they went to take out, casting them forth upon the hearth. There they were piled up. Later, the old men of the tribal temple ate them.

And the youths and small boys then came forth, and they offered each of them a small *tortilla*. Then they departed. And after this the small *tortillas* were eaten.

Thereupon [all] were refreshed [with wine]; the old men refreshed themselves there at the Temple, the tribal shrine, of Milintoc. And the wine makers, those whose office it was to make wine, left with

X 796 For when were ended these twenty days of Izcalli, thereupon set in the five days of *nemontemi*, or *nenontemi*, which are not counted.[9] And the *nemontemi* were feared and held in awe. None commanded others, none quarreled [with others]. And if any, at this time, disputed with others, it was said they would always do thus. And he who was born at this time they named Nemo. They said: "It hath been said that [he hath] no day sign. No reward is his; he will live in misery. He will live in poverty upon the earth."

Auh in onqujz y, cempoalli Izcalli, njmã ie ic oalmotlalia in macujlilhujtl in nemõtemj, anoço nenontemj, acampouhquj: Auh in nemontemj, vel imacaxoia, mauhcaittoia, aiac teaoaia, aiac maoaia: auh in aca vncã teaoa, qujlmach cenqujcuj. [56] 777

And during [the month of] Izcalli, in the first, second, and third years, nothing [in addition] was done. But on the fourth year, a great [festival] was observed. At that time died those [adorned as] Ixcoçauhqui, the impersonators of Xiuhtecutli—ceremonially bathed ones. Sometimes many died; sometimes not many.

Auh in jpan jn Jzcalli: injc ce xivitl, yoan ic oxivitl, yoan iquexivitl, atle muchioai : auh qujn ic nauhxivitl in moveichioa, qujniquac mjquja in Ixcoçauhque, in jxiptlaoan Xiuhtecutli: tlaaltilti, in quẽmã mjequjntin in mjquja, in quemã amo mjequjnti.

And upon the morrow, on the morning of [the feast of] Izcalli, the bathed ones entered the sand. They brought them into the sand there at Tzonmolco. All the women carried all their womanly array, and the men carried all their array (as hath been told elsewhere). And they carried for them their paper adornment; it went upon a wooden globe.

[293]

Auh in ie iuh muztla, in ic oallatvi Izcalli: in tlaaltilti, onxalaqui, qujmonxalaquja in vmpa tzommolco: in cioa muchi qujtquj, in jxqujch incioatlatquj: yoan in oqujchtia, muchi qujtquj in jxqujch intlatlatquj (in juh omjto cecnj): auh in jmamatlatquj, muchi qujmjtqujlia: quauhtzontapaioltica icietiuh.

And when they brought them there, thereupon they arrayed them, [so that] all were ornamented. They put upon them their paper array. And when all were prepared and arrayed even as Ixcoçauhqui was arrayed, and the women adorned also in the same manner, thereupon all climbed up to [the Temple of] Tzonmolco, in rows. And when they came reaching there, they circled about the offering stone. Then, once again all came down, likewise walking in rows.

Auh in oqujmonaxitiq̃, njman ie ic qujnchichioa, techichioalo, qujmonaaquja in jxqujch imamatlatquj. x 796 hand they grasped a paper incense bag. Thereupon
[293] they came down [from the temple], dancing rapidly.

And when they had descended, then they circled [the courtyard], they went around [the courtyard] only four times. And when they had danced, then they dispersed and went away, and thereupon all entered the palace in proper order. And this was known
[535 as the Lordly Dance; [for] all the lords danced the
628] Lordly Dance, [and] it was the privilege exclusively of the chiefs that they should dance the Lordly Dance. This was done every four years.

Thus [was it done].

[304] Early in the morning was begun the boring of ears, when they pierced the ears of the small children. And they pasted them with yellow parrot feathers and with soft, white feathers, which went mixed with the yellow ones.

x 796 And for a gift they made *pinolli*.[11] And the mothers
608 sought out some master of the youths, seasoned warrior, or leader of young men who might wish to be as a parent, thus to become their [children's] uncle.
[431] Also some sought out a woman who might be an aunt, and they offered her gifts.

To the man they offered perchance a tawny cape or a coyote fur cape. And gifts were also offered—they also offered gifts to—the women.

[304] And when they pierced the ears [of the children], thereupon they took the little ones to singe them; they laid and made a fire, and scattered much incense over the flames.

And hence it was said: "They are singed." The old men of the tribal temple seized all of them. They took the small children and dedicated them over the fire. Then they gave them uncles and aunts. And the small children cried out and whimpered. Then they went to their homes.

x 796 And when they had gone to their homes, there-
upon all ate and drank.

273 And then, in the temple, began singing and dan-
535 cing at midday. Then once more all went to the temple. The uncles and the aunts carried the small children; carriers took the wine, poured into small gourds which they carried, and [poured] into small earthen jars. And when they arrived there, all sang. Thereupon was quieted the dance; they carried the small children upon their backs. Then they went giving them wine. All gave it to each other.

11. The *Real Palacio* MS here contains the line *yoan yn chiamapinolli*, which probably identifies the *pinolli* as ground dried maize and chile seeds.

And for drinking wine [they used] very small drinking vessels. And all gave wine to drink to the small children.

Hence was named [the occasion] "The children all drink wine."

And at sundown this all ceased and all went to their homes. And when they had departed to their homes, once again there was dancing in their courtyards. And the kin [of those who celebrated] drank wine—the revered old men and old women.

Here ended Izcalli.

And for this reason was [the feast] named Izcalli (The Growing): at this time they lifted by the neck all the small children. It was said that thus they grasped them for growth; they grasped them for growth that they might quickly mature.

Enough. Here ended and concluded Izcalli.

X 796 **Thirty-eighth Chapter, which telleth of the feast which was named Uauhquiltamalqualiztli,**[1] **which was celebrated after the days of the month named above; and when [it was this feast], they celebrated it to honor him who was their god, whose name was Ixcoçauhqui.**

Injc cempoalli on caxtolli omei capitulo: itechpa tlatoa in jlhujtl, in moteneoaia: Oauhquiltamalqualiztli, in muchioaia in jpan ic tlamatlacti in metztli in tlacpac omjto: auh in jquac y, quijlhujquixtiliaia, in inteouh catca, in jtoca Ixoçauhqui.

Izcalli and the end of Izcalli are placed verily in the month of January, after eight days, when it was already the eighth day. By custom, it was upon the eighth day. When this [day came], *tamales* stuffed with greens were eaten. In all places they observed [the custom]; everywhere. Nowhere was this not done. In every house, in every village, two [*tamales*] were eaten, when it was the feast of the *tamales* stuffed with greens; all made *tamales* thus stuffed. And all offered [this] food, one to another. In this wise were they given; they were given among themselves—to their companions, to those whom they knew. They were offered not in ill will but in gladness.

[262]

Izcalli, yoan Izcalli tlamj: inin vel ipan motlalia in metztli henero, ie iuh chicueilhujtl manj, ie ichicueilhujoc, ie iuh chicueilhujtica: in ijquac in, oauhquijl, tamalli qualoia: novian qujtzacutimãca, ipanoca, acã cavia: in cecencalpan, yoan in cecemaltepetl ipan, vel ontetlamja in neoauhquijtamalhujlo, in neoauhquijltamaltilo: auh nepanotl nemacoia, nepanotl nemamacoia, ic netlatlamacoia, necepãmacoia, nenetech macoia, necnjuhmacoia, neiximatcamacoia, amo netlavelmacoia, nepaccamacoi.

Whoever first cooked her *tamales* stuffed with greens then went to offer it in her tribal temple, to her neighbor, to those who lived in nearby houses. And if her kin lived in distant parts, first she made an offering for them.

in aqujn achto oicucic ioauhquijtamal njman ic iauh qujmacaz in jcalpo, in jcalecapo, in jcalnaoac tlacatl: yoan in vecapa ivaniolquj, achto contonaltiaia.

X 796 264 And when this was done, when she had offered it everywhere to others, then they [all] sat down to eat their *tamales* stuffed with greens. They were arranged in a circle; they brought—assembled and gathered together—their children, forming family groups.

Auh in ie iuhquj, in onoviampa qujtemamacac njmã motlalia in qujquazque, in inoauhquijtamal, moiaoaloa, qujncemololoa qujnnechicoa, qujncentlalia qujntecpichoa in impilhoã inin cencaltia.

And first they made an offering to the fire; they offered five *tamales* stuffed with greens before the hearth. These were in a wooden vessel. Then they each set in place and made an offering for their dead, where they lay buried.

Auh achtopa contlamanjlia in tletl, tlecujlixquac cõmana in oauhquijtamalli macujltetl, quauhcaxtica mantiuh, mollotiuh, çatepan cecentetl q'ntlatlaliliaia, qujnmamanjlia in immjccaoan, in vncã tototoque:

And as they ate, they sat burning themselves, sweating with heat. Steam arose [from the *tamales*]. As they ate, they ate with relish, sucking upon it and gulping, sitting panting, and smearing it upon their lips.

njmã ie ic tlaqua, muchichinotoque, in jitonjtoque, vel totontlapetztic ipotoquijztiuh in qujqua, in qujpaccaqua tlatlaltequj, ontlaltectivi, neneciuhtoque, cocociuhtoque:

X 796 252 And the [corn] husks [in which were wrapped] the *tamales* stuffed with greens [were laid] apart;

auh in jnoaio, oauhquijtamalli, çan nõqua, cecnj qujtlaliaia, atlan cõtepeoaia: auh aiac vel qujpaloaia

1. *Uauhquiltamalqualiztli*—the eating of *tamales* stuffed with greens. Cf. Anderson and Dibble, *op. cit.*, p. 12, n. 66. Much of the material in this chapter is discussed also in the previous one (Izcalli).

they placed them to one side. They strewed them in the water, and none, verily, might taste the husks. Because of this, care was therefore taken that none should be scorched, burned, or dropped into the fire.

in izoatl: ipampa ic momalhujaia inic amo aca mochichinoz, motlatiz, tleco onvetziz. 796x [252]

And only during one day were they eaten. By night they were done; all finished. They left nothing for the next day.

Auh çan vel cemjlhujtl in qualoia: in ic iooa otlatlatlan, moch tlamja, aoctle qujmocavia in jmuztlaioc.

And when it grew dark, the old men and the old women drank, alone. It was said: "They refresh themselves."

Auh in oiooac tlatlaoana in vevetque in jlamatque, çanjoque: mjtoaia, Texcalcevia. [273]

And after this they set up the image of the fire [god], Ixcoçauhqui, Xiuhtecutli, Tlalxictentica, Cueçaltzin, Nauhyoueue. They gave him figure and substance of a dough of amaranth seed. These things they whose office it was, did—the men of the tribal temple, known as the Tzonmulca[2]—who especially worshipped [fire] as a god.

Auh in jquac y, qujtlaliaia in jxiptla tletl Ixcoçauhquj, Xiuhtecutli, Tlalxictentica, Cueçaltzin, Nauhioveve, tzooalli in qujtlacatlaliaia, in qujnacaiotiaia: iehoan qujchioaia in jtech povia calpoleque, moteneoa: Tzommulca, oc cenca iehoan in qujmoteutiaia.

And when the twentieth day came, it was said: "Izçalli hath ended." They who provided ceremonially bathed victims then published and made it known to others [that they had secured sacrificial victims, each] setting forth in public his ceremonially bathed one, a slave whom he had bought, made [to be] the likeness of Ixcoçauhqui; the owner then adorned him, causing to be placed upon him all the array of Ixcoçauhqui. Thus it was said: "The bather [of the victim] gathereth [his wealth]."

Auh injc onaci cempoalilhujtl: mjtoa, Izcalli tlamj: in tealtianj, iquac qujteittitia, qujteixmachtia, teixpan qujquetza in jtlaaltil iez, in oqujcouh tlacotli: in jxiptla muchioa Ixcoçauhquj, iquac ic qujchichioa itech qujtlalilia in jxqujch in jnechichioal Ixcoçauhquj ic mjtoaia, tlaixnextia in tealtianj: [567]

And for this reason did one say "the bather [of a victim]": he continually bathed his victim with hot water all the time until he went to his death; all the time he caused him to know that death would be his lot at an appointed time; that he would die in the count of Tlacaxipeualiztli.

auh injc mjtou, tealtianj: in jtlaaltil muchipa caltia, atotonjltica in jxqujch cavitl mjqujtiuh, in jxqujch cavitl qujmatitiuh in vncā imjqujz tequjpā in jtlapoalpan: in mjqujz ipan tlacaxipeoaliztli.

And before he died, he favored him greatly. The bather was careful of [the victim]; he enriched him [with gifts]; he restored all to him. All the food which he offered him was good.

Auh in aiamo mjquj, cenca qujmavizmatia, qujçeçēmatia in tealtianj, qujtlanenectia qujtlacuecuepilia: muchi qualli tlaqualli in qujmacaia:

And a harlot was provided as his guardian. Constantly she amused him; she caressed him; she made him laugh and be merry. Taking him about the neck, she rejoiced, she embraced him. She caught his lice [for him]; she combed his hair and arranged his hairdress. She made him forget his sorrows. And when the time came for the bathed one to die, the harlot took everything; she rolled and bundled up all the belongings of the bathed one. That which he wore he placed upon her; that which he had used

2. Tzonmulco: temple of the fire god; also one of the division of Teocalcalco. It is mentioned in the Appendix, p. 177, as the sixty-fourth building. Cf. Sahagún (Bustamante ed., Vol. I, p. 227; Vol. V, p. 74).

×796 when he had been living in the likeness of another,
[548] had walked with head high, had lived as a captive, had been drunk, and had gone in high esteem.

oaquetztinēca otlamattinenca, omjvintitinēca omovelitztinenca.

And for this reason was [the month] named "Izcalli hath ended": all the small children, all of them they took up and lifted by the neck. For it was said,
[827] they [thus] grasped them that they might grow; thus they would speedily grow tall; they would wax great and strong.

Auh injc mjtoa Jzcalli, tlami yn izquichtin pipiltotonti, muchintin qujnquechaana, qujmacopiloa: ic mjtoa qujmizcalloana, qujmizcalaana, ynic iciuhca quaquauhtiezque, manazque, mooapaozque:

And they divided the heart of the *maguey* plants;
[824] they broke, peeled, and opened it. And they cleaned the cactus and pruned its branches, because thus it would quickly be given new life and growth.

yoã in metl qujiolloxeloa, qujiollotzaiana, qujiollotlapana, qujiollotoma: auh yn nopalli qujtlaiectilia, qujmatepeoa, ipampa ynic iciuhca manaz, mozcaltiz, mooapaoaz.

×796 And at this [feast of] Izcalli, there also came to
852 pass, every four years, the bringing out of the children and the drinking of wine by the children. And then the chiefs danced a lordly dance, along with their courtiers. And they put on their wigs of hair;
[301] in truth they were head pieces made of long hair and covered with green stone. [The hair] fell, verily, to the chiefs' waists.

Auh yn ipan y, Izcalli, no vncan muchioaia, ynic nauhxiuhtica nepilquixtiloia, pillaoanoia: yoan vncan motecujtotiaia in tlatoque, yoan yn inpillooan: yoan contlaliaia yntzonpilinal, centlamantli, tzoncalli catca, viiac in tzontli ic tlachioalli, qujchachalchiuhiotiaia, vel incujtlacaxiuhiã vetzia in tlatoque.

And for this reason one said that the children were brought forth: the fathers and mothers of all the small children first sought out those who would bring them to the priests' dwelling, a place named Tezcacoac—a woman and a man whom they invited.
[608] It was said that they were to be uncles and aunts [of the children]; they became uncles and aunts [for them].

Auh ynic mjtoa nepilqujxtilo, yn jxqujchtin pipiltotonti, yn jntahoan, yn jnnahoan, achtopa qujntemoliaia, in qujnvicazque calmecac, itocaiocan tezcacoac ce cioatl, ce oqujchtli in qujnotzaia, mjtoa: qujntlatia qujmavitia, tetlati, teaviti:

And not their kin did they take; they secured only their friends, whom they chose and to whom they
[431] gave gifts. They laid out capes and breech clouts for us men. Likewise, for a woman they laid out her skirt and shirt.

until the rosy dawn, when dawn would break and the morning would redden—when the swallow would sing.

And when dawn broke, thereupon all bestirred themselves, and ate and drank. Thereupon the old men of the tribal temple and the singers sat in the courtyard to sing for them. And they walked carrying the small children upon their backs. And [a child who was] a little larger his uncle and aunt came grasping by the hand. There they made him dance; they went through dance movements. And when the sun hung low, after noon, then all gathered at the Tezcacoac. Here the dance and song proceeded—the songs, in all, spreading a sound as of the crashing of waves.

And then began the giving of wine. Everyone carried his wine, and brought it there. Among themselves, all took it and offered it, in earthen jars—all continually giving [it to others], giving and taking in return. Here they gave the wine to all the small children—those who were grown and those yet lying in the cradle, moistening food [in the wine] for them. Verily, everyone already mature was drunk; in truth, all showed that they had drunk wine.

None showed awe [of the wine] as it foamed; none [thought it] precious as it gleamed. It fell to the ground; the wine ran like water.[9]

And they carried their drinking vessels, called *tzicuiltecomatl*, [which had] three legs and, on four sides, had handles.

With ruddy faces, crying out, short of breath, with glazed eyes, all mingled with one another; there were disputes; all circled and milled about. Becoming more intense, all crowded and pressed together, elbowing each other. All took one another by the hands; they were bemused. Embracing one another firmly, [thus] all entered their homes.

Thus one said: "The wine feast hath verily been observed; for the children have drunk wine."

And thus ended and concluded Izcalli. Then came to reign the Nemontemi—five days which had no day-names, which were no longer counted, which were not reckoned in the [day] count. Greatly were they feared and held in awe.

For they were ill-omened and of no use. Nothing was done [during those days]: They were ill-fated, of ill-fortune. For in them was no reward or merit—

only misery, poverty, vanity, misfortune, and a life of woe.[4]

And if one were born at that time he was looked upon with fear; he was shunned. And if he were a man, they named him Nemon, Nentlacatl, Nenquizqui. Nowhere was he counted; he was not a man. And if it were a woman, [they named her] Nenciuatl.

And when [these days came], nothing was done; the palaces and courts were empty; no suits were judged. All stayed at home. None swept with brooms; they only fanned [the dust] with a fan, or a turkey quill, or with the wing of a bird; or they beat and cleaned with a cloak.

And no one might then quarrel; [for] this was strongly forbidden to people; it was severely forbidden to them. They were charged that none might wrangle. Neither might one sleep during the day. [If so,] it was said: "[So] shalt thou always."

Nor should anyone fall, or trip, or stumble. All walked softly. And to one who stumbled, they said: "Thou hast the Nemontemi; so shalt thou be. Be thou careful."

And whosoever then took sick and was ill, [of him] everyone said: "He hath sickened. Never more will he rise; no more may he have hope. That he will recover there is no hope." No longer had they hope for him.

And if one yet escaped [death], neither would any pay heed to him nor speak to him. It was said: "For it is only that he by whose grace we live hath acted and determined of his own will."

None, therefore, were comforted nor moved. His kin forgot him and laid him on the ground. No more might he be able to leave, to some degree get up [again], and take nourishment. For the setting in of the Nemontemi was terrifying.

For he had no day sign; he had no name; wherefore no one might, in truth, practice medicine and heal one, nor read the meaning of the days. For verily the days were not numbered; they had no count in all these four days.

Temple of Uitzilopochtli
Conteptl.[1] 1.

Uitzilopochtli's feast came three times; they celebrated his feast [three times] in one year.

The first time was [in the month] named Panquetzaliztli. And this was the time when they took up [to the top of the pyramid] this Uitzilopochtli [and] a second [god] named Tlacuepan Cuexcochtzin.[2] And thus did they take up the image of this Uitzilopochtli: all the priests and youths took it up in their arms. And the image of Uitzilopochtli was [made] only of a dough of amaranth seeds—very large; almost a fathom [tall].

And [the image of] the second [god], whose name was Tlacuepan Cuexco[ch]tzin, was likewise made of a dough of amaranth seeds.

And the image of Uitzilopochtli was made, and took the form of man, there at a place called Itepeyoc. And the second [god], Tlacuepan Cuexco[ch]tzin, was made, and took the shape of man, there at a place known as Uitzumac calpulco. And during the night they cooked and formed [the images].

And when it dawned, they were already shapen. Thereupon offerings were laid before them. And after noon all then danced; all went in procession. And when the sun entered his house [at sunset], they took [the figures] up [to the top of the pyramid]. And after they had gone to set them in place, all descended. [The images] remained there all night. And the priests who guarded [them] were called Itepoch.

And in the morning Peyatzintzin came forth, who was himself the vicar of Uitzilopochtli. [A priest] carried [the god] in his arms. And the image of Peyatzintzin was formed of wood. And he who bore him in his arms was called Teqilhuin Quetzalcoatl. He was richly bedight with his feather device.[3] And the image of Peyatzintzin was thus adorned: [it had on] its hummingbird diadem, its arms, its golden banner, and its green stone necklace. And over the small of its back were hanging the feather device for its back,

3 796 all of fine turquoise. And he who led [the god] car-
[293] ried his serpent staff covered with turquoise.

And when [the priest with] Paynal came to Teotlachco, then [men] were slain before him. Those who died, who were named Amapantzinzin, were both impersonators [of the god Amapan].[4] And many more captives [also] died.

And when they were slain, then they began the procession of Paynal. They arrived at Tlatelolco, and when they had arrived there, the common folk came out to meet him and offered him incense and beheaded many quail [before him]. And then they set forth [again] and reached Popotlan; and in the same way the common folk came out to meet him and offered him incense, and beheaded many quail [before him]. And again they started forth, and arrived there at Chapultepec, and in like manner the common folk greeted him and burned incense, and beheaded many quail [before him]. Thereupon they continued and arrived at Tepetocan, and also the common folk came out to meet him and offered up incense and also beheaded many quail [before him]. Then they set forth and reached Acachinanco, and also the common folk came out to receive him, offered him incense, and beheaded many quail [before him].

Thereupon the insignia went forth first, and when the insignia arrived, thereupon they mounted to the top of Coatepetl, where was [the image of] Uitzilopochtli. And when they had gone up, then they laid
[778] out the wooden serpent[5] and circled about it many times. Then all came down from there.

4. See esp. vocab., above.

5. See Ann. ab., end n. 17.

Here is described a feast which was observed every eight years.

For Atamalqualiztli (the eating of water *tamales*) came to be observed every eight years. At times it was observed [in the month of] Quechollí; or at times it was observed [in the month of] Tepeilhuitl.

For seven days all fasted. Only water *tamales*, soaked in water, were eaten, without *chilí*, without salt, with neither saltpeter nor lime. And they were eaten [only] at midday.

And he who fasted not at this time, if he were noted, was then punished. And much was this, the eating of water *tamales*, hallowed. And he who did not this, if he were not seen nor noted, it was said,—he was visited with the itch.

And when the feast arrived, it was said: "Ashes are put on faces," and "They are [bedight with] sea shells."[6] And it was when indeed all the gods danced. Thus, it was named the dance of the gods.

And all came forth [as] humming birds, butterflies, honeybees, flies, birds, giant horned beetles, black beetles—these forms men took; in these guises they came dancing.

And still others were in the guise of deer. [Some had] garlands of fruit *tamales*; birds' flesh [*tamales*] formed yet others'] garlands. And before them was the maize bin, filled with fruit *tamales*.

And also all [these] appeared—those who played the roles of the poor, those who sold vegetables, those who sold wood. Also appeared one in the guise of a leper. And still more took the forms of birds, large owls, screech owls.[7] And even other [birds] they counterfeited.

And [an image of] Tlaloc was set in place. Before him was [a vessel of] water. It was full of serpents and frogs. And they who were called *Maquizcas* swallowed the serpents [while still] full alive. Each one usually held them only in their mouths, not with their hands. They took them only in their teeth, when they seized them in the water, there before

6. Clavigero ("Storia del Messico," p. 300) translates [illegible] as "le conchiglie di mare." Alternatively appears in the same text, translated as "le pelle [illegible] del [illegible]." Cf. [illegible] translated by Molina, op. cit.

7. Tecolotl, Aztec chichtli, Aztec [illegible] (Sec. ed.). Cf. also Clavigero, op. cit., Vol. II, p. 157, and Joseph Marie Anthony H. de Paravicini, Vol. I, p. 326.

#796 [the image of] Tlaloc. And the Maçatecs went eating the serpents with which they went dancing.

And he who first finished with a serpent—who swallowed it—then raised a shout and a cry; he circled the temple. And they offered gifts to those who swallowed serpents. And for two days there was dancing. Toward evening [of the second day] a procession was held, circling the temple four times.

And then were eaten the fruit *tamales* which filled the maize bin. Everyone took [some] with him when the feast ended.

And the old women and old men wept exceedingly; they bethought themselves that perhaps they would not attain [another] eight years.

They said: "Before whom [among us] will this [feast again] be performed?"

Thus was respite given the maize every eight years. For it was said that we brought much torment to it—that we ate [it], we put *chili* on it, we mixed salt with it, we mixed saltpeter with it; it was mixed with lime. As we troubled [our food] to death, thus we revived it. Thus, it was said, the maize was given [new] youth when this was done.

And when the feast ended, the morrow was called *molpaloli* (the dipping of [*tortillas*] in sauce); because all had [now] fasted for the maize.

Behold [here] a true [relation] of all [the temples] which were the temples of the Mexicans.

Iscuquj in jmchauaca, in ixquich catca intecual mexica.

[In] the [great] square of [the Temple of] Uitzilopochtli, all was thus, [as followeth]:

It appeared to be perhaps two hundred fathoms [square]. And here, in the center [of the square], were very large temples, which were the temples of demons. The one which was tallest, of greatest height, was the house of Uitzilopochtli, or Tlacatecpan Cuexcochtzin. This one was very large, very tall.

And this one was in the middle [of the square]. And with it was the house of Tlaloc. Both were together, side by side. And at the very top, [one] stood a little high[er]—perhaps by [as much as] a fathom.

[Of] both of these, [one] was taller, rising higher; only they were quite similar. And at the top of each was a temple; at the top was a house.

Here was the image of Uitzilopochtli, also named Huitzilopochtli. And in another [house], there was the image of Tlaloc.

And also at the top [of the pyramids] were circular stones, very large, named *techcatl* [offering-stones], upon which they slew victims. Thus they paid honor to their gods. And the blood—the blood of those who died—reached the base, flowing thence. All were thus in all the temples which were of the devils.

And this temple of Uitzilopochtli and of Tlaloc faced the setting of the sun. And its stairway was very wide. It reached up to the top, whereby all ascended. And for all the temples there were stairways; all were alike. Very straight was its stairway.

Tlalocan, the Temple of Epcoatl.

At Tlalocan all fasted in honor of the Tlalocs when they observed [their] feast. And when all fasted, then evil things were done and victims. All danced [bearing] dried maize stalks. And there was dancing in all the houses. It was said, the dance of maize and beans was danced. And when the feast of the Tlalocs ended, thereupon died those who were set apart, and

Maculcalli, and Maculquiauitl.

Here, in this place, here died the informers, those who imparted secrets which they had discovered to those who were not dwellers here—the Tlaxcalteca, or the Uexotzinca, or the Cholulteca, who entered the fortifications here in Mexico; who bore information hence.

And if they escaped, if they went forth taking information, these Tlaxcalteca, or Uexotzinca, or Cholulteca, and all who had entered the fortifications then would emplace [themselves], and thus wait [in ambush] for the Mexicans. And when the Mexicans came there, great numbers would die at that place.

And if [the informers] were noted here in Mexico, then [the Mexicans] laid hands upon them and slew them, hacking them limb from limb, here at Maculcalli or Maculquiauitl.

Macujlcalli, ioan macujlquijavitl.

Temalacatl.

Temalacatl: here were offered up gladiatorial sacrifice victims. Those here offered up in the gladiatorial sacrifice were a great number of captives. And thus were offered up in the gladiatorial sacrifice indeed all men [who] came from the lands about us, whom they slew as offerings there upon the stone of gladiatorial sacrifice. And for this he who had charge of them was the wolf man, who placed them on the gladiatorial stone. And when he had put the captive in his place, thereupon he offered him the pine club and he gave him a feathered staff. And then went one arrayed as an eagle or an ocelot to belabor him. He then struck [down] the captive, as if he warred against him. And here was he who was charged with the care [of the captive]; his name was Chalchiuhtepeua. And when the captive fell, thereupon the wolf man dragged him off, and [the priests] slashed open the breast of the captive. And he who slew him was named Youallauan; he opened [the captive's] breast. And when he slashed open the breast of the captive, thereupon they cast him down below. And this was done each year at the feast of Tlacaxipeualiztli.

Here Is Told in What Manner the Mexicans Made Offerings, and What They Made as Offerings in Their Temples.

Offerings.

Thus were offerings made: with food and with capes were offerings made, and with all kinds of living things—perchance turkeys, perchance birds; or capes. Or else whatever was newly formed—perchance maize, or *chia*, or flowers, or whatever [was newly grown].

And thus did the young [unmarried] women make offerings: Before dawn their mothers and fathers awoke them. So they went about making offerings of gifts carried in the palms of their hands—little *tortillas*, [which were] very small,—and thus they quickly proceeded to lay gifts before the devil; in bowls they carried them thus to present them [to the gods].

Only in the houses were the *tortillas* made. Thus did the young women make [their] offerings.

The Offering of Incense.

And thus was the offering of incense performed, with an incense ladle. It was made of clay, with [stones in its hollows making] a rattle. Then they laid live coals in the incense ladle. When these blazed up, then they filled it with *copal* incense, and then came forth before the devil, or else in the middle of the courtyard, where arose the brazier. [This] was made of clay.

And when they came up to the devil, then they dedicated the incense burner to the four directions, thus offering incense. And when they had offered [incense] to the four directions, then they threw [the incense and the coals] into the brazier. Here the *copal* incense lay smoking.

And thus was it done: the mothers and fathers likewise at dawn awoke the children, [whether] men[-children] or women[-children]; that they might offer incense quickly, they awoke them; that

The Casting of Copal [Incense].

And the casting of *copal* [incense] was thus done, when any weighty words were yet to be said, or a judgment was yet to be uttered: first one cast *copal* [incense] into the fire. [For] whoever was to speak [weighty words], here lay the *copal* in a gourd vessel. Or else the singer, before he was to sing, thus did: first he cast *copal* into the brazier, and then the singer began [to sing].

Copaltemaliztli.

Auh in copaltemaliztli ic muchioaia, yn jquac in tlein tlatolli ie mjtoz, aço tecutlatolli ie mitoz, achto contemaia in copalli, in tleco: in aqujn ie tlatoz, çan vncan mancq in copalli xicaltica: anoço cujcanj in ie cujcaz, ic peoaz, achto contema in copalli in tlequazco, njman ic peoa in cujcanj.

The Eating [Kissing] of the Earth.

[201 576] The eating [kissing] of the earth was thus done, when men came into any place: everyone kissed the earth, with one finger [touched to the ground and then to the mouth], either before the devil or else in front of the hearth.

[626] And thus was protested, thus was avouched one's word. When one put not much faith in [another's] word, thus he said unto him:

"If what thou sayest is true, do thou kiss the earth."

Whosoever it was then thus kissed the earth, and thus he bore witness to [the truth of] his words.

Tlalqualiztli.

In tlalqualiztli ic muchioaia, iquac in campa oalhujlooaia, muchi tlacatl ontlalquaia, ica in ce imapil, aço ispan diablo, anoço tlecujlixquac:

Here Are Told the Various Modes in Which Blood Was Shed and Offered up.

Sacrificial Slaying, &c.

Thus was performed the sacrificial slaying of men, when captives and slaves died, who were called "Those who have died for the god."

Thus they took [the captive] up [to the pyramid temple] before the devil, [the priests] going holding him by his hands. And he who was known as the arranger [of captives], this one laid him out upon the sacrificial stone.

And when he had laid him upon it, four men stretched him out, [grasping] his arms and legs. And already in the hand of the fire priest lay the [sacrificial] knife, with which he was to slash open the breast of the ceremonially bathed [captive].

And then, when he had split open his breast, he at once seized his heart. And he whose breast he laid open was quite alive. And when [the priest] had seized his heart, he dedicated it to the sun.

X796
785
782

The Drawing of Straws [Through Parts of the Body].

The drawing of straws was thus done, only upon days proper for [such] drawing of straws.

And indeed in all parts [of the body was it done] —perchance in one's ear, or, whoever willed it, one's tongue or one's thigh. And thus they pierced the flesh: with a thornlike obsidian point. And thus they then here drew a slender twig, or a straw; and thus they gathered the flesh with a cord, that there they might pass a straw [through it]; and thus all performed a penance.

And when slender twigs had been passed [through the flesh], upon the morrow the straws were swept up and gathered; and the straws were much bloodied. And this was done in the house of the devil, or along roads where devils lay.

The Offering of Thorns.

The offering of thorns was thus performed: they plucked green reeds and çac magney spines, and

X 796
782

A True [Relation] of Still Other Offerings with Which Similarly They Paid Honor to the Devil.

Hanging [an Object] over the Breast.

Thus was done the hanging [of objects] over the breast; thus was the tying with loose cotton thread: they tied [them] about the wrists and the necks of small children and [suspended on the cords], in small bags, *tomillas* made of green maize. Here [in the *calpulli*] they set forth these, on small jar-stands, and small earthen jars, and lifted the jars up by the ears, and with their hands went filling their bags with water. And when they had reached the twentieth day, when [it was the feast] known as Teotl eco, [that was] when they untied the feathered threads which they had about the small children.

[415]

[For] Pain.

And [for] pain, thus was done upon the feast of [the god] Acolmiztli: the small children were ornamented in feathers [applied to them]; in colored feathers, [set] everywhere on their bodies. And the old people similarly applied feathers on their stomachs, over their hearts, and upon their backs. Thus they set feathers upon them—so it was said—because then Acolmiztli would not bewitch them.

[302]

[784]

The Setting Out of the Children.

Thus was done the setting out of the children. They took all of them there to the house of the devil, and had in truth all the children dance before them, and made them drunk. Hence it was called the setting out of the children; for they had them all appear in the house of the devil.

The Act of Striping.

Thus was done what was named the act of striping: when mock battle was joined, the shield and

793

A True Relation of all Those Who Served in the Houses of Each of the Gods.

The Keeper of the Gods of the Mexicans.

Thus did the Keeper of the Gods of the Mexicans with his sleeveless jacket, his incense ladle and his pouch, that he might with them pay honor to the devil. And so did he keep watch that verily it was a matter of his being like the father of [those in] the priests' dwelling. He was like the ruler of the lesser keepers of the gods indeed everywhere.

And all the children were left in his care, that he might train them, that he might by words move them to live well. And whether men commanded, or were rich, or were leaders, or directed, all this was the charge of the Keeper of the Gods of the Mexicans.

And also this one commanded in the temples everywhere; he told the lesser keepers of the gods what they might do. And if perchance any should sin, much did the Keeper of the Gods of the Mexicans take heed of it.

The Keeper of the God of Uitznauac, Omacatl.

The Keeper of the God of Uitznauac similarly maintained usages, just as the Keeper of the Gods of Mexico maintained usages. Likewise he oversaw, in the priests' dwelling, that they trained the children well.

The Keeper of the Gods of Others.

The Keeper of the Gods of Others: his overseeing was similar to the overseeing of the Keeper of the Gods of Mexico. Because, in truth, he appointed to all how [those of the] priests' dwellings should oversee; how they should bring up the children, and train them; and, verily, the things which the lesser keepers of the gods everywhere should do.

Onse Tochtzin.

Onse tochtzin had as his charge that he should assemble the Centzontotochtin [singers]; even all of

Epcoaquacuiltzin.

Epcoaquacujltzin.

793 [805] The Epcoaquacuiltzin—behold what were his duties: when feasts should be celebrated, perchance when a new fifty-two-year cycle should start—verily, all feasts—all of them he announced; or when fire was laid. In truth, all that should be done, all things this man thus commanded and furthered.

In epcoaquacujltzin, inca yn jtequjuh catca: Yn iquac ilhujtl qujçaia, yn açe xiuhtzitzqujlo: in ie muchi ilhujtl, muchi ipã tlatoaia, injc tletemaloz in ie muchi muchivaz muchi ichoatl ic tlanavatiaia, ipan tlatoaia.

The Keeper of the Gods of Moloneo.

Moloncoteuhca.

The Keeper of the Gods of Moloneo also had this as his duty: In his charge were the paper, the incense, the [liquid] rubber, the black stain, and all which this one needed when [sacrificial victims] were to die. And he had in his charge the black stain with which was painted [the impersonator of the god] Chiconauecatl, and the incense ladle, the quail, and the black plumes with which [he who was arrayed in the likeness of] Chiconauecatl was feathered.

In moloncoteuhca, çan no ichatl itequjuh catca, ipan tlatoaia, in amatl in copalli, in vlli, in tlilli, in isujch itech moneguja in ichoatl in iquac miquja, auh in tlilli ic moçaia, in chicunavecatl yoan ipan tlatoaia in tlemaitl, in çolin yoan in ihujtl tlitic ic mopetonjaia in chicunavecatl.

The [Priest of] Cinteotl.

Cinteutzin.

The duties of the [Priest of] Cinteotl were that all things which were required be thus commanded, so that the paper, the incense, the [liquid] rubber,

In itequjuh catca cinteutzin çan isujch in ipan tlatoaia, ic tlanavatiaia, injc monechicoaia in amatl in copalli, in vlli in jiauhtli in itech moneguja xilo-

the sweet-smelling herbs should be gathered together which [the goddess] Xilonen needed when her feast was observed. And he arranged for all [things] and the incense-ladles which the temple needed when [the impersonator of] Xilonen died.

nen in jquac ilhujuh quiçaia, yoan muchi ipan tlatovaia, in tlemaitl in jtech monequja o calli in jquac mjquja xilonen. 793

The Keeper of the Gods of Atempan.

The Keeper of the Gods of Atempan—behold what were his duties. This one required, and hence commanded, that there should be gathered together the feathers, the eagle-down and the pointed eagle plumes, with which [she who was ornamented in the likeness of] Toci was adorned, when she died.

And this one cried out [summoning] the Huaxtec youths to do penances here at Atempan.

Atempan teuhoatzin.

In atempan teuhoatzin, izca in jtequjuh catca, iehoatl ipan tlatovaia, ic tlanavatiaia, injc monechicovaia ihujtl, in quauhtlachcaiutl, yoan in qiauhtevitztli injc mopotonjaia toci in iquac miquja

yoan iehoatl qujtzatziliaia in cuecuextecа in telpupuchtin; injc moçavazque vncẽ atempan. [203]

The Caretaker.

The Caretaker took charge of the songs of the devils, of indeed all the sacred songs, that none might do ill [with them]. Greatly was he concerned that they teach the sacred songs, and he cried [the summons] that the singers be gathered, or the chiefs, that they might be taught the songs.

Tlapiscatzin.

In tlapiscatzin qujmocujtlavjaia in jncujc Diablome in ie muchi teucujcatl injc aiac tlatlacoz, vel qujmocujtlavjaia, injc qujtemachtiaia in teucujcatl, yoan qujtzatziliaia injc monechicozque in cujcanjme anoço tetecutin injc qujmomachtizque in teucujcatl. [533] [203]

The Keeper of the Goddess of Zapotlan.

The duties of the Keeper of the Goddess of Zapotlan were similar to what were the duties of the Keeper of the God of Atempan; for he was concerned with, and commanded that there should be gathered together all the paper, the incense, the [liquid] rubber, and the sweet-smelling herbs which [she who was arrayed in the likeness of] Tzapotla tenan needed when she died.

Tzaputla teuhoatzin.

In tzaputla teuhoatzin, çã no ẽhquj in jtequjuh catca, in juhquj itequjuh catca: Atempa teuhoatzin, iehica ça no muchi ipan tlatovaia, ic tlanavatiaia, inic monechicovaia amatl in copalli, in vlli, yoan in jiauhtli, in jtech monequja in tzaputla tenan in iquac mjquja

The Keeper of the God of Tecanman.

The Keeper of the God of Tecanman was concerned that there should be torches, or bundles of resinous wood used as torches. And the charge of this one was that he should collect the red ochre, the black stain, and the foam sandals, the sleeveless jacket, and the bells which [the impersonator] of Xiuhtecutli, the old god, needed when he died.

Tecanman teuhos.

In tecanman teuhos iehoatl ipan tlatovaia in ocutl in tlepilli iez yoan iehoatl itequjuh catca, in qujnechicovaia in tlavitl, in thlli yoan in poçolcactli, in xicolli, in tzitzilli in jtech monequja xiuhtecutli, veuetcutl in iquac mjquja [373]

Ome Tochtli Tezcatzoncatl.

793 Ome tochtli Tezcatzoncatl: this one likewise was concerned with the sleeveless jacket, the bells, the foam sandals, the paper, the heron feather headdress, the pine flowers [as mentioned above]. Hence he commanded that all be assembled; that they gather together the offerings which [he who was ornamented like] Tezcatzoncatl would need when he died. This was done upon the feast of Tepeilhuitl.

Tezcatzoncatl vme tochtli.

In tezcatzoncatl vme tochtli, çan no ichoatl ipan tlatovaia in xicolli, in tzitzilli, in poçolcactli in amatl, in aztatzontli, in ocozochitl, ic tlanavatiaia injc muchi monechicoa in valcenqujcaz in ventli in jtech monequja tezcatzoncatl in iquac mjquja ipã in tepeilhujtl mochivaia.

Ome Tochtli Yiauhqueme.

Ome tochtli Yiauhqueme likewise was concerned with the paper, the *copal* [incense], the [liquid] rubber, and the foam sandals, the bells, the sleeveless jacket, the heron feather headdress, and the pine flower. Therefore he commanded that all that hath been mentioned be gathered, when they were needed, when [the impersonator of] Ome tochtli Yiauhqueme died. [This was] also upon the feast of Tepeilhuitl.

Vme tochtli yiauhqueme.

In vme tochtli yiauhqueme çã ic no ichoatl ipan tlatovaia in amatl, in copalli, in vlli, yoan in poçolcactli, in tzitzilli, in xicolli, in aztatzontli, in ocozochitl, ic tlanavatiaia injc monechicovaia in isquich omjto, iquac monequja in iquac miquja vme tochtli yiauhqueme çan no ipan in tepeilhujtl.

Ome Tochtli Tomiauh.

Ome tochtli Tomiauh: the duties of this one were [that] he be concerned with all things needed when [he who was bedight as] Ome tochtli Tomiauh died —the paper, the *copal* [incense], the [liquid] rubber, the bells, the sleeveless jacket, which have already been told of. [This was] also upon the feast of Tepeilhuitl.

X 796 **A True [Relation] of how They Served the Sun; and of how many Times Trumpets Were Blown During the Day and During the Night; and of how many Times Incense Was Offered.**

Each day, when the sun arose, quail were slain and incense was offered. And thus were quail slain: they wrung the necks of the quail and raised them dedicating them to the sun.

And they invoked [the sun], saying:

"The sun hath come forth—the shafts of heat, the turquoise child, the soaring eagle. And how he will go on, or how he may tarry [we know not]. Perchance something [ill] will be done his servants and vassals."

They said unto him:

"Work; perform the office [for us], O our lord."

And this each day was thus done when the sun rose, [as hath] been said.

And thus was incense offered four times during the day, and five times during the night: The first time [was] when the sun burst forth. The second time [was] when [it was] time to eat [the first meal]. And the third time [was] at midday; and the fourth time [was] when already the sun had set.

And at night, thus was incense offered: the first time, when it was dark; the second time, when it was time to sleep; the third time, when the shell trumpets were sounded; the fourth time, at midnight; and the fifth time, near dawn. And when it was dark, incense was offered and a supplication was made to the night.

[534]

It was said:

"The Lord of the Night, he of the sharp nose, hath unfolded, and we know not how his office will end."

X 796 785 And [his] first day came upon the day of the day-count [called] nani ollin, every two hundred and three days. And when the day had come, all did penances; all fasted for four days. And when they reached the day of the day-count, at noon, shell trumpets were blown, and straws were passed through the flesh to draw blood. And they cut the ears of little children lying in their cradles. And all the people bloodied themselves, and no supplications

were then made. But everyone drew blood; straws were passed through tongue or ear-lobe, and incense was offered. Everyone [did so]; none were negligent.

And there was the image of that one, [the sun, at a pyramid temple] called Quauhxicalli. There was erected his image, his image was designed as if it had the mask of a man [but] with [the sun's] rays streaming from it.[10a] His sun ornament was round, circled with feathers; surrounded with red spoonbill [feathers]. Here in his presence was the fasting done, and the passing of straws through the flesh, the laying of offerings, and the slaying of quail.

And upon his feast day, also many captives died, and these were also called "those who died in war." These went to the house of the sun and dwelt with the sun.

[793] A True [Relation] of what Was Accomplished and of the Works Which Were Done in the Houses of the Devils.

Inelcauca in neiehecolinli anoço tlatequjpanolintli in muchiouaia teupan in tlacateculocalco.

The Education of Men.

The priest who educated [the young priests] led them by the hand to the priests, to those who dealt blows, to those who guarded.

Tlacazcalilintli.

In teizcaltiaia tlenamacac, imac concaoaia, in tlamacazque, in tlavitequjnj, in tlapianj.

Admonitions.

Thus they admonished them, that they might lead good lives; that they might not waste time nor live lazily.

Temonotzalintli.

Ic qujnnonotzaia, injc vel nemjzque, in amo mavitizque, in amo tlatziuhtinemizque.

Sweeping.

[356] That they might sweep the courtyard of the temple, he cried out to all the little priests that they should sweep.

Tlachpanalintli.

Injc tlachpanazque, in teuirvalco qujntzatzilia in jzqujchtin in tlamacazcatepitzitzin injc tlachpanazque.

The Laying of Fires.

And he had them see to it that they should lay fires, that they should watch them, where they set in order the various fires. And everywhere in the [373] temple courtyard fires were laid; there perchance [even] ten rows [of them] burned—very many [of them].

Tletlalilintli.

Ioan qujncujtlavilitiaia, injc tletlalinque injc tlapialoia, vncan netencoia in tletl itla, auh çan novjian in tletlaliloia in teuirvalco, in tlequazco in vncan in vncã tlatlaia aço matlactecpantli cẽca mjiec.

Guarding During the Night.

Guarding during the night: they who were priests cared for [this]; it was the duty of those who were trustworthy.

In iovallapialintli.

In iovallapialintli iehoantin qujmocujtlavjaia, in tlamacehque, in jztlamatque intequjuh cẽca.

The Carrying of Wood.

[373] The carrying of wood. Thus they took care that fire should burn in the priests' dwelling: those who were very young priests gathered it—they who were not yet very prudent.

Quauhçaquilintli.

In quauhçaquilintli, injc tlapiaia in tlatlaia calmecac, iehoantin concuja, in tlamacazcatepitzitzin, in ãmmo cenca ixtlamati.

The Cutting of Thorns.

The cutting of thorns: they cut them who were priests not yet much experienced. These [were the ones] who took them.

Vitztequjliztli.

In vitztequjliztli, ichoantin cõtequja in tlamacazque in ziamo cenca ixtlamati, in qujnõtlacuixque. 793

The Gathering of Fir Branches.

The gathering of fir branches: likewise they who were priests secured them, and these were already experienced.

Acxoiaçaquiliztli.

In acxoiaçaquiliztli, çan no ichoantin conocuja in tlamacazq̃ auh ichoantin in ie ixtlamati.

The Blowing of Shell Trumpets.

The blowing of shell trumpets: this was the charge of those who were young trumpet-blowing priests; and [they were] experienced and of various sorts.

Tlatlapitzaliztli.

In tlatlapitzaliztli, ichoantin intequjuh catca, in tlamacazcatepitzitzin. youn in ie ixtlamati neneliohtivjia. [534]

The Dissolving of Black Coloring.

The dissolving of black coloring was the task of those [who were] the young blowers of shell trumpets. These dissolved the black stain, and everyone anointed himself with it. Verily all together put it on when they stained themselves; none failed [to do so]. And they dissolved it in the black stain canoe. And the black coloring was dissolved only at night, and all stained themselves at the moment of dawn.

Tilpatlaliztli.

In tilpatlaliztli, ichoantin intequjuh catca: in tlamacazcatepitzitzin, in qujpatlaia tilli, muchi tlacatl ic moçaia, vel mocemaqujaia injc moçaia, acan mocavaia: auh in qujpatlaia vncã in tillacalco, auh in tilpatlaloia, çan iovaltica, auh in nençaloia iquac in tlavizcalli ichoa. 793 386

782
626

A True [Relation] of how They Prayed to the Devils, and how Oaths Were Made.

When an oath was taken: when anyone made a vow [for] his children before the devils, he made vows in perchance two [temples] or in three of what he would cause to be done for the devils. Mayhap his young son had been struck [by sickness]; or, for whatever had befallen, when he made the vow, [he promised] that he would perform penances for them.

And also when an oath was taken, when anyone stated something, in order that he prove it, it was said [to him]:

"That thy words be proved, that thou shalt not lie, do thou kiss the earth."

When, thus, he kissed the earth who had stated something, he thus bore witness to his words, and that he not be held as a liar, he said:

"Well do the sun and the earth-goddess knew [the truth of this]. Now I kiss the earth [in token of it]."

Thus were oaths taken.

And if [it was] a supplication, it was done with these—the offering of incense, and sacrifices, and the kissing of the earth, and the offering of blood.

34. The translations here depended heavily upon Edward Seler's translation of the songs for this section. With Seler's meticulous notes, they may be found in his *Gesammelte Abhandlungen*, Vol. II; *Collected Works*, Vol. II, Pt. 4; or Sahagún (Bókondo ed.), Vol. V.

The songs are contained in the *Florentine Codex*, Sahagún comments concerning them: "Cantaban muy amiudo en, de los adoratorio al diablo: honrar aquendoqui, para honrar sus negocios: conforme a lo del santo Evangelio, que dice. Quiere honrar mal, aborrecer la bos: conforme a esto, estos tres cantaqui, en esta figura plumas, en bosque, o arcabuzo, llenos de muy exquisos hechos, para honrar sus negocios, desde al, y para adorandoqui en el, para en sus hallado: como hacen las bestias fieras, y las muy poderosas serpientes. Este bosque, o arcabuzo hechoso, son las cosas, que en estos tiempos el mesio, que se hizieron, y vemos, en su servicio: y como se vaiio dicipos y pudieron de su tiar, asi en los templos, como fuera dellos: los quales llamaban mucho oraçion, que dicen lo que quieres, y aprequenan lo que el mundo: y contrariaban solamente aquellos, o quieres el los enemigos. Es como muy amenguado, que la cosas, bosque, y arcabuzo, donde el dia de oy, este indolito adoratorio, se adorando, con las cosas, y pudieran, que tiene compañeros: y en la cosas, sin poderse entender, lo que en ello se trata, sino de aquellos que son entendidos, y acostumbrados, a este lenguaje. De manera, que inopinadamente se cosas, todo lo que el quiere, sea guerra, o paz, hace suyo, o consumido de ello, sin que de los demas se pueda entender."

538 O keeper of the god at Uitznauac, the [sacrificial] symbol hath been born. Day hath dawned, day hath come. The symbol hath been born.

O keeper of the god at Tocuillan, the [sacrificial] symbol hath been born. Day hath dawned, day hath come. The symbol hath been born.

Song of Tlaloc.

Mexico payeth her debt to the god. Paper streamers are raised at the four directions. Not now is it time to weep.

I [Tlaloc] have been formed. My god[ly image] hath been darkened with blood. The whole day hath been spent to bring rain in the court of the temple.

O my chief, my magic prince, truly thine is the maize: thou hast made the first fruits. Yet they pay thee not thy due.

Yet they pay me not my due, they please me not —my priests, my old priests, the ocelot serpents.

From Tlalocan, the turquoise house, came thy father Acatonal.

Go settle there at Poyauhtlan. With the mist rattle board is rain brought from Tlalocan.

O my elder brother, I shall go, for now is a time for tears.

Send me to the unknown land. His command came down; I spoke to him, to Tetzauhpilli. I shall go, [for] now is a time for tears.

Four years after hath it been brought to me. Then I knew not what thou saidst in the unknown land, the quetzal house, the land of plenty. Now he is as one who giveth bounty.

Go, settle there at Poyauhtlan. With the mist rattle board is rain brought from Tlalocan.

Behold the Song Chanted Every Eight Years when Water Tamales Were Eaten.

The flower of my heart lieth burst open, the lord of the night.

She hath come, she hath come, our mother, the goddess Tlaçolteotl.

Cinteotl is born at Tamoanchan, the flowery place, on the day ce xochitl.

Cinteotl is born in the place of rain and mist, where the children of men are made, where the jeweled fish are sought.

Day is here, it hath dawned. The varied spoonbills taste [flowers] where the flowers grow.

Here on earth, in the market place, thou appearest. I, the prince, I [am] Quetzalcoatl.

Let the trees flower in joy among the various spoonbills. Let the spoonbills [fly in joy]. Hear the words of our god; hear the song of the spoonbills. Shoot not at thy brother, the dead; use not the blow gun on thy brother.

I shall bring my flower, the maize flower, the white flower, from where flowers grow.

He playeth ball; old Xolotl playeth ball in the ball court of the sorcerer. Xolotl playeth ball—lord of the precious stones. See if Piltzintecutli resteth in the house of darkness, the house of night.

O Piltzintli, Piltzintli, with yellow feathers art thou pasted over. On the ball court thou placest thyself, in the house of night.

The tradesman, the tradesman Xochiquetzal, he who ruleth and governeth in Cholula. I fear in my heart, I fear in my heart that Cinteotl will not come. Let us go to the house of the bishop, the merchant, him of Chacallan. Blue ear plugs are his wares. Blue bracelets are his wares.

Account of What the Women Did There at the Temples.

Behold the life of the priestesses whom [their mothers] vowed [to service] there in the great temple.

In this manner they put them [into the temple], when yet very small—perchance after [they were] already twenty days or forty days [old]. And thus they took them; thus they left them there. Only they went carrying them; they went in the arms of their mothers. And then they went with their brooms which went filling the arms of the children; and they bore their incense ladles and *copal* [incense]. Not yet was there fire [in the ladle]; wherever the old priest so disposed, there would the incense ladle be used.

And when she had gone to dedicate the little girl, she thereupon took her away. She left there only the incense ladle and the *copal* [incense]. And this old priest then admonished the mother that she not lose her child through neglect, and that [the child] not fail to go to leave the brooms and the *copal* [incense], or wood shavings, every twenty days there at the tribal temple.

And when already discreet, when already a maiden, purely of her own will she went into the tribal temple. And purely of her own will she performed the veiling [ceremony] and also went taking with her the incense ladle and *copal* [incense].

And when she was a grown woman, if this priestess was asked [in marriage], and if the words were well spoken, and if the fathers and the mothers and the lords of the suburb agreed, thereupon were a number of things bought. They bought quail, and *copal* [incense], flowers, tobacco, and an incense ladle. And food was bought.

Then this priestess forthwith went to perform the veiling [ceremony] and took with her all that had been bought, as hath been told. And for her performing of the veiling [ceremony there was] a cape called *tlazquauhchtli*, which had many heads [worked upon it]. Thereupon they laid out a large cape, the *quauhchtli*. Then they set forth the offerings in a reed vessel; here they placed the gifts that they might

CONTENTS

THIRD BOOK

Page

First Chapter, in which is told how the gods had their beginning..... 1

Second Chapter, which telleth how they considered a god one named Titlacauan or Tezcatlipoca; even as an only god they believed in him.. 11

Third Chapter, which telleth—in which is related—[the story of] Quetzalcoatl, who was a great wizard; and of the place where he ruled, and of what he did when he went [away]..... 13

Fourth Chapter, which telleth how the glory of Quetzalcoatl came to an end, and how three sorcerers came to him, and what they did..... 15

Fifth Chapter, which telleth of another fraud which the sorcerer Titlacauan wrought 17

Sixth Chapter, which telleth how the Toltecs were angered because of the marriage of the daughter of Uemac; and of another work of sorcery which Titlacauan wrought 19

Seventh Chapter, where is related yet another act of magic which the sorcerer brought to pass so that the Toltecs died as they performed penances and danced..... 21

Eighth Chapter, which telleth of another act of magic which that same sorcerer wrought, whereby yet many more Toltecs died..... 23

Ninth Chapter, which telleth of yet another work of magic which this same sorcerer wrought, by which many more Toltecs perished..... 25

Tenth Chapter, which telleth of still another work of magic which this same sorcerer brought to pass, by which he cast a spell on Tula..... 27

Eleventh Chapter, in which is told yet another work of magic which this same sorcerer wrought, by which he mocked them, by which Tula was undone, and through which he slew not a few Toltecs..... 29

Twelfth Chapter, which telleth how Quetzalcoatl departed and left in flight when he went to Tlapallan, and of the many things which he did on the way..... 31

Thirteenth Chapter. Here are told the signs which Quetzalcoatl left upon the stone with his hands, when he rested himself there, where he sat.. 33

Fourteenth Chapter, which telleth how the vassals of Quetzalcoatl froze in the ice and died as they passed between Iztac tepetl and Popocatepetl; and of others of his exploits..... 35

Appendix to the Third Book..... 37

First Chapter, which telleth of the souls of those who died, who went there to the land of the dead; and of how they were buried..... 39

[Second Chapter]..... 45

Third Chapter, in which are recorded those who went to heaven..... 47

Fourth Chapter, in which it is related how the common folk left their sons in the young men's house, and what customs existed there in the young men's house, so that all were trained and reared..... 49

Fifth Chapter, which telleth of the customs which they practised and observed in order to live there, where they were reared and ripened [in] the young men's house..... 53

Sixth Chapter, in which are related the punishments and penances with which they chastised any youth when he drank wine..... 57

Seventh Chapter, in which is told how the chiefs and noblemen left their children there at the priests' house, and what manner of customs were observed at the place called the priests' house..... 59

Eighth Chapter, which telleth of the way of life which they kept in the priests' house, where lived or were reared five priests and [other] priests 63

Ninth Chapter: here is told how were established and chosen the high priests, the Quetzalcoatl priests, the first of whom was [named] Totec Tlamacazqui and the second Tlaloc Tlamacazqui; and [how] those whom they set up were especially wise and prudent..... 67

Del Principio de los Dioses

HERE BEGINNETH THE THIRD BOOK

NICAN PEOA INJC EY AMOSTLI.

173
539

First Chapter, in which it is told how the gods had their beginning.

How the gods had their beginning and where they began is not well known. But this is plain, [that] there at Teotihuacan, as they say, in times past, when yet there was darkness, there all the gods gathered themselves together, and they debated who would bear the burden,[1] who would carry on his back—would become—the sun. (This hath already been told elsewhere.) And when the sun came to arise, then all [the gods] died that the sun might come into being.[2] None remained who had not perished (as hath been told). And thus the ancient ones thought it to be.

Injc ce capitulo, vncan mjtoa in quenjn otzintique in teteuh.

TO VITZILOPOCHTLI the Mexicans paid great honor.

The following they believed of his beginning, his origin. At Coatepec, near Tollan, there always had dwelt and lived a woman named Coatl icue,[3] mother of the Centzonuitznaua. And their elder sister was named Coyolxauhqui.

And this Coatl icue performed penances there; she swept; she was charged with the sweeping. Thus

1. *Tlachpanli* (here probably a copyist's error) appears as *tlaxpanli* in the corresponding passage in the *Real Palacio MS.* Cf. *Aspd. supr.* in Alonso de Molina: *Vocabulario de la lengua mexicana* (Julio Platzmann, ed.; Leipzig: B. G. Teubner, 1880).

2. The story appears later in Sahagún's *Historia* (Book VII). In simple terms, the most usual version is told in Alfonso Caso: *La religión de los aztecas* (México: Imprenta Mundial, 1936), pp. 136. An interesting variant appears in Juan de Torquemada: *Segunda parte de los veinte i un libros rituales i monarquía indiana* (Madrid: Nicolas Rodrigo Franco, 1723), pp. 77-8; and another in "La leyenda de los soles" (in *Códice Chimalpopoca*; México: Imprenta Universitaria, 1945), pp. 121f.

3. Mother of the gods—that is, of the sun (Huitzilopochtli), moon (Coyolxauhqui), and stars (Centzonuitznaua)—according to Caso (*op. cit.*, pp. 38-9. He states: "*Yo honro siete cosas nace de ella nahgrenaceaue Huitzilopochtli es el nacimiento en que las estrellas, espiramadas por la Luna, pronuncian mandato porque no cesen en el prodigio de la concepción divina, y como el Sol-Huitzilopochtli nace de su vientre armado del cuyo de los y mata a la Luna y a las estrellas.*"

773
539

did she do penance at Coatepetl. And once, as she swept, feathers, as it were, a ball of feathers, descended upon her. Then Coatl icue snatched it up and placed it in her bosom. And when she had swept, [when] she came to take the feather [ball] which she had placed in her bosom,[4] she found nothing. Thereupon Coatl icue conceived.[5]

And when the Centzonuitznaua saw that their mother was already with child, they were very wrathful. They said: "Who brought this about? Who hath made her heavy with child? She hath dishonored and shamed us!"

And their elder sister, Coyolxauhqui, said to them: "My elder brothers, she hath affronted us; we must slay our mother, the wicked one who is already with child. Who is the cause of what is in her womb?"

And when Coatl icue learned of this,[6] she was sorely afraid and deeply saddened. And her child, who was in her womb, comforted her. He spoke and said to her: "Have no fear; already I know [what I shall do]."

When Coatl icue heard the words of her son, she was much consoled by them and her heart was eased of what had so terrified her.

And upon this, when the Centzonuitznaua had assembled for their deliberations, when they had made up their minds that indeed they would slay their mother because verily she had brought dishonor, much did they harden themselves; they were exceeding wroth. As if bursting her heart, Coyolxauhqui greatly incited and aroused the anger of her elder brothers, that they might slay their mother. And the Centzonuitznaua thereupon arrayed and prepared themselves for war.

And these Centzonuitznaua were like seasoned warriors. They wound and twisted [their hair]; they bound their hair about their heads [in warrior array].

And [there was] one named Quauitl icac, who was a traitor; that which the Centzonuitznaua said, he then told and brought as news to Uitzilopochtli.

And Uitzilopochtli said to Quauitl icac: "Watch well what they do, my dear uncle, and pay careful heed; for already I know [what I shall do]."

And finally, when [the Centzonuitznaua] were determined and of one mind in their deliberations

4. Sahagún's corresponding Spanish text has "un el seno juntó a la horaiga."
5. Quetzalcoatl is, in some stories, also said to have been miraculously born. See Caso (op. cit., p. 27), which, however, refers to a virgin birth.
6. Tezozomoc (op. cit., p. 43) says that one of Coatl icue's sons told her of the plot to kill her.

that they would put to death and dispose of their mother, they thereupon set forth. Coyolxauhqui led them. Much did they exert and drive themselves. They were in war array, which was distributed [among them]; all put in place their paper array, the paper crowns,[7] their nettles,[8] painted paper streamers, and they bound bells to the calves of their legs. These bells were called *oyoalli*. And their darts [had] barbed points.

Thereupon they set forth; they went in order, in columns, in armed display, moving with deliberation. Coyolxauhqui led them.

And Quauitl icac thereupon hastened to run up [the hill], that he might warn Uitzilopochtli. He said: "Already they are coming."

Then Uitzilopochtli spoke: "Watch well where they come."

Thereupon Quauitl icac said to him: "Already they are at Tzompantitlan."

Again Uitzilopochtli addressed him: "Where now do they come?"

Then [Quauitl icac] said to him: "Already they are at Coaxalpan."

Once more Uitzilopochtli called out to Quauitl icac: "See where they now come."

Then [this one] said to him: "Already they are at Apetlac."

Once again [Uitzilopochtli] spoke forth to him: "Where now do they come?"

Then Quauitl icac answered him: "Already they have come half way[9] up the slope of the mountain."

And Uitzilopochtli again spoke forth to Quauitl icac; he said: "Watch where they now come."

Then Quauitl icac said unto him: "At last they are coming up here; at last they reach here. Coyolxauhqui cometh ahead of them."

And Uitzilopochtli then burst forth, born.[10]

Then his array he brought forth with him—his shield [named] *teuecuelli*,[11] and his darts, and his dart thrower, all blue, named *xiuatlatl*. And in di-

7. Cf. Arthur J. O. Anderson and Charles E. Dibble: *Florentine Codex*, Book II, *The Ceremonies* (Santa Fe: School of American Research, Monograph No. 14, Part III, and University of Utah, 1951), p. 69.

8. See Fr. Bernardino de Sahagún: *Historia general de las cosas de Nueva España* (México: Editorial Pedro Robredo, 1938), Vol. III, p. 99, where medical properties of nettlesteel are mentioned.

9. Thelmapan: an use of *tlaca* in composition, see Angel María Garibay K: "Paralipómenos de Sahagún," *Tlalocan*, II (1946), p. 171.

All the place names given here (Tzompantitlan, etc.) are translated in Eduard Seler's *Einige Kapitel aus dem Geschichtswerk der Fray Bernardino de Sahagún über die Azteckischen Gottheiten* (ed. Camilla Seler-Sachs, Walter Lehmann, Walter Krickeberg; Stuttgart: Strecker und Schroeder, 1927), p. 256. In the original myth, possibly they were place names, which, in rituals, later came to be names of places around the Temple of Huitzilopochtli, and perhaps to recall the original account. Cf. Sahagún (Robredo ed., I, 181, and II, 382), where *Apetlac* and *Coaxalpan* are referred to not as towns but as places about the temple.

agonal stripes[13] was his face painted, with his child's offal, called his child's painting. He was pasted with feathers about his forehead and about his ears. And on his one thin foot, his left, he had the sole pasted with feathers, and he had stained both of his thighs with blue mineral earth, and both upper arms.

And one named Tochancalqui laid fire to the serpent *xiuhcoatl*[13] at the command of Uitzilopochtli.

Then with it he pierced Coyolxauhqui, and then he quickly struck off her head. It came to rest there on the slope of Coatepetl.[14] And her body went falling below; it went crashing in pieces; in various places her arms, her legs, and her body kept falling.

And Uitzilopochtli then arose and pursued the Centzonuitznaua, and went among them, and pounced upon them, and scattered them from the top of Coatepetl.

And when he had pursued them to the base, the foot [of the mountain], he took after them and gave them chase around the skirts of Coatepetl. Four times he pursued and followed them around. In vain they went about doing what they might against him; in vain they stood against him, striking about with their shields.[14a] No more could they do, no more could they achieve; neither could they take refuge. Uitzilopochtli quite overpowered them; he made them turn tail; he destroyed them in battle. He completely beated and ill-used them.

And not even now did he let them alone. He kept on. Much did they [then] importune him. They said to him: "Let this be enough!"

But Uitzilopochtli would not content himself with this. With force he hurled himself against them and took after them. And only very few fled his presence and escaped his hands. They went toward a haven to the south.[15] For indeed to that place these Centzonuitznaua[16] journeyed—the few who escaped the hands of Uitzilopochtli.

And when he had slain them, when he had spent his wrath, he took from them their vestments, their adornment, their paper crowns ornamented with feathers. He arrayed himself with these and took

13. Corresponding Spanish text: "*Una culebra, hecha de tela, que se llamaba xiuhcoatl.*"
14. See Pl. 2.
14a. Seler (*op. cit.*, p. 257) translates this passage thus: "*vergebens rannte sie ihr an mit ihren Schilden, vergebens wendete sie ihr Schlachten an, ordnete sie (vor Ahnende gegen ihn) auf ihre Schilde, sie konnten nichts machen, nichts nicht tun, konnten sich nicht rettet gegen ihre Gewaltigen.*"
15. Following *ximoloaya*, the *Real Palacio* MS has *ya la mamoaya ximoloaya*. The passage would then read: "This place is known as Ximoloaya, because indeed there these Centzonuitznaua journeyed. . . . ."
16. *Centzonuitznaua* probably *centzonuitznaua* is intended.

4: Sahagún M-5 (1529-1590) 1952 NU7 Aztec NU7

[them] for himself; he assumed [them] as his due, as if taking the insignia to himself.

And Uitzilopochtli was also known as an omen of evil; because from only a feather which fell, his mother Coatl ixue conceived. For no one came forth as his father.

This one the Mexicans cherished, by making offerings to him, and by honoring and serving him. And Uitzilopochtli rewarded him [who did so).[17] And this veneration was taken from there, at Coatepec, just as had been done in days of yore.[18]

Enough [of this].

SECOND PARAGRAPH, in which it is told how they did honor to Uitzilopochtli and thus worshipped him as a god.

And when the body of Uitzilopochtli was shapen, when they gave it form upon their feast day of Panquetzaliztli, they made it of a dough of amaranth, of fish amaranth seed, which is a spiny herb. They ground it; they pulverized it well; they crushed it into a powder and placed it in earthen vessels, as if it were an unguent—as if it were feather down. They rid it of *chicalote* seeds—they cast them aside as useless; they threw away all the *petzicatl* [bird] seed,[19] the black-seeded amaranth, and the siftings and the corrupted material, and other small rubbish. And this they cast out and toted away.

And when the amaranth seed dough was made, [it was] like pine [resin], like cooked maguey, like an unguent.

And upon the next day the body of Uitzilopochtli died.

And he who slew him [was] the [priest known as] Quetzalcoatl.[20] And [that] with which he slew him was a dart, pointed with flint, which he shot into his heart.

17. The manifestation, the *Red Tezcatlipoca* MS has manifestations, which is perhaps more logical.
18. See IV, 3.
19. *Chicalotl* and *petzicatl*: cf. Anderson and Dibble, op. cit., p. 63, no. 75—which identifies *chicalotl* with *xicalcomitl* or "fish amaranth"—and 59. Seler (op. cit., p. 278) translates the phrase *mitl chicaxtli mazatl in ceo tlamatz ihc Tlachpanaiaz*: for *chicaxtli* he has *Stachelmaus* (*Acanthomys cervicolor*)—spiny pouch.
20. See below (Appendix, Ch. 9).

796

He died in the presence of Moctezuma and of the keeper of the god, who verily spoke to Uitzilopochtli —who verily appeared before him, who indeed could make him offerings; and of four[21] masters of the youths, front rank leaders. Before all of them died Uitzilopochtli.

And when he had died, thereupon they broke up his body of amaranth seed dough. His heart was apportioned to Moctezuma.

And as for the rest of his members, which were made, as it were, to be his bones, they were distributed and divided up among all. Two [parts] were given the Tlatelulca; and [with these] two, which were as the fundament, two more were offered to the old men of the tribal temples of the Tlatelulca. And as much was given to the Tenochca. And afterwards it was divided up among them, to each in his order, each year when they ate it. [Each] year [those of] two neighborhoods[21a] ate it, and also the old men of two tribal temples. And when they divided up among themselves his body [made of] amaranth seed dough, [it was broken up] exceeding small, very fine, as small as seeds. The youths ate it.

And [of] this which they ate, it was said: "The god is eaten." And of those who ate it, it was said: "They guard the god."

Cf. also his enlightening discussion of *calpulli*, *op. Chapt.* VI-IX.

4: Sahagún M-5 (1529-1590) 1952 NU7 Aztec NU7

small capes, and then one small basket of grains of dried maize and one hundred dried ears of maize. Each man brought forth this.

This gave rise to much distress; it caused much anguish; it afflicted [them]. And some therefore fled; they therefore went elsewhere. And many flung themselves in the midst of war;[22] they cast themselves to their deaths, they who threw themselves into the wars.

And when already they were to give up their office, when already they were to finish [their penances], when already [they had served] one year, once again they set out, each one, three small capes, for buying pine sticks, and also three [more], for buying wood, from which a torch was made. All six together were needed when it came to pass that Uitzilopochtli was bathed, when the year ended.

And they bathed Uitzilopochtli at midnight. Before he was bathed, first all took part in a winding procession. And a man was arrayed as the likeness of Uitzilopochtli, [and] named Yopoch. Upon him was placed the adornment [of the god] which for one year remained upon him.

For the space of a year he wore [Uitzilopochtli's] adornment. Hence he fasted for a year, that he might wear his array. And he danced when he wore his raiment. One [dancer] went guiding him; one went ahead, before him, named master of the youths of Uitznauac. And all the [other] masters of the youths, the young seasoned warriors, and then all those who were intrepid in war, went following him, taking him in a winding procession.

At this time there was need of torches, pine torches. And when midnight had come, thereupon he went to be bathed. [The others] went lighting the way with torches, with hand-borne torches—with [torches] to light him held in the hand,—and with incense ladles held in the hand. They proceeded playing flutes for him. When they came to arrive at the Mist House, thereupon they set down the likeness of Uitzilopochtli.

And the keeper of the god then took up the water in a blue gourd vessel, and when he had drawn the water, he offered it before him. Then he took up the fresh, green reeds; four of them he put into the gourd vessel, and four times he took up water to bathe the face [of the image]; thus he bathed it.[23] And when

And after this they bore [the image] to Itepeyoc and set it in place. And when they had come to set it down, thereupon they went away; all dispersed. Then ended the fasting and penances of [those who had] for the year [been] eaters of the god.[34]

auh njman ie ic qujvica in itepeioc vmpa centlalia, auh in iõc ocontlalito, njman ie ic momoiaoa, vivilloa, ie vncan tzonquiça, in ineçaoaliz, in jntlamaceoaliz, in teuquaque ce xivitl.

785 FOURTH PARAGRAPH, in which are related other burdensome works which those did who received the body of Uitzilopochtli.

Still another group at this time began to fast in the year that they were to eat the god. They proceeded in this manner each year; thus they all continued giving [way to others]. They all went on exchanging [places]; there was mutual taking over and trading [of functions]. And likewise for the priests of the tribal temples there was fasting for a year. Great also was their suffering.

DEJC NAVJ PARRAPHO VNCAN motencoa in oc centlamantli tequjtl vel etic, in quichioaia in ichoantin qujceliaia in jnacaio Vitzilobuchtli.

Much from this did their affliction grow; great was their anguish, [which] filled their hearts and bodies. Verily, their misery surpassed [all else], since for one year there was to be fasting—since for a year they were to fast. [Each] man was to pass every night burning [wood] and providing light. Very much wood was consumed each night, as was the custom; and many broken up pine sticks, that torches might be lit. And they brought forth *chili*, tomatoes, salt, squash seeds, and water and food.

34. The meaning of the term *teipeio* may be taken as either image or impersonator. The context of this passage, in both the Nahuatl and Spanish versions, suggests the impersonator bore the image to the Mint House, where the keeper of the god (*teohua*) hoisted the image; either he hoisted also the impersonator, or the latter hoisted himself. The impersonator then took up the image.

therefore pledged the land, they made him leave it; they made him abandon it.

And when their fasting came to an end, much did they make merry. They bathed with water; they washed [their heads] with *amolli* soup.[28] And fruit was eaten—they made fruit *tamales*, and sauces. Or they slew and ate a dog, and they drank wine. Thus they showed that verily they were through with [their tribute]; that their works had fallen behind them.

For no longer a burden upon their backs was their fasting. [It was] as if [now] they could move briskly and with security; now they awoke [from their sleep] with joy and peace; they awoke tranquil. They had no offerings to make. In peace they might make their livings and find the means by which they might subsist either by fishing or in the *maguey* fields; or perchance they might frequent the market places in one town or another. No more did they live in bondage.

Enough.

28. See Fls. 5, 6.

Second Chapter, which telleth how they considered a god one named Titlacauan or Texcatlipoca; even as an only god they believed in him.

Of this one who was called Titlacauan they said that verily his were the heavens and the earth. All these in truth he made. And he gave to men all that which was necessary; that by which all live; that which can be drunk. He gave riches to men; he made them prosper.

And also of Titlacauan they said [that he was] invisible—like the darkness; [like] the wind.[1] When sometimes he called out to one, he spoke like a shadow. Verily, what one knew within one, [that] he knew. There was much calling out and praying [to him]. It was said to him:

"O protector of all, O giver of life, O Titlacauan, pity me, give me what is necessary for my life and for my strength—of thy gentleness and sweet essence. For now there is want; there is fatigue in gaining one's needs. [This] now there is upon earth. Take pity upon me; incline thyself to me. For I am thy orphan, I am poor, I am in need. Do I, perchance, serve thee in nothing? For I sweep, I sweep up rubbish, I lay fires there where I attend thee, there in thy poor house. Ah! Quickly slay me, trample me with thy feet! Ah! May my body come to rest!"

776
753

And also they said of Titlacauan that he gave woe and affliction. And men he burdened and scourged with plagues which were great and grave—leprosy, boils, dropsy, cancers, the itch, haemorrhoids, piles, chilblains,[2] and other sicknesses.

And when he laid these upon men, it was when he was wroth—that someone had forsaken his vows and promises, and that he had mishandled the fasting; that a man had lain with a woman [or] a

1. Tezcatlipoca, according to Caso (op. cit., p. 19), signified the universal spirit and was associated with the moon and all the earlier gods. Hence he brought fertilization, death, and destruction, and was associated with witchcraft. Always young (adolescent), he was regarded as patron of warriors, and sometimes called Yaotl (war). For this reason he was also associated with Huitzilopochtli. See also Edward Seler: Collected Works (J. Eric S. Thompson and Francis B. Richardson, eds.; Cambridge, Mass.: Carnegie Institution of Washington, 1960). Vol. 1, Pt. 2, p. 29, and Anderson and Dibble, op. cit., Book 1, p. 2.

2. Pedilanxiuhtli; possibly to be related to [illegible] (Simeon, Dictionnaire de la langue nahuatl ou mexicaine [Paris: Imprimerie Nationale, 1885]; Sahagún, Bulmalo ed., III, p. 186).

776
753 woman with a man, or that otherwise the fasting had been broken.[3]

776 And when the sick man suffered greatly, he prayed much to him, he cried out to him, he reached his
755 hand toward him.[4] He said to him:

"O Titlacauan, abate [my suffering] for me. May I do no more for thee—may I no longer hear nor serve [thee]! But if now thou shalt heal me, I vow to thee that I shall serve thee. If I shall gain something for myself, I shall not eat of it of a morning,[5] but do thou come to set it at thy foot. I shall bring it [to thee]."

And the sick man [who was] in sore straits, who might not recover, who could not now end [the suffering], who could now endure no more, sometimes berated [Titlacauan]. He said to him:

"O Titlacauan, thou sodomite! Now that thou takest thy pleasure [with me], slay me quickly!"

Some Titlacauan then healed, not angered by this. And some nevertheless then died for this.

776 And Titlacauan they also named Tezcatlipoca, and Moiocoiatzin, Yaotzin, Necoc iaotl, and Neçaualpilli. And hence was he called Moiocoia[tzin]: that which was in his mind, that which he thought of, he forthwith made. No one invented [anything for him]; none might prevent him. And in the heavens and all the earth around, whomever he wished he might endow; he would enrich him. And whomever he wished, he might afflict. And whenever he might be wroth, or might so wish, or when he was neglectful, he would bring down the heavens above us, and we should perish.

And Titlacauan, [who] extended throughout this
[778] world, was therefore besought, called to, and prayed to. And everywhere they set up his sanctuaries, shrines[6a] by the road, at crossroads. Everywhere he was awaited. And in the shrines they had for branches laid on the five days with which the twenty-day [month] ended.[6] Always they went to do this on each of the [five] days with which each month ended.

3. The corresponding Aztec text of this passage has [illegible] and [illegible], probably means for [illegible] and [illegible].
4. See Pl. 7.
5. In "Fragmentos de Sahagún" (p. 171, n. 7), Garibay notes that [illegible] may also be more literally rendered "[illegible]" or as "[illegible] *a mañana, así.*"
In this paragraph, we have read [illegible] as [illegible]; it might equally well be [illegible] (I shall dig).
So, "Yo [illegible]," in the corresponding Spanish. See, however, Molina, op. cit. ([illegible]), and Anderson and Dibble, op. cit., II, pp. 14, 162. The term [illegible] is variously translated.
6. See Pl. 8.

Third Chapter, which telleth—in which is related—[the story of] Quetzalcoatl, who was a great wizard;[1] and of the place where he ruled,[2] and of what he did when he went [away].

This Quetzalcoatl they considered a god. They all adored him as a god. He was prayed to in olden times there at Tula.[3]

And there was his temple, [which was] very tall and high; lofty and towering. Very many [were its] steps, extending in a multitude, and not wide; but each one, in truth, was very narrow. On each step, the sole of one's foot could not be extended.

There, it is said, he lay; he lay covered; and he lay with only his face covered. And, it is said, he was monstrous.

His face [was] like a huge, battered stone, a great fallen rock; it [was] not made like that of men. And his beard was very long—exceedingly long. He was heavily bearded.

And the Toltecs, his vassals, were highly skilled. Nothing that they did was difficult [for them]. They cut green stone, and they cast gold, and they made other works of the craftsman and the feather worker. Very skilled were they. These started and proceeded from Quetzalcoatl—all craft works and wisdom.

And there stood his green stone house, and his golden[4] house, and his coral house, and his shell house, and his house of beams, his turquoise house, and his house of precious feathers.

And [for] his vassals the Toltecs, nothing with which they dealt was [too] distant. Very quickly they could arrive whither they went. And because they were fleet, they were named *tlanquacemilhuime*.[5]

1. *Nauall.* Garibay (*op. cit.*, pp. 170, 171) translates the term as *sheer*, but suggests three possibilities for precise understanding of the word: (1) if *cual* is the root, a wizard-quadruped is implied; (2) if the root is *cualoni*, *cualoaz* (an archaic verb surviving in composition), then the meaning is *sheer* to suggest *or* pseudo-*figure*, or—following Molina (*cf. cuhcualoaqui, cuhcualoaliz, cuhcualloaltia, etc.*)—to fool; (3) if the root is the Maya *ua, uay, uaua*, then the meaning approximates *wisdom, witness, magic*. Garibay favors the second possibility.

2. Seler (*Einige Kapitel*, p. 268, n. 1) corrects *in canjn* to *in quanin*. This is perhaps more logical.

3. As a deity, Quetzalcoatl was wind god and prime god (Seler: *Collected Works*, Vol. I, p. 28), or morning star god, god of life, of the morning (Cline: *op. cit.*, p. 19). See also Anderson and Dibble, *op. cit.*, Book I, pp. 2-3.

Possibly the most elaborate account of Quetzalcoatl as the priest-chief of Tula is in the *Anales de Cuauhtitlan*, of which the best editions are Walter Lehmann's *Geschichte der Königreiche von Colhuacan und Mexico* (Stuttgart and Berlin: Verlag von W. Kohlhammer, 1938), and Primo Feliciano Velázquez's, in *Códice Chimalpopoca*. According to this source (pp. 42, ff., in Lehmann's *Geschichte*, and pp. 11ff. in Velázquez's *Códice*), he reigned at Tula for ten or twenty years following A. D. 873, having been born thirty years earlier of Chimalman, widow of Tomanah, who died A. D. 894. (See *supra*, Chap. I, n. 4.) Chimalman is said to have swallowed a green stone, and from it to have conceived. See also Tezozomoc, *op. cit.*, p. 88.

4. *Teocuitlatl*: gold *or silver*, according to Siméon (*op. cit.*). Specifically, '*teocuitlatl* (*or tlal cuapalqui*) is gold, and *iztac teocuitlatl* is silver. Cf. Molina (*op. cit.*, Spanish-Mexican section).

5. Those who walked the whole day without tiring, according to Sahagún (Robredo ed.), III, p. 114.

539

And there was a hill named Tzatzitepetl. Just so is it named today. It is said that there the crier stationed himself; [for] that which was required he placed himself there in order to announce [it]. He was heard clearly in distant places;[8a] everywhere was heard that which he said, the laws that were made. Swiftly all would come forth to learn what Quetzalcoatl had commanded the people.

And also they were very rich. Of no value were food and all sustenance. It is said that all the squashes were very large, and some were quite round. And the ears of maize were as large as hand grinding stones,[8] and long. They could hardly be embraced in one's arms. And the amaranth plants—verily, they climbed up them; they could be climbed. And also colored cotton prospered—bright red, yellow, rose colored, violet, green, azure, verdigris color, whitish, brown, shadowy, rose red, and coyote colored.[7] All different [colored cottons] were this way; so they grew; they did not dye them.

And there dwelt all [varieties of] birds of precious feather—the blue cotinga, the quetzal, the trupial, the red spoonbill, and all the different birds, which spoke very well; which sang right sweetly. And all the green stones and gold were not costly. Very much [of all this] was owned. And also chocolate—*xochicacaoatl*[9]—was made. In very many places there was chocolate.

And these Toltecs enjoyed great wealth; they were rich; never were they poor. Nothing did they lack in their homes. Never was there want. And the small ears of maize were of no use to them; they only [burned them to] heat the sweat baths.

And this Quetzalcoatl also did penances. He bled the calf of his leg to stain thorns with blood.[9] And he bathed at midnight. And he bathed there where his bathing place was, at a placed name Xippacoyan.[10] Him the fire priests imitated, and the [other] priests. And the priests took their manner of conduct from the life of Quetzalcoatl. By it they ordained the law of Tula. Thus were customs established here in Mexico.

Fourth Chapter, which telleth how the glory of Quetzalcoatl came to an end, and how three sorcerers came to him, and what they did.[1]

And at this time, Quetzalcoatl and all the Toltecs became slothful. And there approached and came, as evil sorcerers, three demons—Uitzilopochtli, Titlacauan, and Tlacauepan.[2] All three practised sorcery that they might bring ruin to Tula.

This Titlacauan began casting the spell. It is told that he turned himself into a little old man. He counterfeited and took the form of one who was much bent and whose hair was very white, very silvery. Thereupon he went to the home of Quetzalcoatl.

When he had gone there, he then said [to the retainers]: "I wish to see the chief, Quetzalcoatl."

Then [the others] replied to him: "Go hence, old man. The chief is sick. Thou wilt vex him."

Then the old man said: "Nay, verily I will see him; verily I must come to him."

They said to him: "So be it. Wait a little. We shall tell him."

And thereupon they informed Quetzalcoatl. They said to him: "My prince, an old man hath come to speak with thee, one who seemeth like a net, like a trap for thee.[3a] We would turn him away, but he wisheth not to go. He saith only: 'I will see the chief for myself.' "

Then said Quetzalcoatl: "Let him come; let him enter. For I have awaited him for some little time."

Then they brought him in to Quetzalcoatl.

Thereupon the old man came and said to him: "My grandson, my chief, how is thy health? Here is a potion which I have brought for thee. Drink it."[3]

And then Quetzalcoatl said: "Come here, O old one. Thou art spent; thou hast tired thyself. For some time I have awaited thee."

1. Quipiolque: probably quichiolque is meant.
2. Tezcatlipoca (Titlacauan), Huitzilopochtli, and Tlahuizcalpantecuhtli, according to Lehmann (op. cit., p. 79). Torquemada (op. cit., p. 77) says that Tezcatlipoca descended from heaven by a rope of cobwebs; changed himself into an owlet during a game of checkers with Quetzalcoatl; drove him from Tula; and pursued him from city to city, and finally to Cholula.
3a. *Amanaz* sic may be a copyist's error. We have follow Angel María Garibay, *Llave del náhuatl* (Otumba, México: s.p., 1940), pp. 91, 125.
3. See Pl. 11.

539

And then the old man replied to him: "My grandson, how, in sooth, is thy health?"

Then Quetzalcoatl said to him: "Verily, much do I ail in all parts. Nowhere am I well—my hands, my feet. In truth, my body is tired, as if it were undone."

And then the old one said to him: "Here is the potion, good, soothing, and intoxicating. If thou shalt drink of it, it will relieve and heal thy body. And thou shalt weep; thy heart will become troubled. Thou shalt think upon thy death. And also thou shalt think upon where thou shalt go."

Then Quetzalcoatl said: "Where am I to go, old one?"

Then the old man said to him: "Yea, thou shalt go there to Tollan-Tlapallan. A man there standeth guard, one already aged. Ye shall consult with each other. And when thou shalt return here, thou shalt again have been made a child."

On this, Quetzalcoatl was [much] moved. And the old man once more said: "Be of good cheer. Drink the potion."

Then Quetzalcoatl said: "Old man, I will not drink of it."

Then the old man said to him: "Drink of it; thou shalt feel a need [for it]. Nay, only place [some of it] before thee [as] thy [small] portion [in case thou feelest] thy desire [for it].[4] Taste only a little of it."

And Quetzalcoatl then tasted a little, and afterwards drank heartily of it.

Then said Quetzalcoatl: "What is this? It is very good. The sickness is now abated. Where were the pain? No longer am I sick."

Then the old man said: "Drink of it once again; the potion is good. Thou will thy body gain strength."

And as soon as he had once more drunk of it—all,—then he became sotted. Thereupon he wept, and greatly was he moved. Thus, at this time, was Quetzalcoatl aroused; his heart was quickened. No longer could he forget what had happened, but went on reflecting, realizing [that] indeed the devil had tricked him.

And the potion which [the old man] had offered him, it is told, was white wine. And it is said that this [wine] was made of the sap of the maguey called *teometl*.[5]

4. In Seler (*Einige Kapitel*, p. 273) and in Angel Maria Garibay K. (op. cit., p. 130), *chocoltiz* and *cocoltiz* are transcribed as *chocoltiz* and *cocoltiz*. The present version follows, however, both the *Real Academia MS* and the *Florentine Codex*.

5. The medicinal qualities of *teometl* are described in Sahagún (Dibble ed.), Vol. III, p. 258.

539

Fifth Chapter, which telleth of another fraud which the sorcerer Titlacauan wrought.

And behold another thing which Titlacauan did, thus casting a spell. He took the form and played the part of a stranger.[1] He walked about [with virile member] hanging [uncovered], and sold green *chilis*. He went to sit in the market place, before the palace entrance.

And the daughter of Uemac[2] [was] very fair. Many among the Toltecs desired her and sought her, that they might marry her. But to none would Uemac listen. He gave her to no one.

And this daughter of Uemac looked out into the market place and saw the stranger with [virile member] hanging [uncovered].

And when she had seen him, she went into the house. Thereupon she sickened; she became tense and inflamed [because of] her desire of the stranger's member.

And Uemac then learned that his daughter was sick. He said to the women who guarded her: "What hath happened? What hath she done? How began that which hath inflamed my daughter?"

Then the women who guarded her said to him: "It is he, the stranger who selleth green *chilis*. He hath inflamed and vexed her. Thus [it] began; thus sickness seized her."

And Uemac, the chief, thereupon commanded and said: "O Toltecs, let the green *chili* vending stranger be sought out; [let him] appear [before me]."

Thereupon was he sought everywhere. And when

njman ie ic tlatemolo cẽmanaoac: auh in ipuac aiac

1. The corresponding Spanish text has: "*se holgaje, y parecia, como en grande fornicio, que se llama mayor.*" In the Bulmarde edition (Vol. III, pp. 138, 141, 140) the verbs *mayor* and *mocoloaz* are given as equivalent. See also Seler (*op. cit.*, p. 274, n. 1), who refers to him throughout as a Huasteca (*huastecal*).

2. Reigard A. D. 994-1070, according to Lehmann (*op. cit.*, p. 42). Torquemada (*op. cit.*, p. 48) has him contemporary with Quetzalcoatl—"*mayor en la temporal era al que generaba en Tolan, llamado Huemac; en la espiritual, y Sacerdotica era Quetzalcoatl era mayorem, y verum Pontifex Maximus.*" Remapche de Alva Tezozomoc, in *Histoire des chichimèques ou des anciens rois de Tezcuco* (M. Tezozom-Comparon, ed.; Paris: Arthur Bertrand, 1840), Ord. I, p. 6, identifies one with the other. Dávid Chavero, in *Ancient Cities of the New World* (tr. J. Gamino and H. S. Cuming; New York: Hyperion, 1887) says the same. So does Paul Kirchhoff ("Los pueblos de la historia toltecas-chichimecas," *Revista mexicana de estudios antropológicos*, IV (1940), pp. 97—Huemac), citing Brinkmann, *Cinco historiadores*, I, 19-20) although the *Historia tolteca-chichimeca* makes him a child adopted by the Chichimecs (p. 79). Of Quetzalcoatl, Torquemada says: "*Un rey que los llamaron la gente Huemac, porque que fue personaje que tuvo en qu'El unió autoridad eclesiástica, El imperioso así mesmo con un rocher consumo que de la cite mesilla.*" (See Chapa. xii, xiii.) Citing Brinkmann, p. 1, col. 1, Tezozom-Comparon says Huemac was an astrologer and sage who led the Toltecs and wrote the *Tezozomoli*, a work dealing with the history, genealogy, moral principles, religious beliefs and ceremonies, philosophy, astrology, agriculture, and prophecy of the future. He died aged more than 300 years (p. 6, n. 1).

Commenting on the *Anales de Cuauhtitlan*, Seler (*Collected Works*, Vol. III, Pt. 2, pp. 16-17) states that by the time of Huemac, the priestly office was occupied by a priest chief Quetzalcoatl, and separated from the civil office, held by Huemac. This passage contradicts the history of Huemac, which may also be found in Lehmann's *Geschichte der Königreiche von Colhuacan und Mexico* de la Velázquez's *Códice Chimalpopoca*. The text of this document, however, states that Huemac was a successor of Quetzalcoatl (see *Códice Chimalpopoca*, pp. 12 ff).

539

no one came forth, thereupon the herald cried out from Tzatzinpetl. He said: "O Toltecs, [if] perchance ye see the green *chili* vending stranger, bring him here. The chief seeketh him."

Thereupon they looked and went everywhere; they went scattered through Tula as they looked. And when they had tired themselves and seen him nowhere, then they came [back] to tell the chief that verily nowhere could they see him.

And afterwards [the stranger] appeared of his own will in the same place where he had [formerly] come to sit when first he was seen.

And when he had been seen, then they went in haste to tell [the chief]. They said: "The stranger hath appeared."

Then Uemac said: "Let him come at once."

Then the Toltecs quickly went to seize the stranger. They brought him before the chief.

And when they had brought him, thereupon the chief said to him: "Where is thy home?"

Then [the other] replied to him: "I am a stranger. I sell little *chilis*."

Then the chief said to him: "Where hast thou been, stranger? Don thy breech clout; cover thyself."

Then [the stranger] replied to him: "Nay, but to this manner are we accustomed."

And the chief then said to him: "But thou hast afflicted my daughter. Thou art the one who must heal her."

Then [the stranger] said to him: "My dear stranger, my dear lord, this may not be. [Rather] slay me, kill me, let me die. What sayest thou to me? I am not the only one who selleth green *chilis*."

And then the chief said: "Nay, thou shalt heal her. Have no fear."

And thereupon they arranged his hair and they bathed him. Then they anointed him, they gave him a breech clout and girt him with it.

And when they had arrayed him, thereupon the chief said to him: "Look upon my daughter there where she is guarded."

And when he went there, then he lay with her, and then the woman was well. Later [the stranger] became the chief's son-in-law.

18

Sixth Chapter, which telleth how the Toltecs were angered because of the marriage of the daughter of Uemac; and of another work of sorcery which Titlacauan wrought.

And upon this, the Toltecs jested about [Uemac]; they mocked him and spoke in malice of him. They said: "And so the chief hath taken a stranger as son-in-law!" Thereafter the chief summoned the Toltecs; he said to them: "I have heard that jests are made of me, that already I am laughed at, for I have made the stranger my son-in-law. And this [shall ye do]—by deceit abandon him [while fishing] at Çacatepec and Costepec."

And thereupon the Toltecs announced war; they all set out. Thereupon they went, that they might leave the son-in-law [to his fate].

And when they had gone off to war, thereupon they planted [apart]¹ the stranger and all the dwarfs and cripples.

When they had planted them [apart], thereupon the Toltecs departed, to capture men—to take men from their foes, the Costepeca.

And the stranger said to all the dwarfs and cripples: "Have no fear. Here we shall destroy them; here, by our hands, they will meet their doom."

And after this, thereupon the enemy took after the Toltecs. They thought to themselves that [the foe] would there slay the stranger, from whom in this manner they went, leaving him tricked, leaving him to die.

And upon this they hurried to inform the chief, Uemac. They said to him: "Lo, we have gone, abandoning the stranger, who was thy beloved son-in-law."

And Uemac rejoiced exceedingly, for he thought that [his death] was fact. For he was ashamed of the stranger whom he had made [his] son-in-law.

And this stranger, when they had gone leaving him abandoned in battle, when their foes, the Costepeca and the Çacatepeca had already come up, thereupon commanded the dwarfs and the hunchbacks, and said to them: "Pay good heed! Have no fear!

1. Thinner literally, bury or place in the ground. Possibly a figurative meaning may be assumed.

539

Be not cowards! Lose not heart! [For] already I know that ye will take them all captive, that in some manner we shall slay all of them!"

And when their foes came upon them and fell upon them, then they verily attacked and trampled over them. They slew them; they brought ruin on them; they destroyed them. Multitudes without number they slew of their foes.

And when the chief heard of it, he was greatly bemused and saddened. Upon this he summoned the Toltecs and said to them: "Let us go to meet our beloved son-in-law."

And the Toltecs then surged and burst forth. Thereupon they accompanied the chief; they went dispersed about him; they went circling him, to meet [the stranger]. The Toltecs took their panoply [with them]—the quetzal feather head device, and the turquoise mosaic shield. When they reached him, thereupon they gave and presented him the quetzal feather head device and the turquoise mosaic shield —all their array [which] they had [with them].

With [this] they proceeded dancing; they came dancing the captives' dance; they came bearing [the array] on their backs. They came singing in his honor; the song came forth resounding and reëcheoing. They came blowing flutes in his honor; the shell trumpets roared and rang out. The shell trumpets approached, growing in sound.

And when they went to reach the palace, then they pasted the stranger's head with feathers, and they anointed him with yellow paint. And his face was spread with a red unguent. And all his friends were thus adorned.

And then Uemac said to his son-in-law: "Lo, now are the hearts of the Toltecs satisfied that thou art my son-in-law. Thou hast done well. Be received on this sail. Rest thy feet."

Seventh Chapter, where is related yet another set of magic which the sorcerer brought to pass so that the Toltecs died as they performed penances and danced.

A second work of sorcery this demon [wrought]: When he had been painted with yellow feathers, when he had bested [his enemies], he then brought it about that they should dance and sing, that they should intone a song.

Thereupon the herald made his cry, from the summit of Tzatzitepetl; he cried out to and informed those in all the world over. Verily everywhere they heard the cry of the herald. And very swiftly all came [to Tula].

And when this was done, then [the sorcerer] went there to Texcalpan. And everyone, all the vassals, went [with him]. And when all the youths and maidens had gathered together, they could not be counted; they were very numerous.

Thereupon the demon began to sing. He sounded the drum; he beat his ground drum. Thereupon all danced; they went as if leaping; all grasped hands; [or] took hold of each other from behind. With much contentment was it sung; [the sound] of the song resounded, and rose and fell.

And the song which was chanted [was] only [one] which he then invented.

And when he intoned the song, right then they answered it. From his lips they took the song.

And the singing and dancing began at dusk. And when it ceased, [it was] midnight.

And as all danced, [as] the movement was vibrant and most intense, very many then fell on the crags in the canyon. All died there, and then were turned into rocks.

And [as for] the others at the craggy canyon, the demon then broke the bridge. And the bridge was of stone. Forthwith all fell there where they crossed the water. All turned into rocks.

And how this was done, not that did the Toltecs understand. It was as if they were benumbed.

4: Sahagún M-5 (1529-1590) 1952 NU7 Aztec NU7

Eighth Chapter, which telleth of another act of magic which that same sorcerer wrought, whereby yet many more Tolteca died.

Behold yet another [act of sorcery] which the demon brought to pass.

It is said that once upon a time he took the form of a valiant warrior. He commanded the herald, the crier, that he should cry to the whole world that they come hence.

The crier said: "Let all men come! Let all the vassals come here! Ye shall go there to Xochitlan. The floating gardens will be harvested."

Thereupon came all the vassals. They came to the flower garden. (And as for naming it Xochitlan: they say it was the flower field of Quetzalcoatl.)

And when the Tolteca had come, gathered and massed together, thereupon the brave warrior slew them; he smote them; he beat the backs of their heads; in sooth, many [of them], without number, died at his hands. For he slew them.

And the rest of them, who indeed fled running, who were in headlong flight, went fleeing from his hands. As they went off, [seeking to] escape, as they ran, they injured one another and there they died. And still others trampled and crushed one another. All died there.

539 **Ninth Chapter, which telleth of yet another work of magic which this same sorcerer wrought, by which many more Toltecs perished.**

Behold still another act of sorcery which the demon did. He came to seat himself in the middle of the market place. He called himself Tlacasepan or Cuexcoch[tzin]. There he caused to dance [a figure] like a child. (They say it was Uitzilopochtli.) In his hand he held him as he made him dance.

And when the Toltecs saw this, thereupon they crowded toward him; they stumbled toward him in order to see it. Very many men were there trampled and died in the press as [the others] crushed them to death.

And when thus many times it came to pass that large numbers died in this way, as they looked while he made [the figure] dance, this same demon[1] said, with shouts, "O Toltecs, what sort of sorcery is this? Is it not an omen of evil that one is made to dance? As for this one, let him die; let him be stoned!"

Then they stoned him. He fell under the stones. And when this was done, [his body] thereafter stank; it smelt quite frightful; in truth, it wounded the head. And wheresoever the wind carried the stench, there the common folk died.

And when already very many men had thus died of its fumes, thereupon to the Toltecs this same demon said: "Let this dead one be cast away; let him be thrown out. For already his odor destroyeth [men]. Let him be dragged away."

And the Toltecs thereupon put a rope about [the body] and then [sought to] drag it away.[2] And now when they tried to heave it, they could not move it. It was very heavy—this, to which at first they had paid little heed, of which they had thought so of little import.

Then a message went out, and the herald said: "Let all men come here! Bring here your heavy ropes that ye may go and cast away the dead one."

And when the Toltecs came to gather together, thereupon they fastened the dead one with ropes.

1. Cuexcoch, in the Aztec text, is probably meant to be diminutive.
2. See 31, 32.

539 Then the Toltecs murmured; they said to themselves: "O Toltecs, along with it! Let it be pulled!"

But they could not then raise it; they could not move it. And when one of the ropes broke, then died all. As many as extend.d along the rope tumbled; they fell all mingled together, and then died.

And when they could in no way drag it, when they could not approach it, thereupon the demon said to the Toltecs: "O Toltecs, he hath need of his song."

Thereupon he chanted the song for the Toltecs. He intoned: "Drag away our log, Tlacatzepan the demon."

And as they chanted, forthwith they thus made the dead one move;[3] they came forward with it; they proceeded shouting. When a rope [again] snapped, then on all of them the log fell, so that it ran over them. And many were indeed crushed.[4] So were they crushed that thus they died.

And when all the rest who had gone to cast away the dead one, Tlacatzepan, thereupon turned back, it was as if they paid no heed to all that had been done to them. No longer did they consider it an evil omen; [they were] as if besotted.

3. Possibly the Aztec should have read *ocelinque* rather than *celinque*.
4. Cor. In the Aztec text, should probably be *pan*.

Tenth Chapter, which telleth of still another work of magic which this same sorcerer brought to pass, by which he cast a spell on Tula.

Behold also how the devil brought evil to Tula.

It is said that a white kite, with wounded head pierced by an arrow, flew by, passing to and fro over the Tolteca, not far [above] them. It kept nearing the earth as it flew back and forth. They saw it clearly as they stood and lingered looking upward.

Behold too yet another act of sorcery which was taken as an evil omen for the Tolteca. It is said that a mountain, called Çacatepetl, burned. By night, it was evident from afar how it burned. The flames rose high. When the Tolteca saw it, they became very restless; they raised their hands to heaven; there was great anxiety. All cried out, all shouted together. No longer was there tranquillity; no longer was there peace. And when they saw this omen of evil, they said: "O Tolteca, now is all in truth going [from us]; already the power of the Tolteca goeth. Yea, we are forsaken. What shall we do? Whither shall we go? O unhappy we! Let us take heart!"

Behold yet another act of sorcery. It is said that stones rained on the Tolteca. And when the stones rained, then a large sacrificial stone fell from the heavens; there at Chapolteqecuitlapilco[1] it came falling down. And afterwards a little old woman lived there. She sold [paper] flags; she walked about saying: "[Here are] your little flags." And any desired to die said: "Buy me one," and thereupon went where the sacrificial stone was. None asked: "What now dost thou do?" They were as if lost.

539 **Eleventh Chapter, in which is told yet another work of magic which this same sorcerer wrought, by which he mocked them, by which Tula was undone, and through which he slew not a few Toltecs.**

Behold also the manner in which sorcery was practised against the Toltecs.

It is said that the food soured—very bitter did it become. It could not be placed in one's mouth; none of the Toltecs could eat the food. In truth, so were the Toltecs mocked.

And an old woman (they said and considered that it was the devil who appeared and took the form of an old woman) came to sit there at Xochitlan. There she toasted maize. And the maize which she toasted spread its fragrance over all the region. In truth it expanded and spread among all who dwelt [there]. All over the land was spread the odor of the toasted maize.

And when they smelled the toasted maize, the Toltecs found [the smell] good; they found it satisfying and pleasing. And when they smelled it, quickly they came here and swiftly, reaching here in only a very few moments.[1] ([For] it is said that the Toltecs thought no place distant; they thought nowhere [too] remote. Even though they might live far away, swiftly they arrived, and also [so] rapidly [returned] whence they had come.)

And then, as many as had gathered together she slew and destroyed—all. Not then might they make their return. A great mockery was made of the Toltecs, since the devil had slain very many of them. It is said that in sooth he made sport of the Toltecs.

539

Twelfth Chapter, which telleth how Quetzalcoatl departed and left in flight when he went to Tlapallan,[1] and of the many things which he did on the way.

And still many more acts of sorcery were done to the Toltecs in order to destroy Tula.

And when these things happened, Quetzalcoatl was now troubled and saddened, and thereupon was minded that he should go—that he should abandon his city of Tula.

Thereupon he made ready. It is said that he had everything burned—his house of gold, his house of coral; and still other works of art, the marvelous and costly things, all [of these] he buried, he hid there in treacherous places: either within the mountains or in the canyons.

And, moreover, the cacao trees he changed into mesquites. And all the birds of precious [feather]—the quetzal, the blue cotinga, the red spoonbill—all [these] he sent away beforehand. Taking the road before him, they went toward Ananac.[2]

And when this was done, then he set forth; thereupon he followed the road.

Then he came to arrive at a place [called] Quauhtitlan. A very thick tree arose [there], and very tall. He stood by it. Then he called for his mirror. Thereupon he looked at himself; he saw himself in the glass and said: "Verily, now I am an old man." Then he named [the place] Uevequauhtitlan.[3] And then he cast and hurled stones at the tree. And as he stoned it, [the stones] remained firmly encrusted and affixed to the great tree. Always thus have they been visible. Thus are they seen; beginning at the foot, they rise there to its top.

And as Quetzalcoatl followed the road, they went blowing flutes for him.

Once more he came to rest at another place. Upon a stone [Quetzalcoatl] rested himself. He supported

Thirteenth Chapter. Here are told the signs which Quetzalcoatl left in place upon the stone with his hands, when he rested himself there, where he sat.

And as he supported himself by his hands on the rock, he left deep imprints, as if [it were] on mud [that] he had planted the palms of his hands. Likewise his buttocks remained well marked on the rock where he was. Verily they are [now] visible. Because of the hollows, [this place] was named Temacpalco.

And then when he arose he came to reach a place name Tepanouyan, [where] there was water. A river burst forth [which] was very wide and long. [Quetzalcoatl] laid stones and made there a bridge. Then he crossed over on it, and so it is named Tepanouyan.[1]

And once more he set forth and then came to reach another point, a place named Coxapan. And when he was there, devils sought to turn him back. They tried to send him back and stop him.

They said to him: "Where dost thou go? Where art thou bound? Why goest thou now leaving the city? To whom dost thou go leaving it? Who will perform the penances?"

Then Quetzalcoatl said to the demons: "Indeed, in no way can [anyone] force [me]; for I must go [on]."

Then the demons said to Quetzalcoatl: "Whither goest thou?"

Then Quetzalcoatl said to them: "I go there to Tlapallan, for I go to learn [my fate]."

And then they said to him: "What wilt thou do?"

Then Quetzalcoatl replied: "I am called hence. The sun hath called me."

Then they said to him: "It is well. Go, leaving all the works of craftsmanship."

Then he left all the arts—the casting of gold, the cutting of precious stones, the carving of wood, sculpturing in stone, the knowledge of the scribes, the art of feather working. All [these] they wrested from him by force; they made him abandon all; they seized all from him.

And when this was done, Quetzalcoatl thereupon cast his jewels into [a spring of] water, and then they

103

were swallowed up. Therefore he named that place Concaspan which now is called Coaspan.[2]

And thereupon he moved on and came to reach another point, a place named Cochtocan. And there a demon then came forth to meet him.

He said to him: "Whither goest thou?"

Then [Quetzalcoatl] said: "It is there to Tlapallan that I go, to learn [my fate]."

Then the demon said to him: "It is well. Drink this, the wine which I have brought here."

Quetzalcoatl said: "Nay, it may not be that I drink, even though it might be but little that I taste."

Then once more the devil said to him: "Verily, it may not be that thou shalt not drink nor taste of it. For no one do I give leave, or permit, to depart whom I give no wine and [not] make drunk and besotted. So do [as I bid thee]; be of good cheer and drink it."

Quetzalcoatl then drank the wine with a drinking tube.

And when he had drunk, he quickly fell asleep in the road. He lay thundering as he slept, resounding a great distance as he snored.[3] And when he awoke, thereupon he looked to one side and the other. He looked at himself, and arranged his hair. Then he named the place Cochtocan.

4: Sahagún M-5 (1529-1590) 1952 NU7 Aztec NU7

Fourteenth Chapter, which telleth how the vassals of Quetzalcoatl froze in the ice and died as they passed between Iztac tepetl and Popocatepetl; and of others of his exploits.

Then once again he set forth and came to climb between Popocatepetl and Iztac tepetl.[1] He led all the dwarfs and hunchbacks, his servants. It snowed upon them, and there they froze; they died of the cold.

And Quetzalcoatl thereupon was greatly moved and wept to himself. And he sang much to himself [as] he wept and sighed.

Thereupon he looked at a distance to another white mountain, named Poyauhtecatl.[2] Again he set forth, making the rounds of all places, everywhere passing through the villages. And so, they say, he set down many of his signs, by which he is known.

In another place it is said that he took his pleasure on a mountain. He came sliding down it, to its foot;[3] he came bouncing down it.

And elsewhere he planted in the ground *magueys* fibers.[4] At another place he built a ball court, all of stone. And in the middle of it, where the line was, the earth lay open, reaching deep; for it was thus pierced. And elsewhere he shot, as an arrow, a *bombax ceiba* tree, [shooting it] likewise into the midst of [another] *bombax ceiba* [so that one] rested piercing [the other]. And elsewhere he built a house all underground at a place named Mictlan.[5]

And elsewhere he set up a huge rock.[6] It is said that one might move it with his little finger; easily it swayed; from side to side it would teeter. And it is said that when many men pushed it, then it would not move, even though many would try hard. [If] they sought to move it, they could not budge it.

And there were many more things which he did in all the villages. And it is said that he named all

the mountains. And in all places he gave all the names here.

And when he had done these things, then he went to reach the sea coast. Thereupon he fashioned a raft of serpents. When he had arranged [the raft], there he placed himself, as if it were his boat. Then he set off going across the sea. No one knows how he came to arrive there at Tlapallan.[7]

7. There is great variation in legends and interpretations of the disappearance of Quetzalcoatl. In the *Anales de Quauhtitlan* (Lehmann, op. cit., pp. 78, 79-82), he went to the east to the end burned himself; his heart survived, rose to the heavens, and became the morning star. He said the star vanished for four days, while Quetzalcoatl was in the underworld; other eight days, the star reappeared. The version in Tezozomoc (op. cit., p. 77) has Tezcatlipoca cast Quetzalcoatl from Chalchiu to Tlapacoya, or Tlilapan, where Quetzalcoatl died; his body was burned, and he became a star or comet. Durán (op. cit., pp. 75-6) relates that, on reaching the sea coast, Quetzalcoatl, at a single word, rose a mountain and entered it; cast a cape over the sea, made a ship with his hand, and sailed off; dried the sea with a blow of his staff and marched through with his people—the sea then engulfing the pursuers. In "La leyenda de los soles" (Codex Chimalpopoca), Quetzalcoatl (Ce acatl) is said to have undertaken a series of conquests (Ayotlan, Chalco, Cuitlan, Quauxtla, Huipantenco, Tlaquilan, Atlixco), and to have abdicated, died, and been burned or hidden at Tlapallan. (The passage cited is incomplete because of a lacuna in the original text.)

HERE BEGINNETH THE ADDITION TO THE THIRD BOOK, CALLED THE APPENDIX, WHICH TELLETH OF THE SOULS OF THOSE WHO DIED AND OF STILL OTHER SERVICES [RENDERED] THE RULERS.[1]

NICAN VMPEOA IN JANCA, INJC EY AMOXTLI IN ICOTŌCA APENDIZ IN ITECH TLATOA IN JMANJMAOĀ IN OMJCQUE. YOAN OC CEQUJ IN ITLAECOLTILOCA, IN TLACATECUTL.

775 **First Chapter**, which telleth of the souls of those who died, who went there to the land of the dead; and of how they were buried.

[This is] what the natives knew: the old ones and the chiefs. For all who died went to [one or another of] three places when they died.[2]

The first place was there to the land of the dead[3] where dwelt, and was, Mictlan tecutli or Tzontemoc, and Mictecacihuatl, consort of Mictlan tecutli.

And there, to the land of the dead, went [the souls of] all of those who died here on earth, who died only of sickness—the chiefs, the vassals.

764 And when one died—man, or woman, or child—they thus prayed to him who had died, who had met his end. They spoke to him when still he lay couched and stretched out:

[761] "My son, thou hast known sorrow; thou hast suffered. Our lord hath been good to thee. For in truth life on earth the abode of all of us is not always to be, but it is only for a little time, only a moment, as we warm ourselves [in the sun]. Only through the grace of our lord do we come to know ourselves.

764 "And now, verily, Mictlan tecutli receiveth thee there—Acolmanacatl, Tzontemoc; and Mictecacihuatl. For he hath placed thee in this place; he hath provided thee a seat. Lo, there is the abode of all of us; 775 there is the place where we all come to our fate—there where the earth groweth wide, where forever [all things] end.

"For thou hast removed to the abode of the dead, to the place of descent, to the end of journeys, and to the place of no outlets and no openings.[4] For

1. Tlacatecutl, in the future volume, is probably to be read *tlacatecuhtli*.
2. Not mentioned in the Appendix to Book III is the concept of a special place for women who died in childbirth. See Book IV.
3. Although Sahagún invariably translates *mictlan* as *infierno*, the literal meaning is land or place of the dead.
4a. The terms *apechqujacoioci* and *ximcalocan* might literally be rendered "place without a smoke hole" and "place without a chimney." For elaboration see here and thereafter.

764 no more mayest thou make thy return, thy way back. Yea, no more mayest thou bethink thyself of what
[775] thou hast left behind thee. For much time thou hast bereft and orphaned thy children and grandchildren. Yea, no more mayest thou bethink thyself how they may end. We go to join with and rejoice with thee after many days."

And behold how they addressed the kin of the dead:

761 "My son, take to thyself and exert all thy force; apply thyself that thou take maize gruel and [thy]
764 half-tortilla.[a] Take courage. Of what avail is what we say? Is it that [our lord] fetteth ill will toward us?—that he mocketh us? Verily, [it is that] our lord hath willed and commanded that he hath already fulfilled his office and reached his end here. What? Couldst thou in truth yet bring it about that he might borrow a little, a day, [here] on earth?

"And although thy heart and body feel affliction and pain, although it is dark there where he lieth alone and awaiteth the commandment of our lord, be of good cheer, and henceforth be sure of thy orphanhood.

764 "What canst thou do, that thou art bereft? My son, use all thy strength; let not thy head hang, like one in grief. For now we have come to strengthen thy heart and thy body by a little. For here is the purpose and office of motherhood, of fatherhood. For our lord hath destroyed [the household]; for thy mothers and fathers have gone, they who well uttered and recounted their consolations and lamentations. And this is enough. Thus [we who are as] thy mothers and fathers have conveyed thee. Go in peace."

Then the old men whose office it was prepared the paper vestments. They shredded, cut up, and bound the paper. And when they had prepared the paper adornment, thereupon they arrayed the dead one; they flexed [his limbs]; they poured water upon his head.

They said to him: "Behold that which thou hast enjoyed, that by which thou hast lived on earth."

And then they poured a little water into a bowl, and offered it [to him], and said to him:

"Behold wherewith thou shalt travel."

Then they put [the bowl] in with him, and thereupon they bound him well; they bound firmly upon him [the wrappings for the dead]; they wrapped them round and round him and tied them firmly

about the dead one. Then they laid out his paper adornment in order. And when they had arranged it in order, then they gave it all to him. They placed it as an offering before him and said to him:

"Behold wherewith thou shalt pass there where the mountains come together.

"And behold how with this thou shalt pass the road which the serpent watcheth.

"And behold wherewith thou shalt pass the green lizard, the *xochiocuai*.

"And behold wherewith thou shalt cross the eight deserts.

"And behold wherewith thou shalt go over the eight hills.

"Behold wherewith thou shalt travel the place of the obsidian-bladed winds."

For there, in that place, the place of the obsidian-bladed winds, it was said that all suffered much. By winds were all the obsidian blades, and stones, borne. And hence, when valiant men died, [their kin] burned all of their baskets with insignia, their shields, their obsidian-bladed swords, and all the things [which they had wrested from] their captives; and all their capes, and all their clothing of whatever sort.

Likewise, [if it were] a woman, all her baskets, her waist bands, her divided cords for holding up the textile, her skeins, her shuttles, her battens, her cane stalks, her combs—also all [this] burned with her.

It was said that they would encircle themselves [with these things] and thus be protected in the place of the obsidian-bladed winds, and not suffer greatly. And he who had nothing among his wretched belongings, who went here, underwent much pain and suffered much in order to pass the place of the obsidian-bladed winds.

And also they caused him to carry a little dog, a yellow one; they fixed about its neck a loose cotton cord. It was said that [the dog] bore [the dead one] across the place of the nine rivers in the land of the dead.

And when Mictlan tecutli was reached, he offered up all with which they had adorned the dead ones on earth—the ceremonial papers,[6] the pine incense burners, and bundles of canes [for perfume], loose cotton thread, and red cotton thread, or his cape

6. Reliefs showing it predecessor. In Seler's *Mixtec Codexes* (p. 200, n. 3) this is called: "[illegible]—Ceremonial, [illegible] Mixtec [illegible]—Aztec [illegible]."

764 or his breech clout. And a woman, her skirt [or] her
775 shift, and indeed all her clothing she had left they bound together.

And when eighty days [had passed], then they burned [them]. Likewise was this done after a year, and after two years, and after three years. And when four years had passed, [then was] the last time that they did [this].[5]

And all this, it was said, came to Mictlan tecutli. And when the four years had ended, thereupon [the dead one] went to the nine lands of the dead,[6] [where] lay a broad river.

There the dogs carried one across. It was said that whosoever came walking [to the bank] looked over to the dogs. And when one recognized his master, thereupon he came to throw himself into the water in order to carry his master across. Hence the natives took pains to keep the dogs.

And it was said that the white dogs and the black ones, those which were black, could not carry one over the river to the land of the dead. It was said that the white dog said: "I have just washed myself." And one which was black said: "I have just stained myself black." Only a yellow [one][7] could bear one across.

And there at the nine lands of the dead, the [dead] were completely destroyed.

764 And when it came to pass that [the old men] had ornamented [the dead one], then they took him to the fire. And first they slew the little dog; thereupon they burned [the dead one and the dog].

Two old women took great care of [the dead one]. And some of the women stayed singing. And when the body of [the dead one] already was burning, they took great pains with it, they kept packing it down. And the body crackled and popped, and smelled foul. And when it came to pass that they had burned it, thereupon they gathered and heaped up the coals. And they said: "Let him be bathed"; and thereupon they bathed him—they cast water upon him; they sprinkled and poured the water on him. When [the coals] grew cold, once more they gathered up the charred remains, and thereupon dug a round hole in which to place it—a pit, and this they called a cave.

5. Cf. also Seler: *Collected Works*, II, Pt. 3, pp. 1492. Offer gives the prices of the underworld were a false necessary bundle of cotton cloth, clothing, and a mask. Similar rites were performed for those who died far from home, or had been taken captive and sacrificed. Seler adds that if many fell in an expedition, the order prepared a public feast, in which there were singing and dancing in honor of the dead, and the burning of a ceremony bundle, gifts, and belongings of the dead. The feast lasted four days.

6. The nine lands or regions of the dead were thought of as arranged in nine, or layers, the ninth being the deepest. See Seler: *Gesammelte Abhandlungen*, IV, pp. 178. The heavens likewise were in nine.

7. Red, according to Seler (*Collected Works*, II, Pt. 3, pp. 1492). See, however, *Mixtec Manual*, p. 206 (*yellow*).

Thereupon they swiftly filled the pit with the charred remains. There they covered it with earth.

And [this was done with] the noblemen as well as peasants.

When they had burned, they gathered and heaped up the bones, filling a small jar or small bowl [with them]. Upon the bones they laid a green stone. They buried [the bowl] in the house or the tribal temple [of the dead one].[9]

And where they buried [the ashes], they always laid offerings for them.

And when the chiefs and princes died, they laid in their mouths green stones.[9] And those who were only peasants [they provided] only a [common] greenish stone or [a piece of] chalchiuh. It was said that these became their hearts.

And the chiefs with many things they thus bedizened: their paper adornment which they made [was a] princely paper streamer of either four fathoms' or three fathoms' [length] of papers which they glued one to another. And upon it they hung various feathers—[those of] the heron and the trupial; dark yellow parrot breast feathers; the red arara; quetzal breast feathers; hawk feathers,[10] and yet other feathers.

And some were made [their] companions—the beloved slaves, perchance a score of the men and as many of the women. Then they said that they were those who cared for their master, and still made chocolate and prepared food for him. And the men they sent as servants, likewise to care for him in the land of the dead.

And when the chief already burned, thereupon they slew the slaves, driving only bird arrows through their throats. They did not burn [with] the chief. Quite separately they buried the slaves, and quite alone the chief burned.[11]

9. Corresponding Spanish text: "se ponían *carbones de su suerte*."

10. See Pl. 10. Quetzalchiuhtzin means literally, "made them swallow."

11. *Kidlach* cf. Sahagún (Bulmarda ed.), III, p. 149. See also Seler, *Einige Kapitel*, p. 299, n. 1: "*Verwandlich verschrieben statt 'ché' in rotes Holz.*" Tlatlacoti and cuauhtlacoti are identified in the same place in the text.

12. Vaillant (op. cit., pp. 101 ff.) then describes the funeral ceremonies for a chief: Neighboring towns were notified of the death, and the ceremonies were scheduled usually for four or five days hence. Chiefs of nearby towns brought gifts (mantles, feathers, cloth). The body of the deceased was wrapped in mantles and adorned with gold, silver, and jewels. A green stone was laid in the mouth, or heart. Hair was cut from the crown of the head of the deceased and kept in a wooden box with a painting of the god (ceremonial); a slave was killed in honor of the god. On the ceremony benches were placed the ceremonies of the god. A solemn procession, including neighboring chiefs, relatives, friends, wives of the deceased, and dancing priests marched (without beating of drums) to meet other priests at the temple. At the foot of the pyramid, they ignited the pyre of wood and some incense. As the body burned, as many as one or two hundred slaves were sacrificed in the usual manner, and burned in another pyre. These were household slaves (including dwarfs, jesters, and the like) and others presented by visiting dignitaries. Next day, the ashes were gathered, along with the remaining hair previously cut. Friends, relatives, and wives laid offerings before the box. There were four days of such ceremony, after which fifteen or twenty more slaves were sacrificed, since, it was thought, the soul of the deceased had undertaken its travels and was in need of aid. Other slaves—up to a dozen or so—were later killed at the end of twenty, forty, sixty, and eighty days. Yearly thereafter, for four years, quail, rabbits, birds, and butterflies were offered before the box, along with incense, food, cotton, flowers, and some of tobacco. These ceremonies were accompanied by feasting, drinking, and dancing.

[Second Chapter][1]

775 The second place [where] they went [was] there to Tlalocan. And in Tlalocan all prospered greatly; all enjoyed much wealth. Never did one suffer. Never was there lack of ears of green maize, [nor] squash, squash blossoms, heads of amaranth,[2] green *chilis*, tomatoes, green beans, [nor] the Tagetes flower.

Injc vecan vilos vmpa in tlalocan. auh in tlalocan cenca netlamachtilo, cenca necuiltonolo, aic mihjiovia, aic polivi in elotl, in aiotetl, yn aiomochquilitl, in ouhtzontli, in chilchotl, i xitomatl, yn ezotl, in cempoalxochitl:

Third Chapter, in which are recorded those who went to heaven.

The third place to which they went was there to the home of the sun, in heaven. Those went there who died in war, either, verily, those who died then in battle, to be despoiled there on the battlefield, where they breathed their last, where fate overtook them, or else [those who] were brought home that later they might die [as sacrifices]. Perchance [one such] was slain in gladiatorial sacrifice, or cast into the fire, or shot with arrows, or slain with pointed canes, or fought with and slain, or covered with resinous wood [to which they laid fire]. All [these] went to the home of the sun.

It was said that they dwelt where was only a place like a plain; when the sun burst forth and arose, then they shouted and cried out to it and struck their shields together. And he whose shield was pierced in perhaps two or three places could well look at the sun. And he whose shield nowhere was pierced could in no wise see the sun nor look into its face. And there, where dwelt those slain in war, [were] the *magueyes*, the thorny shrubs,[1] and clumps of mesquites. And all offerings which [the living] offered them—these they could receive; these could reach them.

And when four years had gone by, then they were changed into birds of precious feather—humming birds, flower birds,[2] yellow birds blackened about the eyes;[3] chalky butterflies, feather-down butterflies, large varicolored butterflies,[4] which sucked [honey

1. *Tzinacán*: according to Seler (*Collected Works*, II, Pt. 3-4, p. 56), it is probably a thorny plant found in the Chichimec highlands; he cites Hernández to identify it as a cactus with cylindrical stem. "It is, therefore, the national weapon in the land of the god of the Otomí."
2. *Xochitototi*: Simeón (*op. cit.*) identifies it as a *cuauxal*—a bird of yellow throat, breast, and stomach. Sahagún (Bulmalo ed., III, p. 184) calls it an "*ave como flor: tiene la garganta, y el pecho, y la barriga amarillos, como flor muy amarilla: tiene en la cara negro color: tiene la cabeza y espaldas y las alas y la cola, entrelaçadas de negro y blanco: tiene las pias negras.*"
3. Cf. Seler: *Einige Kapitel*, p. 302.
4. The butterflies are then described in Seler, *loc. cit.*, and *Collected Works*, IV, p. 62. Sahagún (*op. cit.*, p. 214) mentions *xicalpapalotl*: "*son muy grandes de diversos colores.*"

from the flowers] there where they dwelt. And here upon earth they came to suck [honey] from all the varied flowers—the *erythrina corallodes*,[5] the *cuvelinea principe*,[6] the *collimedra*.[7]

tlalticpac oalhui in quiouelchichina, in jaquich nepopan xochitl in equimijtl, anoço tzompanquauitl xilohxochitl, tlacomilohxochitl.

5. Cf. Sahagún, op. cit., II, Pt. 1-2, p. 53, Pt. 3-4, p. 174; and Bishop Rapistel, p. 302. He says equimitl is the leaf of the tzompanquauitl, the *erythrina corallodes* or *coralliodendron*. Apparently it was used magically; cf. Sahagún, Lib. IX, caps. iii-iv, and Seler's translations of the Nahuatl text in Sahagún (Robredo ed., V, p. 234). Sahagún (Robredo ed., III, p. 277) writes: "Hay también unos árboles que se plantan en las huertas que se llaman tzompanquauhtl; es árbol muchoso, tiene mucho aparadas, tiene la cara colorada y de buen parecer; tiene unas flores que se llaman equimitl; son muy coloradas y de buen parecer y se tienen allí alrededor; las hojas de este árbol se llaman equimitl."

6. Cf. Seler, Bishop Rapistel, loc. cit. In *Collected Works*, II, Pt. 3-4, pp. 133-3, he defines it as "palo de cruz" (name in Chiapas), "cabello de ángel" (*cuvelinea collimedra*). The former is *bonelia equatorum* Z. Seler as *cuvelinea principe* L. fil. Seler believes *xilocochitl* is a name given two distinct flowers. Sahagún (op. cit., III, 276) describes them as "colorados y a manera de hojas dorladas; tienen en sus hojas que se llaman xilocochitl; no son olorosas, pero son muy hermosas." See also Anderson and Dibble, op. cit., II, cap. xxviii.

7. Cf. Seler, op. cit., pp. 174-5. This passage is colored to suit in the song chanted every eight years when vessel vessels were sown. Cf. Sahagún (Robredo ed.), V, pp. 136, 140 ff.; Anderson and Dibble, op. cit., Book II, p. 212.

874

Fourth Chapter, in which it is related how the common folk left their sons in the young men's house, and what customs existed there in the young men's house, so that all were trained and reared.[1]

When a boy was born, then they placed him in the priests' house or the young men's house. That is to say [the parents] promised [the child], gave him as a gift, and brought him as an offering to the temple of the priests' house in order that [the boy] become a priest, or a young [warrior].

If he entered the young men's house, [the parents] promised him to it; they prepared drink and food. They summoned, assembled, and addressed the leaders of the young men. They who had sons [thus] prepared. They said:

"Our lord, savior and protector of all, hath been pleased to place you here. For here you know and are told that our lord hath given [us one like] a precious stone, a quetzal feather. For a child hath come down [to us. Perhaps] he will have that which he hath need of that he may mature. Already he [is like] a jewel. Shall we perchance lay in his hand a spindle and a weaving stick? [For] he is yours; he is your child, your son.

"It is by your grace that we place him [among] your beloved sons, that you may rear, and train, and make of him a brave man of war, raising him to serve our mother and our father, Tlalocatli and Tonatiuh.

"And now to him we dedicate [the boy]—to the shadow and the wind, the lord, the young [god], Yaotzin, Titlacauan, Texcatlipoca.[2] Perchance our lord may sustain him a little.

"We leave him [with you that] he may become a young [warrior]; that he may dwell there in the house of penance, of weeping, of tears—the young

[565]

1. Francisco Javier Clavigero, in *Historia antigua de México* (México: Editorial Porrúa, S. A., 1945), II, pp. 179ff., says they were taken to the telpuchcalli (as well as the calmecac) at the age of fifteen. He cites *Codex Mendoza*, Plates 55 ff. All were for three years of instruction (religious, good manners, good behavior). All who attended, he says, continued—unlike going to our type, commencing to another. Some trained children, some youths, and some girls. The sons were segregated. Men remained until the age of twenty or twenty-two, women until seventeen or eighteen. Attaining his majority, by his request or by arrangements made by his parents, a youth left this training to marry. Men usually followed their fathers' occupations.

The telpuchcalli, according to Cruz (op. cit., p. 70) prepared the young men for war. Discipline was less severe than in the calmecac and education less intensive. Torquemada (op. cit., pp. 238-31) indicates a similar amount of laxity.

Clavigero (loc. cit.) and Torquemada (op. cit., p. 67) agree that girls were raised in seclusion and had no contact with boys or men. They slept and they worked only under the supervision of old women. They were taught how to address their elders with respect. Specifically, Clavigero mentions temple duties (sweeping, offering of incense three times during the night, preparing food for the idols), weaving and other womanly arts and general preparation for marriage. Torquemada mentions some of the punishments for misbehavior.

2. Texcatlipoca was the patron of the telpuchcalli and the education of warriors (Cruz, op. cit., p. 37). Cf. also Torquemada, op. cit., pp. 238-31.

874

men's house, where live and are formed the brave men of war; where they pour forth prayers and petitions for our lord.[3]

"And there he instructeth them and giveth them gifts; there he showeth them his compassion. The [reward of] the soldier, the warrior,[4] he giveth those who weep and suffer. From there our lord causeth them to come forth. They guard and protect [those who] rule[5] [us, there] in the house of learning of him our lord.

"And perchance for us who weep and are in anguish, perchance, if it be our reward and our lot, he may [grow in] perception and ripen. Perchance this may not be—O unhappy we, unfortunate old men and women.

"Or you may indeed receive and take him; let him follow; let him learn where the sons of others wax strong and grow—those orphans of luckless leaders in war."

And behold how [the others] answered and replied. They said:

"Lo, put your hearts at rest, for here we have heard [on behalf of] our lord, the master, the young [god], the shadow and wind, Yaotzin. For it is to him that you pray and to whom you call; it is to him that you offer your jewel, your quetzal feather, the flesh of your flesh. For it is our office only to take and accept what you offer our lord. We have only listened [for him].

"What may our lord wish and require of your jewel, your quetzal feather? Truly, we who are afflicted, who are vassals, we speak in darkness. Our lord, savior and protector of all, Piltzintli, knoweth in what wise [your son] hath been bedight and instructed in the place of darkness [before all time]—what he was girt with and what he brought forth when he was born; and what his day sign is; and finally on [what day sign] he hath been bathed [in baptism]; and what the lot and reward of the child [will be].

"Verily is it said that we, his servants, may only imagine [these things. But] not out of nothing do they later come to pass on earth. For we cause bring-

3. *Intellim, intonatlī mīmaiaoxan.* In Lib. VI of the *Florentine Codex*, fo. 261, the phrase *intellim intonatlim* equals in explicit; cf. corresponding Spanish text in Sahagún, Robredo ed., p. 247. Cf. also *mimaiani* and *mimaiaoxan* in Simeon, *op. cit.* Later in the present chapter the passage *intellim intonatlim* [illegible] and it is perhaps permissible to take the two passages as similar. *Intonatlī* literally might have been interpreted, See Chap. VII.

4. *Ocelopetlatl, quappetlatl.* Cf. Lib. VI, fo. 262 v. Corresponding Spanish text in Sahagún, *op. cit.*, p. 248, reads: ". . . *hay soldados y hombres valerosos de guerra, que sacaban por su defensión.*"

5. *Pilhuj, tepilli.* Cf. Andrés de Olmos, *Dictionnaire de la langue nahuatl ou mexicaine* (Paris: Imprimerie Nationale, 1875) pp. 214, 221; Gardner, *op. cit.*, p. 113; Simeon, *op. cit.* (*pilhuj*).

874

ing [our fortune]; from the place of darkness it cometh forth as our property.

"And [as for] this one: may he enter into the service of the god,[6] in the casting to one side [of rubbish], or the task of laying fires. May he pour forth praises to our lord, the shadow and wind.

"May he remain up here in the light with whatever favors he hath come clothed in, with whatever hath been given him, with whatever he hath been adorned in the place of darkness [before all time]. Perchance, in truth, now and here our lord will offer [these] to him. Perchance all will be lost. Mayhap it is our fate and our lot that, perchance, only for a little time the sun may make him grow. Maybe he will arrive to join him. Mayhap he will move and enter into the arms of the sun.[7]

"And how may we now speak and hearten you? We may not say, 'In this wise will this be; this one will be thus; this one will do so; this one our lord will transform, and thus will he be; he will be someone; he will attain honor; he will walk the earth.'

"And mayhap it will not be our lot and fate that he may live wallowing in dust and filth and living in sin; possibly he may die stoned or cast into a pond; men may mock him for taking after the women of others. Or else he may always be in misery and pain.

"Let us raise and nurture the children; let the word and command to motherhood and fatherhood be given. Perchance in him we may enclose and set in place our hearts; and also you [may do so] whose jewel and precious feather he is.

"And now, may you bring about that, with prayers, weeping, and tears, you may not, being asleep, be neglectful. Call out now in your anguish to the savior and protector of all [that you may learn] what he requireth of us and how he speaketh."

6. Pelpamouiti in tlacaicuilistli. Cf. tlachpanouiztli, tlacaicuilistli, in Lib. VI, fo. 207 v, where the sense is to enter the service of the god or of a noblemen.

7. Meaning of this passage, as well as others equally figurative, is problematical.

51

[p. 52 is blank]

874 **Fifth Chapter, which telleth of the customs which** they practised and observed in order to live there, where they were reared and ripened [in] the young men's house.

And when he entered the young men's house, then [the leaders] charged him with sweeping [of the house] and with the laying of fires. And then they had him begin the penances. When there was singing at night (which was called song with dance), there he consorted with the others, he danced with the others. With the others there was conversation; songs were composed.

And when [he was] yet an untried youth,[1] then they took him into the forest. They had him bear upon his back what they called logs[2] of wood—perchance now only one, or, then, two. Thus they tested whether perhaps he might do well in war when, still an untried youth, they took him into battle. He only went to carry a shield upon his back.

And when [he was] already a youth, if mature and prudent, if he was discreet in his talking, and especially if [he was] of good heart, then he was made a master of youths; he was named *tlacatecatl*. And if he became valiant, if he reached manhood, then he was named ruler of youths (*telpochtlato*). He governed them all; he spoke for all the youths. If one [of them] sinned, this one judged him; he sentenced [the youths] and corrected them. He dealt justice.

874 701 And if he was brave, if he took four [captives], then he attained [the office of] commanding general,[3] general,[4] [or] chief.[5] And also [in these days] one rose to be called constable.[6] Today it is the same, and he is known as *alguacil* [or constable], he who

1. Corresponding Spanish text: "*a los quinze años*."
2. Mitolinkiqui' *quauitl*: literally, wooden needle.
3. Cf. Anderson and Dibble, op. cit., Book II, p. 114, n. 13. The corresponding Spanish text here: "*capitan, y governador al postrero*." Sahagún, in *Biblioteca Mexicana*, p. 343, translates *tlacatecatl* as lord of the dwellings, and in *Collected Works*, II, Pt. 2, pp. 60-61, describes him as an officer of justice, a manager, a military organizer—officers given for life by the rulers, other which they reverted to the house. He also says *tlacochcalcatl* is the same as *tecuhtli*. Durán calls him "*gobernador, o comandante, o como capitan diremos*" (op. cit., p. 134). Sahagún (op. cit.) defines it as "*Otro semejante en cabdillo subcomandante que ayuda [sic] quando [sic] quieren capitan o le quieren; no demanda cuenta en tiempo de guerra; no demanda cuenta en tiempo de Reyes Romanos, capitan alguacil*" (Lib., Cap.).
4. Cf. Anderson and Dibble, loc. cit. Sahagún, in *Biblioteca Mexicana*, translates *tecuhtli* as lord of the upper house, and in *Collected Works*, loc. cit., identifies him as the same as the *tlacatecatl*. He adds that four chiefs held the highest office, dividing the four main divisions of the Mexican tribe, and formed the king's special council; these were the *cuauhtlatoque*, the *tlacochcalcatl*, the *tlacatecatl*, and the *tlilancalqui*. Sahagún (op. cit.) defines the *cuauhtlatoque* as "*Maestros, pues no sentian ofensa*," and then as "*gobernador, capitanes*."
5. Sahagún (op. cit.): "*Un dignidad como la cabeza que ayuda [sic] quando [sic] quieren capitan o le quieren o demanda por su [sic] le ofend de sus pues* [S.-A.]."
6. Corresponding Spanish text: "*uno como capitan alguacil, y tenia cuna gente, y presidia a los delinquentes, y los juzgaba en la carcel*."

And in this way of life, few showed understanding and were persevering. Without number were those who were known as young [warriers]. Because in truth the life of the youth was not harsh. For when yet small boys they all slept together in that place which they called the young men's house, where they lived all together.

The [valiant] men and chiefs put on neck bands of large sea shells, or of gold; they put on netted capes and leather corselets.[8] Then they painted their faces [with black stripes]. It was said, they applied black sweat to themselves. And they pasted on iron pyrites. As one's adornment, ear plugs were set in; turquoise ear plugs were worn. Heron feathers were applied; netted capes were worn. This netted cape [was made of] twisted maguey fiber, knotted like a net with small shells [attached]. The chiefs had golden shells in their netted capes. Of the net capes of the shown ones, it was said, "They are provided with fruit." For this reason it was said, "They are provided with fruit"—[that] very large fiber balls hung from them by strings.

until the half division of the night passed, until after midnight.

And in those times they covered themselves with nothing else. All thus danced, wrapped only in netted capes. They went about nearly naked.

When the singing ended, then all dispersed. Next day [was] the same, and the next day the same. They went together to their city quarters; they all went to sleep in their sleeping quarters, in this young men's house.

And the more valiant men, who already were wise in the ways of the flesh, always slept with their paramours.

Sixth Chapter, in which are related the punishments and penances with which they chastised any youth when he drank wine.

They who were reared in the young men's house took full charge of the sweeping. None then drank wine.

And when already [they were] men, when already they had matured, he who drank wine hid himself well. He concealed himself well, and did not then drink before others; quite secretly and not much did he drink.

And if any youth were seen to drink wine, if it were noted that he was found with wine, [that] perchance he lay fallen, or sang,[1] or [that] somewhere he was seen drunk with others, then because of this [the people] were gathered and rounded up.

And because of this, fear fell [upon all of them]. If he was only a commoner or someone of no importance, he was beaten before the others. He fell under wooden [staves]; he died under wooden [staves].[2] Or he was made to suffer the rope.

And if he was a nobleman's son, they strangled him secretly.

874
836

And these youths had their paramours by twos or threes. Perchance one indeed was in her own house; perchance a number lived in various places. And when, they said, the estate of youth was ended, [the youth] paid something that he might leave the [other] youths. Large capes he left [for them]—perhaps ten or twenty, if he was rich.

874
[582]

When the masters of the youths had consented,[3] when they had given the youths leave to go, then (it is said) one was of marriageable age. He took only one woman, whom he kept at his home.

And when a youth was mature, not merely of his own will did he depart the estate of youth. He grew old where the youths were. And if he willed, the chief gave him leave [to go].

And not very often from the youths' place [came], perchance, lords; only chiefs, commanding generals, and generals[4] were taken thence. Lords and mar-

5. Of these Sahagún elsewhere says that they were principales over soldiers and captains. The tlacochcalcatl was a pilli (prince or noblemen); the tlacochtecutli was "principal en las cosas de la guerra," and Sahagún refers to them as soldiers (Dehouche ed., II, pp. 117-18). Specifically of the tlacochcalcatl he says: "Tiene autoridad para mandar a los soldados . . . para reprenderlos y castigar porque ya están en la dignidad y estado, ya tienen el principal lugar, donde le pueda mandar señor; ya le llaman por estos nombres tlacochcalcatl, tlacochtecutli, por estos nombres le nombran sobre los pequeños" (*Ibid.*, p. 136). Of both officials, he writes: ". . . el señor es como cabeza del pueblo; uno de ellos era pilli y otro era criado en las guerras. El uno de ellos se llamaba tlacochcalcatl, y el otro tlacochtecutli. . . ." These personages—tlacochcalcatl, tlacochtecutli, tlacochcalcatl, and tlacochcalcatl—"eran dichos por la inspiración de nuestro señor dios, porque eran más hábiles para ello" (*Ibid.*, p. 138).

793

Seventh Chapter, in which it is told how the chiefs and noblemen left their children there at the priests' house, and what manner of customs were observed at the place called the priests' house.

Chiefs, noblemen, and others besides who were well born, these same took their sons, and promised them, to the priests' house; and also any others [did so] who wished it.[1]

All became priests—the noblemen because the place of rearing in the priests' house, the school, the place of instruction, [was] a place of chastity, a place of reverence, of reflection, of prudence, of virtue, of righteousness. For then [there was] no filth ijor vice, nothing blamable in the lives of the priests [and] in the training [given in] the priests' house.[2]

A chief, nobleman, lord, or anyone who was rich, when such vowed to bring his sons [to the priests' house], prepared drink and food. He summoned and assembled the priests, and invited the old priests, and gathered those who were well born.[3] The old men made an entreaty; the old ones besought the priests, and said to them:

"Our lords, priests, you have been pleased to bring yourselves here; you have taken your noble feet [through various places]. Perchance straw or grass you have somewhere touched with your feet; perchance in some place you may have injured or knocked something against your revered feet.

"Our lord hath placed you here. You must know and hear, verily, [that] now our lord, savior and protector of all, hath given one [who is as] a jewel, a quetzal feather.

"We have dreamed; we have quickly arisen. Now, what will the boy, [this] small child, be? Surely we shall not offer him a spindle and a batten. For he is your chattel, your charge. We now pray to the lord Topiltzin, Quetzalcoatl,[4] to him who is feathered in

1. Torquemada, op. cit., p. 22, says they were taken by the relatives at the age of four. Clavigero, op. cit., pp. 190, 200, says the age for those entering both the seminary and the adjunct was fifteen.

2. Training and standards of conduct were much more rigorous in the seminary than in the adjunct. Cf. Cano, op. cit., p. 54.

Cano (*ibid.*, pp. 57) points out that all learning was in priestly hands—science, war law (magic, science, state-craftcraft), the calendar (predictions of the future, astrology), mythology, history, hieroglyphic writing, law. These bodies of knowledge may indicate a curriculum for the old manner. Women also participated in the wars and were the female seminary.

3. To assist, we can say an alternative meaning could be "those with fathers and mothers." Siler (*Mexica Kapital*, p. 347), translates "Es gaben Verhältnisse und Angehörige Bäter (und) Mütter."

4. Quetzalcoatl was patron of the seminary and of the education of priests and noblemen (Cano, op. cit., p. 28).

[875]

black, that he may enter the priests' house, the house of weeping, of tears, and of sadness, where grow and ripen the sons of our lords.

"And there prayers are raised to the savior and protector of all; there he poureth forth prayers to our lord; there he is importuned with weeping, tears, and sighs. There one is given [gifts], and is chosen for him [our lord]. For there we speak in his worthy house—there where [the shell trumpet] is blown, where the fire is bored, where the children of our lords are reared—where there is sweeping, the clearing of trash; where [sin] is put to one side. [This] disposition our lord will bring about.[5]

"In your noble laps, on your revered backs, in your valued protection we place the child. Grant him [your love], for we give you our child. Grant him your love; give him [your protection]. May he be planted here that he may be reared and wax strong; that he may do penances all night and all day, going about on elbow and on knee, calling and crying out to our lord, weeping, sad, and sighing.

"This is all which you have been caused to know and to hear, O priests."

Behold how the priests responded and replied:

"Here we have taken and received your valued spirit and words. Although we are unworthy, although we do not deserve it, although we do not merit it, your valued spirit and words have come forth [telling] how and why you are anguished over your jewel, your quetzal feather. But we only hear [on behalf of] our lord Topiltzin, Quetzalcoatl, of him who is feathered in black. What will he require of your jewel, your quetzal feather? What will he wish of you? What will become of your jewel and quetzal feather?

"Without doubt we would be foolish [to say] that thus this [is], that this one [is] thus. Let us all trust in our lord, savior and protector of all. What will he wish of us? Let us put our trust in him."

5. Mention of the protection of the god and the priests, and of expected rewards, is probably a reference to the fact that from the reference come the priesthood and high military, administrative, and judiciary officials (Ibid., pp. 32 f.). Durán (op. cit., pp. 124-5) writes: "Los regocijos mayores de Moctezuma los hacían con por la aplicación diligentísima al aprendizaje de donde dispuso de hacer convidar en los templos con gran aparato y ceremonias ya viejos sacerdotes los ancianos a Hechiceros y cargos honrosos en los capellanes que voy en ello como como ellos decían sabían mucho y conocían que hablaban en nuestro nuestro y según el respeto y reverencia en los hacía y voy en ello en los hago a como dicen decían después o arrepentirse ofrecían a quechiqui ai, pues con ellos se celebraban los cantos y se reunían los parientes y compañeros en honrosos a los caballeros y jóvenes. Los viejos eran el consejo y consejo decían en nuestro hogar como así el mayor rando que los consejos que en conjunto decían gran decanato de su real conjunto así a la nuestro rodeaba como como pueblos en capellán Hechiceros después de hacer predicación y bienes y corrupto a los quedó quando los decían como Hechiceros y remedios hacían nuestro conocimiento contradicción según hacía nuestro hacían la dicen con que decían nuestro conocimiento de nuestro que pudieran dado el nuestro de decían pues con capellán conocían conocían grandes grandes hacían y conocían de conocían hacían grandes decían y hacían y voy en ello en hacer el que consejo la qué grande reflexionar nuestro consejo de hacían pues no he hablado en nuestro grandes decían y pues que los que cabeza y conocían el grande decían quedó decían los decían quedó con conocían a nuestro decían nuestro conocían decían decían decían nuestro conocían decían los decían quedó con conocían nuestro conocían."

Then they bore the child to the temple. The parents carried paper and incense. Chiefs or noblemen [took] breech clouts, capes, precious neck bands, quetzal feathers, and green stones, which they offered as gifts. The poor took only [their] paltry papers and incense, or sweet smelling herbs, which they used as their gifts.

When they had taken [the children] there, they then anointed them with black; they covered their faces well with a black paste. They then gave them neck bands of the roots of the birthwort.[6] A poor [child] they only provided a neck band of loose cotton. Then they cut his ears and cast the child's blood before the image of the devil. If he was yet a small child, then the parents took him [away]. If he was a chief's son, they left his neck band there at the temple; the priest took it away.

Then [the priests] taught him all the manner of living and rules by which they lived in the priests' house.

Eighth Chapter, which telleth of the way of life which they kept in the priests' house, where lived or were reared the fore priests and [other] priests.

First: All the priests slept there in the priests' house.

Second: It was required that everyone should sweep when it was well before dawn.

Third: Those already grown, already [more] hardy, then went to seek maguey thorns. They said, they pruned the maguey thorns.

Fourth: When they were already novice priests of whatever kind, they went forth when it was still night, or when midnight had passed; they started to go to the forest in order to gather and carry upon their backs wood which they called logs. This they burned all night in the priests' house as the priests kept watch.[1] And if anywhere mud [for adobes], a wall, cultivation of the soil, or a canal were to be undertaken, all went forth just before dawn. Those who guarded [the house] were left [behind], as well as those who would go to serve the food. They went in a group. None failed. In good order they passed the whole day.

Fifth: A little before they ceased their work, they went to see to the god's affairs, the duties in the priests' house, and the penances. When still a little sun [shone], or when it was already becoming dark, [this was the time which] was called the cutting of maguey spines. When it was quite dark, when it was already deep night, then the priests began what was called the placing of the maguey spines. One at a time they went forth. First [each] bathed himself. Then they took [their] shell trumpets, and incense ladles, sacks filled with incense, and they took up pine torches. Thereupon [each one] set forth to place the maguey thorns. They went naked. Those who would perform great penances[2] might go as far as two leagues to place the maguey spines—perchance

1. Torquemada (op. cit., p. 337) writes: "Antes Vísperas, que subían los sacerdotes de la noche, salían en los Templos, y Curas en los conventos, [illegible] de los Calles y Cimborios. Estos subían por sus quartos, y horas, acostumbradas, acabado el Olympo de su vigilia, y cada Cura subían desde la primera noche, hasta las diez, como hasta media noche; y mandaba como, acostumbrar en la cela, como, hasta las tres de la madrugada; y á estos ayudaban otros hasta el día. Su oficio era disciplinar á los Sacerdotes, y Ministros, los que subían en los Templos, para que acudiesen á los Sacrificios, y hacer ministerios. Los de los conventos, á los de la República, para la cocina, cumplieron cuidados obligados. Tenían también cuidado entre Vísperas de adaçar el Pasaje de los brazos, para que disciplinar cuidaran, y cuanto se apagaran. Y á esta Vida llamaban Iaxquatlatoli, que quiere decir Vida."

2. The context of this passage suggests that mortificatoriis might better read mortificationibus. Otherwise this passage is cause not mortificatoriis might be rendered "Thorns which can was much frightened."

84 743 into the forest, or on the desert, or into the water. A younger one, or whomever wished, went perhaps half a league to place the spines. [The penitent] bore his shell trumpet and went blowing [it] where he placed the thorns. Wherever he came to be, he went blowing a trumpet.

[273] Sixth: When the priests slept, no two lay [together]. All lay quite separate. None were covered together.

[252] Seventh: The food they prepared for themselves, together; for it was their own food which they ate. And if anyone returned with food from his house, he ate it not alone.

Eighth: At midnight, when, as was said, night divided in half, everyone arose and prayed. If anyone failed to do so because he slept, if he did not awake, then, for this, all gathered together and drew blood from his ears, or his breast, or his thighs, or the calves of his legs. Because of this, fear verily fell [upon the people].

[273 836 688] Ninth: None then were proud; none then were unruly. All lived well ordered [lives]. If at times it appeared that one perhaps drank wine, or was given to women, or committed a great [fault], then they went to apprehend him. No mercy was shown. He was burned, or strangled, or cast into the fire alive or shot with arrows. And if he sinned only lightly, they drew blood from his ears, his flanks, or his thighs with maguey spines or with a [sharpened] bone.

Tenth: The small boys were so raised that if they did nothing of great evil, they then drew blood from their ears, or swinched them with nettles.

Eleventh: At midnight the principal [priests] went down into the water and bathed there in the water.

[785] Twelfth: When it was a time of fasting, everyone observed it. Verily, [only] at the moment when midday arrived did indeed all eat—even the small boys. And when it was the fast which they name Atemalquale, then they ate but sparingly.[a] Some ate [only] at midnight and yet again went to eat at midnight; some ate at noon, and yet again went to eat at noon. No chili, no salt did they eat; neither, that they might sleep, [did they] even [drink] water. They said that the fast was broken if they ate or drank even a little.

Thirteenth: Very carefully were they taught good discourse. If one spoke not well, if one greeted others

no. well, then they drew blood from him [with maguey spines].

Fourteenth: Carefully were they taught the songs which they called the gods' songs. They were inscribed in the books. And well were all taught the reckoning of the days, the book of dreams, and the book of years.

Fifteenth: A strict vow of the priests was [that of] chastity, of a pure life. In no wise were they to look upon a woman.[1] A strict vow of theirs was [a life of] moderation. Never then told lies. The priests were very devout. They were very god-fearing.

Now enough of this. Here is told the way of life of the priests. Much else, which is left [unsaid] must [yet] be related. [This] will be told in another place.

1. Probably a life of celibacy is not to be understood. Cf. Charles E. Kubler, Children Raised Quetzalcoatl, Tlamacazqui, 1948) p. 70, 72, 77, and elsewhere for examples of unusual priests.

[p. 66 is blank]

4: Sahagún M-5 (1529-1590) 1952 NU7 Astec NU7

793 **Ninth Chapter:** here is told how were established and chosen the high priests, the Quetzalcoatl priests, the first of whom was [named] Totec Tlamacazqui and the second Tlaloc Tlamacazqui;[1] and [how] those whom they set up were especially wise and prudent.

And one who had distinguished his way of life and otherwise [had followed] the precepts and ordinances of the priests, this one was set apart and chosen, to be made a keeper of the god.[2] The chief, and the great judges,[3] and all the nobles chose him and gave him the name of Quetzalcoatl. There were two Quetzalcoatl priests: one was called Totec Tlamacazqui, one was called Tlaloc [Tlamacazqui].

The Quetzalcoatl priest [called] Totec Tlamacazqui was dedicated to Uitzilopochtli; the Tlaloc was dedicated to the lord of Tlalocan, the [god of] rain. These [were] exactly equal [in station].

555 793 And although he might be poor, or miserable; though his mother and father might be the poorest of the poor, if he well ordered his life and [kept] the commandments of the priests, he was taken to be named this Quetzalcoatl priest. He was called either Totec Tlamacazqui or Tlaloc.

No lineage was considered; only a good life was noted. One was sought of saintly life, of righteous life; of pure heart, good, and humane; who was resigned; who was firm and tranquil; a peace-maker, constant, resolute, brave; caressing, welcoming, and friendly to others; who was compassionate of others and wept for them; who had awe in his heart. He was called divine of heart, pious, god-fearing—one who wept, who was sad, who sighed.

793 And when he began this [training], he was still called an acolyte; then a priest; then a fire priest[4]—already due reverence. Then from these were chosen those named Quetzalcoatl priests.

1. "El número de Quetzalcoatl [sic] debía a veinte, es por necessario del dios que se consideraba que los sacerdotes eran el arquetipo del sacerdote" (Caso, op. cit., p. 45). Intermediary offices between these high priests and the lower hierarchy are given briefly in ibid., pp. 47f.; see also Tezozomoc, op. cit., pp. 178f. The responsibilities of various functionaries are also suggested in the Appendix of Book II of Sahagún, for which cf. Anderson and Dibble, op. cit., Book II, pp. 100ff. Tezozomoc, op. cit., pp. 221-2, mentions only one Quetzalcoatl priest: "Tenían un Sacerdote en un Cerimonia, que se llamaba del número de un Dios, Quetzalcoatl; al qual estaba encarlo sobre su guarda, y doctrina, enseñandole la virtuosa, y amorosamente las virtudes, y buenas costumbres."

2. The terms of employment were until (just) and pia (yoeli). Cf. Simeon, op. cit. The dictionaries define the term as priest.

3. Tezozomoc: Sahagún describes them as "los mayores jueces . . . estos amonestaban con gran diligencia los mozos que iban a ser ministros"; on the death of chiefs, they were among the electors of a new one (Sahagún, Bulmer ed., II, pp. 318, 321).

4. Cf. Anderson and Dibble, op. cit., Book II, p. 78, n. 7.

793 And this priesthood lived in moderate circumstances and followed a distinguished way of life. For rather severe was the life of the priests.

Thus was the manner of rearing of the priesthood distinct from that of the young [warriors].

First Chapter, which treateth of the sun.

The sun: the soaring eagle,[2] the turquoise prince, the god.

He shone, cast forth light, sent forth *rays* [of light] from himself. Hot, he burned men—he burned them exceedingly, and made them sweat. He turned men's skins brown, darkening them, blackening them, blistering them.

Every two hundred and sixty days, when his feast day came, then his festival was honored and celebrated. They observed it on his day sign, called Naui olin. And before his feast day had come, first, for four days, all fasted. And when it was already his feast day, when first he came forth, when he emerged and appeared, incense was offered and burned; blood [from the ears] was offered. This was done four times during the day—when it was dawn; and at noon; and past midday, when already [the sun] hung [low]; and when he entered [his house]—when he set; when he ended [his course].

And early in the morning it was said: "Now he will work; now the sun will labor. How will the day end?" And when night fell, it was said: "He hath worked; the sun hath labored." When he issued forth [at dawn], sometimes he was blood-colored, bright red, ruby-red. And sometimes he was quite pale, white-faced, pallid, because of the clouds—a mist, a

heavy pall, or clouds of many colors—which were spread before his face.

Eclipse of the Sun

782
824

When this came to pass, he turned red; he became restless and troubled. He faltered and became very yellow. Then there were a tumult and disorder. All were disquieted, unnerved, frightened. There was weeping. The common folk raised a cry, lifting their voices, making a great din, calling out, shrieking. There was shouting everywhere. People of light complexion[1] were slain [as sacrifices]; captives were killed. All offered their blood; they drew straws through the lobes of their ears, which had been pierced. And in all the temples there was the singing of fitting chants; there was an uproar; there were war cries. It was thus said: "If the eclipse of the sun is complete, it will be dark forever! The demons of darkness will come down; they will eat men!"

The moon (Tecuciztecatl).

When he[6] newly appeared, he was like a small bow, like a bent, straw lip ornament—a small one. He did not yet shine. Very slowly, he went growing larger, becoming round and disc-shaped. In fifteen days he was completely rounded and filled out, as he became entire and mature. And when he waxed full and round, then he appeared, then he arose there at the place where the sun appeared. When it was already dark, [he was] like a very large, earthen skillet—very round, circular. [He was] as if red, a bright, deep red.

And after this, when he had already followed his course a little, when he had risen high, he became white. It was said: "Already he shineth; already the moon is brilliant; already he giveth forth moonbeams." He was then seen to be pale, very white. Then appeared [what was] like a little rabbit stretched across his face. If there were no clouds, if it were not overcast and covered by clouds, like [the sun] he shone, and it was like daytime. It was said: "[It is] almost [like] day; everywhere it is bright. Light is spread everywhere."

And when he had completely reached and attained his brilliance, for as many days as he had thus waxed and been round, little by little he again grew small; he became smaller. Again he became as when he had newly appeared. Gradually he waxed and proceeded to vanish. It was said: "Already the moon is dying; now he slumbereth soundly—he falleth into a deep sleep. It is already toward morning, near dawn, when he ariseth." And when he had completely disappeared, it was said: "The moon hath died."

6. In the Spanish version, the moon (*luna*) is feminine. Since both the sun (*Nanahuatzin*) and moon (*Tecuciztecatl*) are male in the fable of the rabbit and the moon, we have made both of these consistently masculine.

5: Sahagún M-5 (1529-1590) 1953 NU7 Aztec NU7

moon). They struck his face with [the rabbit]; they wounded his face with it—they maimed it. The gods then dimmed his face. Thereafter [the moon] came to arise and come forth.

It is said that when yet [all] was in darkness, when yet no sun had shone and no dawn had broken—it is said—the gods gathered themselves together and took counsel among themselves there at Teotihuacan. They spoke; they said among themselves:

"Come hither, O gods! Who will carry the burden? Who will take it upon himself to be the sun, to bring the dawn?"

And upon this, one of them who was there spoke: Tecuciztecatl presented himself. He said: "O gods, I shall be the one."

And again the gods spoke: "[And] who else?"

Thereupon they looked around at one another. They pondered the matter. They said to one another: "How may this be? How may we decide?"

None dared; no one else came forward. Everyone was afraid; they [all] drew back.

And not present was one man, Nanauatzin; he stood there listening among the others to that which was discussed. Then the gods called to this one. They said to him: "Thou shalt be the one, O Nanauatzin."

He then eagerly accepted the decision; he took it gladly. He said: "It is well, O gods; you have born good to me."

Then they began now to do penance. They fasted four days—both Tecuciztecatl [and Nanauatzin]. And then, also, at this time, the fire was laid. Now it burned, there in the hearth. They named the hearth *teoxacalli*.

And this Tecuciztecatl: that with which he did penance was all costly. His fir branches [were] quetzal feathers, and his grass balls [were] of gold; his maguey spines [were] of green stone; the reddened, bloodied spines [were] of coral. And his incense was very good incense. And [as for] Nanauatzin, his fir branches were made[5] only of green water rushes—green reeds bound in threes, all [making], together, nine bundles. And his grass balls [were] only dried pine needles. And his maguey spines were these maguey spines. And the blood with which they were covered [was] his own blood. And [for] his incense, he used only the scabs from his sores, [which] he lifted up. For these two, for each one singly, a hill was made. There they remained, performing penance [illegible]

539

seven for four nights. They are now called pyramids —the pyramid of the sun and the pyramid of the moon.

And when they ended their four nights of penitence, then they went to throw down and cast away, each one, their fir branches, and, indeed, all with which they had been performing penances. This was done at the time of the lifting [of the penance]; when, well into the night, they were to do their labor; they were to become gods.

And when midnight had come, thereupon [the gods] gave them their adornment; they arrayed them and readied them. To Tecuciztecatl they gave his round, forked heron feather headdress and his sleeveless jacket. But [as for] Nanauatzin, they bound on his headdress of mere paper and tied on his hair, called his paper hair. And [they gave him] his paper suit and his paper breech clout.

And when this was done, when midnight had come, all the gods proceeded to encircle the hearth, which was called *teotexcalli*, where for four days had burned the fire. On both sides [the gods] arranged themselves in line, and in the middle they set up, standing, these two, named Tecuciztecatl and Nanauatzin. They stood facing and looking toward the hearth.

And thereupon the gods spoke: They said to Tecuciztecatl: "Take courage, O Tecuciztecatl; fall —cast thyself—into the fire!"

Upon this, he went [forward] to cast himself into the flames. And when the heat came to reach him, it was insufferable, intolerable, and unbearable; for the hearth had blazed up exceedingly, a great heap of coals burned, and the flames flared up high. Thus he came terrified, stopped in fear, turned about, and went back. Then once more he set out, in order to try to do it. He exerted himself to the full, that he might cast and give himself to the flames. And he could in no way dare to do it. When again the heat reached him, he could only turn and leap back. He could not bear it. Four times indeed—four times in all—he was thus to act and try; then he could cast himself no more. For then [he might try] only four times.

And when he had ended [trying] four times, thereupon they cried out to Nanauatzin. The gods said to him: "Onward, then, O Nanauatzin! Take heart!"

And Nanauatzin, daring all at once, determined

—resolved—hardened his heart, and shut firmly his eyes. He had no fear; he did not stop short; he did not falter in fright; he did not turn back. All at once he quickly threw and cast himself into the fire; once and for all he went. Thereupon he burned; his body crackled and sizzled.

And when Tecucizteca saw that already he burned, then, afterwards, he cast himself upon [the fire]. Thereupon he also burned.

And thus do they say: It is told that then flew up an eagle, [which] followed them. It threw itself suddenly into the flames; it cast itself into them, [while] still it blazed up. Therefore its feathers are scorched looking and blackened. And afterwards followed an ocelot, when now the fire no longer burned high, and he came to fall in. Thus he was only blackened —smutted—in various places, and singed by the fire. [For] it was not now burning hot. Therefore he was only spotted, dotted with black spots, [as if] splashed with black.

From this [event], it is said, they took—from here was taken—the custom whereby was called and named one who was valiant, a warrior. He was given the name *quauhtlocelotl*. [The word] *quauhtli* came first, it is told, because, [as] was said, [the eagle] first entered the fire. And the ocelot followed thereafter. Thus is it said in one word—*quauhtlocelotl;* because [the latter] fell into the fire after [the eagle].

And after this, when both had cast themselves into the flames, when they had already burned, then the gods sat waiting [to see] where Nanauatzin would come to rise—he who first fell into the fire—in order that he might shine [as the sun]; in order that dawn might break.

When the gods had sat and been waiting for a long time, thereupon began the reddening [of the dawn]; in all directions, all around, the dawn and light extended. And so, they say, thereupon the gods fell upon their knees in order to await where he who had become the sun would come to rise. In all directions they looked; everywhere they peered and kept turning about. As to no place were they agreed in their opinions and thoughts. Uncertain were those whom they asked. Some thought that it would be from the north that [the sun] would come to rise, and placed themselves to look there; some [did so] to the west; some placed themselves to look south. They expected [that he might rise] in all directions, because the light was everywhere.

5: Sahagún M-5 (1529-1590) 1953 NU7 Aztec NU7

And some placed themselves so that they could watch there to the east. They said: "For there, in that place, the sun already will come to arise." True indeed were the words of those who looked there and pointed with their fingers in that direction. Thus they say, [that] those who looked there [to the east were] Quetzalcoatl; the name of the second was Ecatl; and Totec, or Anauatl itecu; and the red Tezcatlipoca.[6] Also [there were] those who were called the Mimixcoa, who were without number; and four women—Tiacapan, Teicu, Tlacoyehua, and Xocoyotl.

And when the sun came to rise, when he burst forth, he appeared to be red; he kept swaying from side to side. It was impossible to look into his face; he blinded one with his light. Intensely did he shine. He issued rays of light from himself; his rays reached in all directions; his brilliant rays penetrated everywhere.

And afterwards Tecuciztecatl came to rise, following behind him from the same place—the east,—near where the sun had come bursting forth. In the same manner that they had fallen into the fire, just so they came forth. They came following each other.

And so they tell it; [so] they relate the story and repeat the legend: Exactly equal had they become in their appearance, as they shone. When the gods saw them, [thus] exactly the same in their aspect, then once more there was deliberation. They said: "How may this be, O gods? Will they perchance both together follow the same path? Will they both shine together?"

And the gods all issued a judgment. They said: "Thus will this be; thus will this be done."

Then one of the gods came out running. With a rabbit he came to wound in the face this Tecuciztecatl; with it he darkened his face; he killed its brilliance. Thus doth it appear today.

And when this was done, when both appeared [over the earth] together, they could, on the other hand, not move nor follow their paths. They could only remain still and motionless. So once again the gods spoke: "How shall we live? The sun cannot move. Shall we perchance live among common folk? [Let] this be, that through us the sun may be revived. Let all of us die."

6. This passage reproduces what the Aztec appears to mean. The data do not all conform with those set forth in standard sources. It might be noted, however, that with passage of time the attributes, personalities, and manifestations of the gods underwent considerable changes. Cf. John Eric Thompson: *Mexico Before Cortez* (New York: Scribner's Sons, 1933); Angel María Garibay K.: *Llave del náhuatl* (Otumba: [Imprenta Mayk, S. A.], 1948), pp. 197-207; Alfonso Caso: *La religión de los aztecas* (México: Imprenta Mundial, 1936).

539 Then it became the office of Ecatl to slay the gods. But they say thus: that Xolotl wished not to die. He said to the gods: "Let me not die, O gods." Wherefore he wept much; his eyes and his eyelids swelled.

And when he who dealt death was to overtake him, he fled from his presence; he ran; he quickly entered a field of green maize, and took the form of, and quickly turned into, two young maize stalks [growing] from a single root, which the workers in the field have named *xolotl*. But there, in the field of green maize, he was seen. Then once again he fled from him; once more he quickly entered a maguey field. There also he quickly changed himself into a maguey plant [consisting of] two [parts] called *mexolotl*. Once more he was seen, and once more he quickly entered into the water and went to take the [136] shape of [an amphibious animal called] *axolotl*. There they could go to seize him, that they might slay him.

And they say that though all the gods died, even then the sun god could not move and follow his path. Thus it became the charge of Ecatl, the wind, who arose and exerted himself fiercely and violently as he blew. At once he could move him, who thereupon went on his way. And when he had already followed his course, only the moon remained there. At the time when the sun came to enter the place where he set, then once more the moon moved. So, there, they passed each other and went each one his own way. Thus the sun cometh forth once, and spendeth the whole day [in his work]; and the moon undertaketh the night's task; he worketh all night; he doth his labor at night.

From this it appeareth, it is said, that the moon, Tecuciztecatl, would have been the sun if he had been first to cast himself into the fire; because he had presented himself first and all [his offerings] had been costly in the penances.

Here endeth this legend and fable, which was told in times past, and was in the keeping of the old people.

Third Chapter, which telleth of the stars.

The Fire Drill[7]

When [these] appeared and set forth, incense was offered and burned. Thus was it said when Yoaltecutli [and] Yacauitztli had come forth: "What will the night bring? How will the day break?"

And these were offered incense. Three times was it done: when night fell—well into the night; and when it was time to sleep—the time when the flutes were blown.[8] When this [took place], this was the time for offering their blood and offering maguey spines stained with blood. The third time incense was offered was when it dawned, when the morning broke, when the earth was visible—when morning was near.

And hence was it said that they resembled the fire drill: because when fire was drawn with a drill, and the drill bored, thus fell, ignited, and flared the fire.

785

And also for this reason all burned [spots on] their wrists; for this reason were we men burned on the wrists, to show awe of him. He was feared and dreaded. It was said and considered of any whose wrists were not burned that on his wrists fire would be drilled in the land of the dead, when he died. Therefore we men—every one—were burned on the wrists. On both sides of each wrist they arranged in order, in rows, the wrist burns. Thus they represented the fire drill. In the same manner as [the stars] were arranged in order and in line, so also they placed in order, in rows, their burns on their wrists.

[The Morning Star or Great Star]

821

Of the morning star, the great star, it was said that when first it emerged and came forth, four times it vanished and disappeared quickly. And afterwards it burst forth completely, took its place in full light,

821 became brilliant, and shone white. Like the moon's rays, so did it shine.

And when it newly emerged, much fear came over them; all were frightened. Everywhere the outlets and openings[6a] [of houses] were closed up. It was said that perchance [the light] might bring a cause of sickness, something evil, when it came to emerge. But sometimes it was regarded as benevolent.

821 782 And also [captives] were slain when it emerged, [that] it might be nourished. They sprinkled blood toward it. With the blood of captives they spattered toward it, flipping the middle finger from the thumb; they cast [the blood] as an offering; they raised it in dedication.

Fourth Chapter, which telleth of the stars.

Inic nauí Capítulo, itechpa tlatoa: in cicitlaltin.

The Comet

It was said [to be] an omen for the ruler. Because of it a ruler was to perish; perchance some person of noble lineage would die. And likewise they said that somewhere he might be imprisoned, or war would begin. Or else there would be famine. The common folk said: "Perhaps this is our hunger; perchance famine," they said.

Citlalin popoca.

The Shooting Star

It was said that the passing of a shooting star rose and fell neither without purpose nor in vain. It brought a worm to something. And of [the animal] wounded by a shooting star, they said: "It hath been wounded by a shooting star; it hath received a worm." [Such] was not to be eaten. It was looked at with fear, abhorred, and shunned. It turned one's stomach.

Citlalin tlamina.

Mitoa: amo nenquiça, amo nẽuetzi, in itlamjnaliz: tlaocuillotia. Auh in tlamintli, mitoa: citlalmjnqui, ocuillo, aocmo qualo, mauhcaitto, tlaelitto, hihielo, tetlaieltia. 821 825 262

And by night all were well protected. All covered themselves; they clothed themselves, wrapped themselves in mantles, and bound on their garments, for fear of the shooting star.

Auh in iooaltica vel nemalhuilo, neololoio, netlapacholo, nequentilo, netlalpililo: imacazo in itlaminaliz citlalin. 821

The S-Shaped Stars

[These] were apart; they appeared by themselves, shining and shimmering. And for this reason were they called *S*-shaped stars—that they were similar to and very much like a [kind of maize] tortilla which was made, or an amaranth seed tortilla. [These] were, at both ends, twisted and rounded over. They were eaten on the day Xochitl, everywhere, in each house. In all places, in men's dwellings everywhere, they were made.

Citlalsunecuilli.

Çan iioca onoc, iioca neztoc, tlanestitoc, cuecuepocatoc: Auh inic mitoa, citlalsunecuilli: ca quinenevilia, vel no iuhqui centlamantli tlachichioalli tlascalli, anoço tzoualli: nenecoc, cecentlapal quacoltic, quateuilacachtic: xuchilhuitl ipan in quaqualoia, noxiian cecencalpan: quittacutimanca, in noxiian techachan nechiuliloia. 821 262

The Scorpion Stars

In the same manner, [these] resembled and appeared in the aspect of the venomous scorpion, with upcurved tail. Arched and upcurled is its tail; wherefore [these] are called the Scorpion Stars.

The Wind

That which was known as [the wind] was addressed as Quetzalcoatl. From four directions it came, from four directions it traveled. The first place whence it came was the place from which the sun arose, which they named Tlalocan. This wind which came from there they gave the name of the Tlaloc wind. Little did it frighten men; lightly did it blow. With it, one could go in a canoe; with it one could land; with it one could cross the water.

[775]

The second place whence it came [the north] was called Mictlampa; and this was named the wind from the land of the dead. This was much feared, and caused much terror. Violently did it blow, when it set in, and the canoes could not contend with it. They could not travel forward. They could not venture forth; they could not pass across; they could not get under way in the water. Rather, all the boatmen came out and left [their craft] because of fear—those who gained their livelihoods on the water, the fishermen who used nets, or who speared [the fish]. When they saw that it was Mictlampa ehecatl which arose, then they feared evil and were troubled. They hurried, hastened, and greatly quickened their pace, plying the pole—plying it rapidly. They strained their arms, that they might come out and beach [the canoe] on the shore, on the edge of the water, near the water line. And so they said: "Often it drowneth men and sinketh canoes."

The third place whence it came [the west] was known as Cioatlampa; it was named Cioatecayotl and Cioatlampa ehecatl. Also it was called One Wind. or Maçaua; for it came from Maçauacan. And this one did not blow fiercely. Nevertheless, it was very cold. Men suffered much from [its] cold; they became livid and stiff from cold. It made them shiver; it was deadly. It made men tremble, shake, and quake; it exhausted them; it gave them stomach pains, or pains in the lungs, or the head. And yet, with it they could go ashore from the water. It did not frighten men nor terrify them.

And the fourth place whence came the wind [the south] was there from Uitztlampa. It was named Uitztlampa ehecatl. And this one was much feared and held in dread. All feared harm. It made men speechless with terror; it made them silent with fear. Because it blew swiftly, it frightened them greatly. They said: "When it arieth, it uprooteth and breaketh trees: and it teareth walls to pieces—old walls

Lightning; the Lightning Flash

They addressed it as, and named it, many things—the mist which went winding [like a serpent], the thunderbolt, the reed staff. When lighting flashed and lit up repeatedly, we were blinded, we lost our sight, our vision was darkened. It startled us; we were terrified. It was unbearable to look at; it was dazzling. Everywhere it flashed repeatedly—again and again—like the light of the dawn breaking over and over. Thus did it come; it came twisting and winding.

821
793
785

And when his feast was observed, first there was fasting for four days. The priests fasted in honor of Tlaloc in what was called the priests' house, where they had matured and grown.

Auh in icoac ilhuiquitilitoia: achtopa nauilhuitl moçaoaia, motlalocaçaoaia in tlamacazqueʼ: iñ motenoa calmecac mooapaoa, mozcaltia.

When the fourth day had passed, when the fasting had ended, when the feast had been completed, [the evildoers] were plunged and submerged repeatedly in the lake. Not soft, not gentle was the punishment. They were plunged and immersed repeatedly in the water. They ill-used only those of their own kind. They dragged [the victim] back and forth through the mud. They plunged him under the water and dragged him; they went pulling him along by the hair; they kicked him. [As] he swam under the water, churning, beating, and swirling it up as he went, he escaped the hands of the priests.

In icoac oncic nauilhuitl, in ic neoalco, in ic ilhuitl muchioa: matlampapachoaia, mopopolactiaia in uci apan: amo juiian, amo motlamachuja, in atlan onmotzotzopontitlaça, onmotzotzopontimaiaui: çan monetechuja, vncan çoquititlan quincmjtia, quipopolactia, quiauiulana: icpac cantinemi, quititilicça, atlã tlatzotzopotztinemj, aicozotztinemi, tlamoomolotztinemi: inmac mouiuitlatinemi, in tlamacazque,

When a fault had been committed in the priests' house, or some error had been done—even though someone had only stumbled, or tripped over something, at once, for this, they laid hold of him. Because of it they shut him in as their captive, no more taking their eyes from him, that they might plunge him in the water.

[535]

water, in order that they should let him go, he offered the priests something of value—either a turkey or food. In return for it they let [his son] be.

And when this came to pass, everywhere, in the houses of all, in each house, *eta·lli*[9] was eaten. Each one made *etzalli* for himself; and there was a dance in which *etzalli* was begged. With green maize stalks they danced. Those who danced the *etzalli* dance entered house after house, each one begging and asking. [The householders] offered them all this same *etzalli*, [placing it] in the small jars, the *etzalli* jars, which they bore in their hands.

These [gods] were called Tlaloca. To them were attributed clouds, rain, hail, snow, mist, sheet lightning, thunder, and lightning bolts which struck men.

The Rainbow

821 As if arched—bent and rounded—it thus appeared. Varicolored, many-hued was its appearance. The single colors which showed in it [were] green, dark green, blue green, and black; and yellow and orange or tawny; then vermillion and ruby red; and [various shades of] blue, and dark green.[10]

And they said that when it appeared it revealed, made evident to men, and denoted—whereby it was known, realized, and seen—that it would not rain; would not rain hard—would not pour. But it would break up the clouds. It would dissipate, impede, and quiet the rain—the downpour which wet, soaked, and drenched one. If clouds piled up, if heavy clouds blackened [the sky] so that everywhere it was dark, it only dissipated [them]. Although it rained, no longer was the rain heavy; no longer did it increase. It only sprinkled; it drizzled; a few drops fell; a haze, a fog, a thin mist drifted and fell. Or at most it sprinkled; the sprinkling and the spray continued.

And they said—it was averred—[that] if it appeared over maguey plants, because of it the green [leaves] yellowed, turned, dried, reddened, and withered. And also they said [that] when it appeared many times, thereby it was evident [that] the rains were to end forthwith. They said: "Soon the masters of the rain will go; already the Tlaloca are about to leave."

9. *Etzalli*: cf. Anderson and Dibble, op. cit., p. 79.

10. Sahagún (*Memorial*) has green for *xoxoctic*, *quiltic*, *quilpaltic*, *iiapaltic*, *quilpalli*, and *iiapalli*. Alonso de Molina, in his *Vocabulario de la lengua mexicana* (Julio Platzmann, ed.; Leipzig: B. G. Teubner, 1880), gives blue-green for *quilpaltic* and brown or black for *iiapaltic*. The second occurrence of this hue and of *quilpalli* is omitted in this translation. Molina translates *xochipaltic* as reddy or rose-colored. In *Memorial* one *xoxoctic*, Sahagún wrote both *chichiltic* and *iiapaltic* as red. For *tlaxoxoctic*, Molina has red or rose-colored. For *matlaltic* and *matlalli*, the *Memorial* has blue.

S: Sahagún M-S (1529-1590) 1953 NU7 Aztec NU7

Sixth Chapter. Here are mentioned the snow, the clouds, and the hail.

[Frost]

The frost [god] was called Itztlacoliuhqui. Once yearly the cold came. During the feast of Ochpaniztli the cold began. And for one hundred and twenty days—one hundred and twenty suns—this persisted and there was cold. And it ended and disappeared [during the feast] called Tititl.

When [the month] came to an end, it was said: "For the frost hath departed. Now there will be sowing—it will be the time of sowing. Already land will be planted, so that [seeds] will be placed in the soil. Already it is warm, mild, calm. Already the season is good, the time is propitious; the hour is at hand; the time is ripe; the moment hath come." [For] already they hastened and were diligent. Already there was unrest; all men would be agitated and solicitous; they would be preoccupied. No longer would there be rest. Already the days would fly;[11] already there would be the setting forth for the working of the fields, the fresh working of the soil, the reworking of the fields; already the fields would be reworked. Now there would be planting of beans; beans would be placed. Now amaranth seed would be cast broadside; amaranth would be placed. Now *chia* seed would be cast; chili plants set out and transplanted. Already off-shoots would be pruned and separated, and all would bear fruit.

Snow

It was only the servant and companion which followed, accompanied, and spread the frost over the earth. It was considered to be like the rain. And it was said that when there was snow, [crops] would be harvested; the crops would be good. It foretold, and was an omen of, [good] crops.

Kohlhammer Verlag, 1950), pp. 53, 348-349. An alternative, however, might be "men are fresh, or alert" (*chaoaz, ona*).

Our rendition of capitulum and cepaisuitl is provisional.

821
[176]

Clouds

When [clouds] billowed and formed thunderheads, and settled and hung about the mountain tops, it was said: "The Tlalocs are already coming. Now it will rain. Now the masters of the rain will sprinkle water."

Hail

It was formed and took shape when very white clouds settled on mountain tops. It was said: "Now it will hail; now our food will be hailed out."

And thus did hail fall, making a din as of rattling, beating one about the head, pelting one [as if] with stones. Thus, truly, died and were despoiled our crops. For some distance, it flattened on the ground and spread birds over the surface of the water. At that time the water dwellers went gathering for themselves; they brought in their catch.

821
789

And that it might not hail, that they might not be hailed upon, and the young maize plants might not be damaged by hail, then the [sorcerers who] cast away hail and rain drove and headed it off. They removed it from the waters [of the lake]; they showed it the way and took it [hence]. Or else they cast it forth into the deserted places, the uncultivated lands where there were no crops, no one lived, and nothing existed; poverty-ridden lands—barren lands where nothing grew, nothing issued: the land was void. It was only an abandoned place; the [very] stones were dry.

Mistli.

The Seventh Chapter telleth of the year counter and the year sign.

Inic chicome capitulo, itechpa tlatoa: in xiuhtlapoalli, in xiuhtonalli.

One Rabbit

It is said [that this was] the year sign and year counter of the south. For thirteen years it carried, set on its path, took with it, and bore the burden [of the year]. Always, during each [of the thirteen] years, it was the first, the one which led, began, made the start, and introduced as many year signs as there were: Reed, Flint, and House. Of the one [known as] Reed, it was said [that it was] as it were the sign of the east; that is, the year sign of the sun. For from there issued the light which shone forth.

And the third year sign, the one [known as] Flint, was called the sign of the north. For [the north] was said to be toward the land of the dead. Thus have the old people spoken: it is said that when one died, to that place set out, went straightway, and proceeded the dead. Therefore, when someone died—when [the sextons] adorned him, when they wrapped him in his mantle and bound him [in wrappings]—they made him look toward and seated him looking to that place.

And the fourth year sign, the fourth in order, [was] the one known as House—the sign of the west. For this reason they named it Cuatlampa: it is said that there dwelt but women; none of us men were there.

These four year signs, year count[ers], as many times as they came to appear, [so many times] they came to be the beginning year signs.

When all the thirteen-year [periods]—all four of them—had concluded, ended, and finished, thus proceeding around, to give and leave their works from year to year, this [last] one came to, stopped at, jogged, knocked against, and ended at Thirteen House, the sign of the west. That is, now it approached [the end of its] thirteen years of labor.

And then One Rabbit came to settle itself as the sign of the south. When this occurred and it established itself and began its work, thus to bear a year

And [even] when [the year] One Rabbit had not yet set in, first provision was made; our food was hidden away, stored, saved up, and placed in bins. Nothing was thrown away; all then was saved—wild seeds not commonly eaten; musty maize; corn silk; corn tassels; pulp scraped from maguey tappings, tuna cactus flowers; cooked maguey leaves; heated maguey sap.

Auh in icoac, aiamo moquetza ce tochtli: achtopa nenemachtiloia, netlatlatililo, netetzontilo, netacatilo, mocuezcomatema in tonacaiotl: aoc tle motlaça, muchicoac netlatililo in polocatl, in popoiotl, in xilotzõtli, in miiaoatl, in metzolli, in nochxochitl, in mescalli, in necutlatotonilli. 805 262

Everything was taken into account: [with] amaranth, even the weeds[12] were threshed; [as for] the beans, likewise were stored and put away unripened ones and the dried, withered ends of the green beans. and when they had used all, they satisfied and quickened themselves [with] bird seed, bitter amaranth or bright red amaranth, and *yacacolli* maize.[13]

Auh inic muchi temachiloia, in oauhtli çan yoã mosconoa in ipolocaio: in etl çan yoan motlatiaia, mocalaquiaia in iaxaoacaio, yoan in jexococoloio in opatzaoac. Auh icoac, muchi tlaiecoa, tlaacotlaça tlaihiiocuitia in petzicatl, in chichic oauhtli, anoço teuoauhtli, iacacolli:

This was the time when they bought people;[14] they purchased men for themselves. The merchants were those who had plenty, who prospered; the greedy, the well-fed man, the covetous, the niggardly, the miser, who controlled wealth and family, guardians, the mean, the stingy, the selfish. In the homes of [such men] they crowded, going into bondage, entering house after house—the orphan, the poor, the indigent, the needy, the pauper, the beggar, who were starved and famished; who just as they went to sleep, just so awoke; who found nothing and got nowhere; who in no place found their rest, relief or remedy. At this time one sold oneself. One ate oneself; one swallowed oneself. Or else one sold and delivered into bondage his beloved son, his dear child.

[For] they had incurred sins. They had taken unto themselves, and placed themselves in, great wrong, through which they went always being slaves, until at last they were to die.

And even if he died, once again some one of his kin stood surety for him. Or else his beloved son offered himself and finished for him. None were neglected. Their kin and their lineage went on continuing and extending [the obligation]; they went on paying the debt and concerning themselves [with it]. Always they fulfilled the pledge, continued taking the place of others, served for one another; they all entered the households of their lords.

If sons or grandsons were born to him, at once [their elders] assigned them their great faults. When they matured, when they gained prudence, when they looked about, already servitude would be upon them. Already they wielded the hoe, they used the tump line; already they were [as] someone else's dogs, someone else's turkeys. For in truth [slavery] had come upon them; they had come against that which they could not leave—of which they could not be rid. For their fathers, their grandfathers, their mothers, and their grandmothers had proceeded to merit for them, to acknowledge for them, to bequeath them, to load and place upon them, [their transgressions]. For difficult was that which they had left and bequeathed them in time of famine—those who hungered and starved, who no longer were proud, who no longer persevered, who indeed were sick; who had eaten themselves, had sold themselves.

[This was] because they had prepared nothing for themselves, had shown no forethought for themselves; had paid no heed, had lived in negligence, and were disposed to evil before the year sign One Rabbit had begun—[when] it had not yet set in.

Thus was it said, that their fathers and grandfathers had succumbed to One Rabbit; hence they took on great sins.

When [the year] One Rabbit had fulfilled its task, when the year had been completed, then it delivered its charge to the sign of the east: Two Reed was the one which [then] set in.

Ninth Chapter, in which is described what was called "The Binding of Our Years," or "When the Years are Bound," [which occurred] when one by one the four year signs had each reigned thirteen years and when fifty-two years had passed; and what then was done.

Inic chicuasai capitulo, vncan mitoa: in mitoa, toximmoipili, anoço inic molpilia xiuitl: yn icoac matlatlacpa omeexpa otlauicac, yn inaubteixti cecentetl xippoalli: inic onaci vmpoalxiuitl ipan matlacxiuitl omume, yoan in tlein icoac muchioaya.

When [came] the time of the binding of our years, always they gradually neared and approached [the year] Two Reed. This is to say: they then reached and ended [a period of] fifty-two years. For at that time [these years] were piled up, added one to another, and brought together; wherefore the thirteen-year [cycles] had four times made a circle,[15] as hath been made known. Hence was it said that then were tied and bound our years, and that once again the years were newly laid hold of. When it was evident that the years lay ready to burst into life, everyone took hold of them, so that once more would start forth—once again—another [period of] fifty-two years. Then [the two cycles] might proceed to reach one hundred and four years. It was called "One Old Age" when twice they had made the round, when twice the times of binding the years had come together.

Ie vncan, ie ipan in toxiuhmolpilia: muchipa ie quimattiuh, quitztiuh in vme acatl. q. n. Ca vncan aci, uncan tlami ompoalxiuitl ōmatlactli, yoā onxiuitl. Behold what was done when the years were bound—when was reached the time when they were to draw the new fire, when now its count was accomplished. First they put out fires everywhere in the country round. And the statues, hewn in either wood or stone, kept in each man's home and regarded as gods, were all cast into the water. Also [were] these [cast away]—the pestles and the [three] hearth stones [upon which the cooking pots rested]; and everywhere there was much sweeping—there was sweeping very clean. Rubbish was thrown out; none lay in any of the houses.

Izcatqui in muchioaia, icoac molpilia xiuitl; in icoac oxxioac, in vncā uetziz tlequauitl, in ie itlapoalpan: achto vel nouiian cēceuia in tletl in cematonaoac, yoan in isqtich pieloia techachā, in neteutiloia tequacuilti, in aço quauitl, anoço tetl tlaxintli, muchi atlan onmotepeoaia: No ichoatl in texolotl, in tenamaztli, yoan nouiian tlātlachpanoia, tlatetzcalolo, tlanaoac tlauico, aoctle uetztoia in techachan. 805 372

And when they drew the new fire, they drew it there at Uixachtlan, at midnight, when the night divided in half. They drew it upon the breast of a captive, and it was a well-born one on whose breast [the priest] bored the fire drill. And when a little

S: Sahagún M-S (1529-1590) 1953 NU7 Aztec NU7

Tenth Chapter, wherein is described the disposition of those who kept watch when the new fire appeared.

At nightfall, from here in Mexico, they departed. All the fire priests were arranged in order, arrayed in and wearing the garb of the gods. Each one represented and was the likeness of perhaps Quetzalcoatl, or Tlaloc, etc., or whichever one he went representing. Very deliberately, very stately, they proceeded, went spread out, and slowly moved. It was said: "They walk like gods." Thus, in deep night, they arrived there at Uixachtlan.

And the one who was the fire priest of Copulco, who drew new fire, then began there. With his hands he proceeded to bore continuously his fire drill; he went about making trials with his drill, the fire-maker.

And when it came to pass that night fell, all were frightened and filled with dread. Thus was it said: it was claimed that if fire could not be drawn, then [the sun] would bē destroyed forever; all would be ended; there would evermore be night. Nevermore would the sun come forth. Night would prevail forever, and the demons of darkness would descend, to eat men.

Hence everyone ascended the terraces; all went upon the housetops. None remained in their houses, on the ground below. And women with child put on masks of maguey leaves and took up their maguey-leaf masks. [They] placed [the women] in granaries, for they were looked upon with fear. It was said and claimed that if, truly, the new fire were not drawn, these also would eat men; [for] they would be changed into fierce beasts.

And the small children they likewise masked with maguey leaves. In truth, none [of them] could sleep, or close, shut, or [even] half-close their eyes. From time to time their mothers and fathers were [there with them]; they kept waking them, punching and nudging them, calling out to them. They woke, rolled, and nudged them. Because if they were to

sleep—it was thought—they would turn into mice; they would become mice.

Hence was heed paid only one thing; there was unwavering attention and expectation as all remained facing, with neck craned, the summit of Uixachtecatl. Everyone was apprehensive, waiting until, in time, the new fire might be drawn—until, in good time, [a flame] would burst forth and shine out. And when a little came forth, when it took fire, lit, and blazed, then it flared and burst into flames, and was visible everywhere. It was seen from afar.

[785] Then all the people quickly cut their ears, and spattered the blood repeatedly toward the fire. Although [a child] still lay in the cradle, they also cut his ears, took his blood, and spattered it [toward] the fire. Thus, it was said, everyone performed a penance.

[782] Then [the priests] slashed open [the captive's] breast. In his breast [cavity] the new fire was drawn. They opened the breast of the captive with a flint knife called *ixquauac*. Etc.

Eleventh Chapter, in which is told what they did when it was seen and was evident that the new fire burst out.

And then everyone—the priests and fire priests—took the fire from there. [Having come] from all directions, the fire priests of Mexico had been sent there, charged with the task, as well as those who had come from distant [places] everywhere—messengers and runners. For these were all only chosen ones, strong warriors, valiant men, picked as best; the fleet, the swift, who could run like the wind. Because through them they could quickly have fire come to their cities.

First, the fire brand was prepared and adorned. It was called *tlepilli*. And this the fire priests brought. Before [doing] anything else, they took it up, direct, to the top of the temple [pyramid], where was kept the image of Uitzilopochtli, and placed it in the fire holder.[27] Then they scattered and strewed white incense [over it]. And then they came down, and, also before [doing] anything further, they brought and took it direct to the priests' house, the place named Mexico.[27] Later, this was dispersed, and fires were started everywhere in each priests' house and each tribal temple; whereupon it went everywhere to each of the young men's houses. At that time all of the common folk came to the flame, hurled themselves at it, and blistered themselves as fire was taken. When thus the fire had been quickly distributed everywhere among them, each one laid a fire, and was quieted in his heart.

This same all the village fire priests did. That is, they carried the fire and made it hasten. Much did they goad [the runners] and make them hurry, so that they might speedily bring it to their homes. They hurried to give it to one another and take it from one another; in this way they went alternating with one another. Without delay, with ease, in a

short time they caused it to come and made it flare up. In a short time everywhere fires burst forth and flared up quickly. Also there they first carried and brought it direct to their temples, their priests' houses, and each of their tribal temples. Later it was divided and spread among all everywhere in each neighborhood and in the houses.

tlel, cuecuepocatiquiça: no vmpa achto quiquiti-quiça, quitlamelaoaltitiuetzi in intrupan, in incalme-cac, in incacalpulco: çatepan ic moiaoa, tepan cĩmani in nouiian tlĩtlaxilacalpan, yoan in calpan.

Twelfth Chapter, in which is told [the manner of conduct of] all the people when the new fire was taken. And, when this took place, everyone renewed his clothing and all the household goods.

Then, at this time, all renewed their household goods, the men's array, and the women's array, the mats—the mats of large, fat reeds,—and the seats. All was new which was spread about, as well as the hearth stones and the pestles. Also at this time [the men] were newly dressed and wrapped in capes. A woman—[such as she] dressed newly in their new skirts and shifts.

Thus it was said that truly the year newly started. There was much happiness and rejoicing. And they said: "For thus it is ended; thus sickness and famine have left us." Then incense was offered; [quail] were decapitated, and incense was offered. They grasped this incense ladle, and raised it in dedication to the four directions in the courtyard. Then they cast it into the hearth. Thus was incense offered.

Thereupon amaranth seed cakes overspread with honey were eaten. Then all were bidden to fast, and [it was ordered] that no one should drink from the time that it was completely light until it came to be considered midday. And when noon came, then captives and ceremonially bathed ones died. Then all rejoiced and there was feasting. Then once again fires were newly laid and placed.

And [as for] the pregnant women who had been feasted, if any of them then gave birth to and bore a child; if a boy was born as her child, they named him Molpilli, Xiuhtlalpil, Xiuhtzitzquí, Xiuhtli, Texiuh, Xiuhtlatlac, Quetzalxiuh, Xiuhquen, etc. And if [it was] a girl, Xiuhnenetl, Xiuhcue, Xiuhcoçol, etc.

And when, in the time of Moctezuma, our years were bound, he ordered that indeed everywhere should be sought a captive whose name [contained the word] *xiuitl*. Wherewever [he was], this one was to be seized. And one was taken—a man from Uexotzinco, a well-born man. He was called Xiuhtlamin,

and became a captive at Tlatilulco. The captor was named Itzcuin, and henceforth he was known as and called "Captor of Xiuhtlamin."[11] For on the breast of his captive fire was drawn by the drill, and all his body was consumed in the fire. And they made [the victim's] image of pure amaranth seed dough, so that it might represent him; they set cooked grains of maize upon it, so that they could give it to the people to eat.

THE SEVENTH BOOK TREATETH OF THE SUN, MOON, AND STARS, AND OF THE YEAR OF JUBILEE

EL 7.° LIBRO TRATA DEL SOL Y DE LUNA Y ESTRELLAS Y DEL AÑO DEL JUBILEO.[19]

First Chapter, of the sun.

821 The sun hath the quality of shining and of lighting and of casting rays from himself. He is hot and he seareth; he maketh one sweat, and turneth a man's body and face dark brown or tawny.

El sol tiene propriedad de resplandecer y de alumbrar y de echar rayos de si. Es caliente y tuesta, haze sudar pa bosco o loro el cuerpo y la cara de la persona.

821 785 782 They celebrated a feast to the sun once each year in the sign named Four Olin. And before the feast they fasted four days as the vigil of the feast. And in this feast of the sun, four times they offered incense and blood from the ears—once at sunrise, another time at midday, at the vesper hour, and when [the sun had] set.

Hazian fiesta al sol vna vez cada año en el signo que se llama 4. olin. Y antes de la fiesta ayunavan quatro dias como vigilia de la fiesta. Y en esta fiesta del sol ofrecian encienso y sãgre de las orejas quatro vezes: vna en saliendo el sol, otra al medio dia, y a la hora de visperas y qñ se ponia.

33. Ytzcaliui. t. itzcaliuhtica in noyollo: My heart is calmed, or rested, in love. Pret., oitzcaliuh. oitzcaliuhticatca.

33. ytzcaliui. t. itzcaliuhtica yn noyollo. refriarse o declino mi coraçon en el amor. ꝑt.° oitzcaliuh. oitzcaliuhticatca.

34. Vel cen tecomatl in ad econtzineuh: A whole gourd[ful of water] was overturned while being drunk.

34. Vel cen tecomatl ỹ ad econtzineuh. trastornose vna xicara ẽtera beuiẽdola.

821 And when he came forth in the morning, they said: "Now the sun starteth his work. How will it be? What will come to pass on this day?"

Y quando a la mañana salia dezian ya comiença el sol su obra que sera, que acontecera ẽ este dia.

And at sunset they said: "The sun hath ended his work, or task." Sometimes when the sun riseth, he seemeth blood-colored; and at times whitish; and sometimes he riseth sickly-hued because of the mist or the clouds which cover him.

Y a la puesta del sol, dezian acabo su obra, o su tarea el sol. A las vezes qñ sale el sol pareçe de color de sangre: y a las vezes parece blanquezino: y a las vezes sale de color enfermizo por razon de las nieblas o de las nubes que se le añponẽ.

When the sun is eclipsed, he turneth red; it seemeth that the sun becometh disquieted, or troubled; or he moveth to and fro, or he stirreth. And he turneth very yellow.

Quando se eclipsa el sol parase colorado parece que se desasosiega o se turba el sol, o se remeçe, o rebuelue y amarillecese mucho.

821 When the people see this, they then raise a tumult.

Quando esto vee la gente luego se alborota.

785 And a great fear taketh them, and then the women

Y tomales gran temor, y luego las mugeres lloran a

782 weep aloud. And the men cry out, [at the same time] striking their mouths with [the palms of] their hands. And everywhere great shouts and cries and howls were raised. And then they hunted out men of fair hair and white faces; and they sacrificed them to the sun. And also they sacrificed captives, and they anointed themselves with the blood of their [own] ears. And, besides, they bored [the lobes of]

vozes. Y los hombres dan grita hiriendo las bocas con la mano. Y en todas ptes se dauã grandes bozes y gritos, y alaridos. Y luego buscavan los hombres de cabellos blancos y caras blãcas: y los sacrificauan al sol. Y tambien sacrificauan captiuos y se vntauã con la sangre de las orejas: y tambien agujerauan las orejas con puntas de maguei y pusuan mimbres o cosa semejante por los agujeros q̃ las puntas avian

The Calendar Wheel

805

This table placed above [opposite] is the year count, and it is a most ancient thing. They say that its inventor was Quetzalcoatl. It proceedeth in this way: they begin with the east, which is where the reeds are (or, according to others, with the south, where the rabbit is) and say One Reed. And thence they go to the north, where the flint is, and they say Two Flint Knife. Then they go to the west, where the house is, and there they say Three House. And then they go to the north, which is where the rabbit is, and they say Four Rabbit. And then they turn to the east, and say Five Reed. And thus they go, making four revolutions, until they reach thirteen, so that they end where they began. And then they return to one, saying One Flint Knife. And in this way, making revolutions, they assign thirteen years to each of the characters, or to each of the four quarters of the world. And then fifty-two years are completed, which is a bundle of years, when the Jubilee is celebrated and new fire is made in the manner set forth above [Chapters 9-12]. Then they again count as at the beginning. It should be noted that they disagree a great deal, in various places, as to the beginning of the year. In some parts, they told me that it began at some date in January; in others, that [it was] at the beginning of February; in others, that [it was] some time in March. In Tlatilulco I gathered together many old men, the most able ones whom I could secure, and, along with the most able of the college students, this matter was discussed for many days. And they all concluded that the year began on the second day of February.

Esta table, arriba puesta: es la cuenta de los años, y es cosa ântiquissima. Dizen, que el inuentor della, fue Quetzalcoatl: procede desta manera: que comiençan del Oriente, que es donde està las cañas: y segun otros, del medio dia, donde esta el conejo, y dizen ce acatl: y de alli van al Norte, donde esta el pedernal, y dizen vme tecpatl: luego van al occidente, donde esta la Casa, y alli dizen iey calli: y luego van al abrego, que es donde esta el conejo, y dizen naui tochtli: y luego tornan al oriente, y dizen macuilli acatl. Y ansi van dando quatro bueltas, hasta que llegan a treze, que se acaban a donde començo: y luego bueluen a vno, diziendo ce tecpatl. I desta manera, dando bueltas: dan treze años, a cada vno de los caracteres, o a cada vna, de las quatro partes, del mundo. I entôce, se cumplen. 52. años, que es vna gauilla de años: donde se celebra, el Iubileo, y se saca lumbre nueua, en la forma arriba puesta: luego bueluen a contar como de principio. Es de notar, que discrepan mucho, en diuersos lugares del principio del año: en vnas partes me dixeron, que començaua a tantos de Enero: en otras, que a primero de hebrero: en otras, que a tantos de Março: En el tlatilulco, junte muchos viejos: los mas diestros, que yo pude auer, y juntamente, con los mas habiles de los colegiales, se alterco esta materia por muchos dias: y todos ellos concluyeron, que començaua el año, segûdo dia de Hebrero.

29. The calendar wheel

The reader might assume four spirals instead of the concentric lines shown. Beginning at the center with One Rabbit, proceed to Two Reed, Three Flint Knife, Four House, Five Rabbit, etc., and end at the outside circumference with Thirteen Rabbit. Begin again at the center with One Reed and proceed as before to the outside circumference at Thirteen Reed; and so on until the fourth spiral, which begins with One House, ends with Thirteen House, thus completing the fifty-two-year series.

539

This is the tale of the rabbit which is in the moon. They say that the gods played tricks on the moon, and struck him in the face with a rabbit; and the rabbit remained marked upon his face. And with it they darkened his face as if with a veil. Thereafter he came forth to light the world. They said that, before there was day in the world, the gods came together in that place which is named Teotihuacan (which is the town of San Juan, between Chiconauhtlan and Otumba). They said to one another: "O gods, who will have the burden of lighting the world?" Then to these words answered a god named Tecuciztecatl, and he said: "I shall take the burden of lighting the world." Then once more the gods spoke, and they said: "Who will be another?" Then they looked at one another, and deliberated on who the other would be. And none of them dared offer himself for that office; all were afraid and declined. One of the gods, to whom no one was paying attention, and who was covered with pustules, did not speak but listened to what the other gods were saying. And the others spoke to him and said to him:

La fabula del concio que esta en la luna: a esta. Dizen, que los dioses se burlaron con la luna y dieronla con vn concio en la cara, y quedole el concio señalado en la cara: y con esto le escurecieron la cara como con vn cardenal. Despues desto salio pa alumbrar al mundo. Dezian, que antes que ouiese dia en el mundo que iuntaron los dioses en aquel lugar que se llama teutioacã, (que es el pueblo de San Juan entre chicunauhtlan y otumba) dixeron los vnos a los otros. Dioses, quien tendra cargo de alumbrar al mundo? luego a estas palabras respondio vn dios que se llamaua Tecuciztecatl y dixo. Yo tomo a cargo de alumbrar al mundo. Luego otra vez hablaron los dioses y dixeron quien sera otro? Luego se miraro los vnos a los otros, y conferian quien seria el otro. Y ninguno dellos osaua ofrecerse a aquel ofi.° todos temian y se escusavan. Vno dellos dioses de q̃ no se hazia cuẽta y era buboso, no hablaua sino oya lo que los otros dioses dezian. Y los otros hablaronle y dixerõle: Se tu el que alumbres buboso. Y el de buena voluntad obedecio a lo que le mandaron y respondio, en nrd reçibo lo que me aveis mandado

539 "You be the one who is to give light, little pustule-covered one." And right willingly he obeyed what they commanded, and he answered: "Thankfully I accept what you have commanded me [to do]. Let it be [as you say]." And then both began to perform penances for four days.

se assi. Y luego los dos començaron a hazer penitencia quatro dias.

And then they lit a fire in the hearth which was made on a crag (which now they call *teotexcalli*). [As for] the god named Tecuciztecatl, all which he offered was costly. Instead of branches he offered precious feathers named *quetzalli*. And instead of balls of straw he offered balls of gold. And instead of maguey spines he offered spines made of precious stones. And instead of bloodied spines, he offered spines made of red coral. And the copal incense which he offered was very good. And the pustule-covered one, who was named Nanauatzin, in place of branches offered green rushes tied in threes—in all amounting to nine. And he offered balls of straw and maguey spines, and he bloodied them with his own blood. And instead of copal incense he offered the scabs from his pustules. For each of these was raised a tower like a mountain. On these same mountains they did penance four nights. (Today these moun-

Y luego encendieron fuego ẽ el hogar el qual era hecho ẽ vna peña (que agora llaman teutexcalli). El dios llamado Tececiztecatl todo lo que ofrecia era precioso: en lugar de ramos ofrecia plumas ricas que se llamã quetzalli. Y en lugar de pelotas de heno, ofrecia pelotas de oro: y en lugar de espinas de maguei ofrecia espinas hechas de piedras preciosas: y en lugar de espinas ẽsangrentadas, ofrecia espinas hechas de coral colorado: y el copal que ofrecia era muy bueno. Y el buboso que se llamaua Nanauatzin en lugar de ramos ofrecia cañas verd's atadas de tres en tres, todas ellas llegauan a nueue: y ofrecia bulas de heno y espinas de maguei, y ensangrentaualas con su misma sangre: y ẽ lugar de copal ofrecia las postillas de las bobas. A cada vno destos se les edifico vna torre como mõte, en los mismos montes hizierõ penitencia quatro noches agora se llamã estos mõtes tzacualli. estan ambos cabe el pu.° de s. tains are called *zacualli;* they are both near the town of San Juan, which is called Teotihuacan.) After they ended their four nights of penance, then they threw away the branches and all else with which they had performed penances.

This was done at the end, or at the conclusion, of the penitence, when, the next night—at midnight—they were to begin to perform their offices. And a little before midnight [the other gods] gave them their adornment. To the one named Tecuciztecatl they gave a feather [headdress] called *axtacomitl* and a linen jacket. And [as for] the pustule-covered one named Nanauatzin, they covered his head with [a] paper [headdress] called *amatzontli,* and put upon him a stole of paper and a paper breech clout. And midnight having come, all the gods placed themselves about the hearth, called *teotexcalli.* In this place the fire blazed four days. The aforementioned gods arranged themselves in two rows, some at one side of the fire, some at the other side. And then the two [gods] above mentioned placed themselves before the fire, facing the fire, between the two rows of gods, all of whom were standing. And then the gods

tiuacã. Desque se acabaron las quatro noches de su poja, luego echarõ por ay los ramos

y todo lo de mas con que hizieron la poja. Esto se hizo al fin, o al remate de su poja, quando la noche siguiẽte a la media noche avian de começar a hazer sus oficios. Y ante vn poco de la media noche diceonles sus adereços. A aquel que se llamava tecuciztecatl dierõ vn plumaje llamado axtacomitl y vna xaqueta de lienço: y al buboso que se llama nanavatzin tocaronle la cabeça cõ papel q̃ se llama amatzontli, y pusierõle vna stola de papel y vn maxtli de papel. Y llegada la media noche todos los dioses se pusieron en deredor del hogar que se llama teutexcalli en este lugar ardio el fuego quatro dias: ordenaronse los dhos dioses en dos rencles, vnos de la vna pte del fuego, otros de la otra pte. Y luego los dos sobredhos se pusieron delante del fuego, las caras hazia el fuego en medio de las dos rencles de los dioses: los quales todos estuuã leuãtados. Y luego hablaron los dioses y dixeron a tecuciztecatl. Ea pues

spoke, and said to Tecucistecatl: "How now, Tecucistecatl! Go into the fire!" And then he braced himself to cast himself into the fire.

And since the fire was large and blazed high, as he felt the great heat of the fire, he became frightened and dared not cast himself into the fire. He turned back. Once more he turned to throw himself into the fire, making an effort and drawing nearer, to cast himself into the flames. But, feeling the great heat, he held back and dared not cast himself [into it]. Four times he tried, but never let himself go. A rule [had been] made not to try more than four times. Since he had tried four times, the gods then spoke to Nanauatzin, and said to him: "How now, Nanauatzin! You try!" And when the gods had addressed him, he exerted himself, and with closed eyes undertook [the ordeal] and cast himself into the flames. And then he began to crackle and pop in the fire like one who is roasted.

tecucistecatl entra tu en el fuego. Y el luego acometio pa echarse en el fuego.

Y como el fuego era grande y estaua muy encendido, como sintio el gran calor del fuego, ouo miedo no oso echarse en el fuego, boluiose atras: otra vez torno para echarse en el fuego haziendose fuerça, y llegandose mas acerca para echarse en el fuego: pero sintiendo el calor grande detuuose, no oso echarse. Quatro vezes prouo, pero nunca se dejo echar: estaua puesto mãdamj.° que no prouarse mas de quatro vezes. Desque ouo prouado quatro vezes los dioses luego hablaron a nanauatzin y dizeronle. Ea pues nanauatzin prueua tu. Y comoo le ouieron hablado los dioses, esforçose y cerrado los ojos arremetio y echose en el fuego. Y luego començo a rechinar y respendar en el fuego como quien se asa. Y como vio tecucistecatl

539 And when Tecuciztecatl saw that [Nanauatzin] had cast himself into the flames, and was burning, he gathered himself [for the ordeal] and threw himself into the fire. And it is said that an eagle entered the blaze and also burned itself; and for that reason it has dark brown or blackened feathers. Finally a tiger [ocelot] entered; it did not burn itself, but [only] singed itself; and for that reason remained stained black and white. From here was taken the custom of calling men dexterous in war *quauhtlocelotl*. And they said *quauhtli* first, because the eagle first entered the flames. And last *ocelotl* is said, because the tiger [ocelot] entered the fire after the eagle. After both [the gods] had thrown themselves into the fire, and after they had burned, then the gods seated themselves to wait [to see] from what direction Nanaua[tzin] would come to rise.

que se avia echado en el fuego y ardia, arremetio y echose en el fuego. Y diuque luego vna aguila entro en el fuego y tambien se quemo: y por esso tiene las plumas hoscas o negrestinas. A la postre entro vn tigre no se quemo sino chamascose: y por esso q̃do manchado de negro y blanco. Deste lugar se tomo la costumbre de llamar a los hombres diestros en la guerra quauhtlocelotl. Y disen primero quauhtli porque el aguila p'mero entro en el fuego. Y discse a la postre ocelotl porque el tigre entro en el fuego a la postre del aguila. Despues que ambos se ouieron arrojado en el fuego, y despues que se ouierõ quemado: luego los dioses se sentaron a esperar a que pte vendria salir el nanaua. Despues que estuuiero grã rato esperando,

21. Numbering in the text and commentary is confused in the original. No. 44 is skipped in both columns. Numbers are indefinite. To correspond with the numbering in the column of notes, we skip from 39 to 40 in the Aztec column.

539 After they had waited a long time, the heavens began to redden, and in every quarter the dawn appeared. And they say that after this the gods knelt down to wait [to see] where Nanaua[tzin], become sun, would rise. In every direction they looked, turning about. They never succeeded in guessing or saying from what quarter he would rise. They agreed in nothing. Some thought that he would come up in the north, and stood up to look there. Others stood to look toward the west; others to the south. They conjectured that he was to come forth in all directions, because at all the cardinal points there was the brilliance of the dawn. Others placed themselves so as to look to the east. They said: "Here, from this direction, the sun must rise." The declaration of these was true. They say that those who looked to the east were Quetzalcoatl; a second named Ehecatl; and another named Totec, or, by another name Anauatl itecu, and by [still] another name, Tlatlauic Tezcatlipoca; and others called Mimixcoa, who are without number; and four women, one named Tiacapan, another Teicu, a third Tlacoyeua, and a fourth Xocoyotl.

Començose a parar colorado el cielo: y en toda pte aparecio la luz d'l alua. Y dizen que despues desto, los dioses se hincaron de rodillas pa esperar adonde saldria nanava hecho sol, a todas ptes mirauan boluiendose en rededor, nun acertaron a pensar ni a dezir a que pte saldria, en ninguna cosa se determinaron. Algunos pensaron que saldria de la pte del norte y paronse a mirar hazia alla: otros se pararon a mirar hazia el poniente: otros hazia el medio dia: a todas ptes sospecharon que avia de salir, porque a todas ptes avia resplandor del alua: otros se pusieron a mirar hazia el oriente dizeron aqui desta pte a de salir el sol: el dho destos fue verdadero. dizen que los que miraron hazia el oriente fueron Quetzalcoatl el 2.° que llama hecatl y otro que se llama totec y por otro nõbre anavatl ytecu y por otro nombre tlatlauic tezcatlipuca: y otros que se llamã mimixcoa que son inumerables: y quatro mugeres, la vna se llama tiacapã, la otra teycu, la tercera tlalcoyeua, la quarta xocoyotl.

539

And when the sun came to rise, he looked very red. He appeared to waddle from one side to the other. None could look at him, because he snatched sight from the eyes. He shone and cast rays [of light] from himself in grand style. His light and his rays he poured forth in all directions. And thereafter the moon rose, in the same quarter, the east, like the sun. First the sun came forth, and after him came out the moon; in the order that they entered the fire, in [that] same [order] they came out made sun and moon. And those who tell stories or tales say that they had equal light with which they illuminated [the world]. And when the gods saw that they shed equal brilliance, they again spoke among themselves, and said: "O gods, how shall this be? Will it be well that both go alike? Will it be well that they illuminate equally?" And the gods gave a command, and said: "Let it be thus; let it be thus done." And then one of them went running and with a rabbit struck Tecuciztecatl in the face. He darkened his face and deadened [its] brilliance, and his face remained as it is today.

Y quando vino ꝑ salir el sol, parecio muy colorado, parecia que se cõtoneava de vna pte a otra, nadie lo podia mirar porque quitaua la vista de los ojos, resplandecia y echava rayos de si en grã manera su luz y sus rayos se derramo por todas ptes. Y despues salio la lũa en la misma pte del oriente a par del sol: Primero salio el sol y tras el salio la luna, por la orden que entraron en el fuego por la mesma salierõ hechos sol y luna. Y dizen los q̃ cuẽtan fabulas o hablillas que tenian ygual luz con que alumbrauan y desque vieron los dioses que ygualmente resplandecian, hablaronse otra vez y dixeron. O dioses como sera esto? sera bien que vayan ambos a la par? sera bien que ygualmente alumbren? Y los dioses dieron sñia y dixeron. Sea desta manera, hagase desta manera. Y luego vno dellos fue corriendo y dio con vn conejo en la cara a tecuciztecatl escureciole la cara y amatole el resplandor y quedo como agora esta su cara. Despues que ouieron salido ambos sobre la tfra,

After both had come forth over the earth, the sun and moon remained still, without moving from one

estuuieron quedos sin mudarse de vn lugar sol y la luna. Y los dioses otra vez se hablaron y dixeron.

place. And the gods once more spoke, and said: "How may we live? The sun does not move himself! Are we to live among the peasants? Let us all die and make him revive through our death!" And then the Wind took charge of killing all the gods, and he slew them. And it is told that one, named Xolotl, refused to die, and said to the gods: "O gods, let me not die." And he wept exceedingly, so that his eyes swelled with weeping. And when the slayer came to him, he hid in the maize fields, and he changed and turned [824] himself into the foot of a maize plant which has two stalks, and the field workers call it *xolotl*. And he was seen and found among the feet of the maize stalks. Again he took flight and hid among the maguey plants, and changed himself into a maguey plant which has two bodies, which is called *mexolotl*. Once more he was seen, and he took flight and placed himself in the water and made himself into a fish which is called *axolotl*. From there they took him and slew him. And they say that although the gods were slain, not on that account did the sun move. And then the Wind began to blow and raise a strong gale. He made him move, so that he might go on his way. And after the sun began to travel, the moon was quiet in the place where he was.

Como podemos biuir no se menea el sol, emos d' biuir entre los villanos? muramos todos y hagamosle q̃ resucite por nr̃a muerte. Y luego ayre se encargo de matar a todos los dioses, y matolos. Y dizese que vno llamado Xolotl rehusava la muerte, y dixo a los dioses. O dioses no muera yo y lloraua gran manera de manera que se le hincharon los ojos de llorar. Y quando llego a el el q̃ mataua hecho a huyr, secondiose entre los mayzales, y boluiose y con[ver]tiose en pie de mayz q̃ tiene dos cañas y los labradores le llaman xolotl. Y fue visto y hallado entre los pies del mayz, otra vez hecho a huyr y se escondio entre los magueys y convertiose en maguey que tiene dos cuerpos, q̃ se llama mexolotl: otra vez fue visto y hecho a huyr y metiose en el agua y hizose pez q̃ se llama axolotl de alla le tomaron y le mataron. Y dizen que avnque fueron muertos los dioses no por esso se mouio el sol y luego el viento començo a suflar o ventear reziamente: el le hizo mouerse pa que anduuiese su camino. Y despues q̃ el sol començo a caminar, la lũa se estuuo queda en el lugar donde estaua.

539 After the sun had set, the moon began to move. Thus the one got away from the other. And thus they come forth at different times. The sun endureth one day, and the moon worketh at night (or illuminateth at night). From this cometh what is said: that Tecuciztecatl would have been the sun if he had cast himself first into the fire, because he was named first, and offered precious things in his penance.

Despues que el sol se puso començo la luna a andar: desta manera se deuiaron el vno del otro: y assi salen ẽ diuersos tiempos. El sol dura vn dia y la luna trabaia en la noche o alumbra en la noche. De aqui parece lo que se dize q̃ el tecuciztecatl avia de ser sol si p'mero se ouiera echado en el fuego porque el p'mero fue nõbrado y ofrecio cosas preciosas en su pñia.

Eclipse of the Moon.

821 When the moon is eclipsed, he becometh almost dark; he becometh blackened; he turneth a dark brown. Then the earth darkeneth. When this cometh to pass, women with child feared miscarriage. A great dread seized them that that which they had in their bodies would become mice. And as a remedy for this they took a piece of obsidian in the mouth or they placed it in the girdle over the belly and [did so] in order that the children [whom they carried] in the womb would not be born lipless or noseless or wry-mouthed, or cross-eyed, or that [one] might not be born monstrous.

[843 751]

Quando la luna se eclipsa parase casi oscura, ennegrecese, parase hosca: luego se escurese la tierra. Quando esto aconteçe las preñadas temian de abortar, tomauales gran temor que lo q̃ tenian en el cuerpo se a de boluer raton. Y para remedio desto tomavan vn pedaço de yztli ẽ la boca o ponianle en la çintura sobre el vientre y para que los ninos que en el vientre no saliesen sin beços o sin narizes, o boquimuertos, o bizgos: o porq̃ no naciese monstro.

The people of Xaltocan held the moon as a god and made him special offerings and sacrifices.

Los de xaltoca tenian por dios a la luna y le hazia particulares ofrendas y sacrificios.

Third Chapter, of the Stars Called Castor and Pollux.

821
782

These people paid particular reverence and [made] special sacrifices to Castor and Pollux, in the sky, which move near the Pleiades, which are in the sign of Taurus. They made these sacrifices and ceremonies when [the stars] newly appeared to the east after sunset. After having offered incense, they said: "Now [hath] Yoaltecutli come forth, and Yacauiztli. What will come to pass this night? Or what end will the night have—fortunate or adverse?" Three times they offered incense (and [this] must be because they are three stars), the first time at the first quarter of the night, another time at ten, and the third [time] when it beginneth to be morning.—They name these stars *mamalhuaztli*, and by that same name they call the sticks with which they drill a fire; because it seemeth to them that they somewhat resemble [the stars] and that from them there came to them this manner of producing fire. From this it was customary that the

787

The star Venus these people named Citlalpol or Uey citlalin, and they said that when it riseth in the east it maketh four assaults. The [first] three times it shineth little and hideth again; and at the fourth it cometh forth with all its brightness and followeth its course. And they say of its light that it is like that of the moon. On its first assault they held it an omen of evil, saying that it brought sickness with it. And therefore they shut the doors and windows so that its light might not come in. And sometimes they took it as a good omen. And at the beginning of the time that it started to appear to the east, they slew captive men in reverence to it, and offered it their blood, sprinkling it toward [the star] with their fingers.

A la estrella de venus la llamaua esta gente citlalpul, vey citlalli y dezian que quando sale por el oriente hase quatro arremetidas, y a las tres luze poco y buelvese a esconder: y a la quarta sale con toda su claridad y procede por su curso. y dizen de su luz que parece a la de la luna. En primera arremetida teníanla de mal agouro diziendo que traya enfermedad consigo, y por esto cerravan las puertas y ventanas porq̃ no entrase su luz. Y a las vezes la tomavan por buen agouro. Y al p'ncipio de tpo que començaua a aparecer por el oriente matauan hombres captiuos por su reuerencia, y ofreciaule la sangre salpicando hacia ella con los dedos.

[176]

These people attributed the wind to a god whom they named Quetzalcoatl, something like god of the wind. The wind bloweth from the four quarters of the world by command of this god, according to what they said. The first quarter it cometh from is from the east, where they say is the terrestrial paradise which they call Tlalocan. This wind they called Tlalocayotl. It is not a furious gale; when it bloweth, it doth not hinder the canoes from moving on the water. The second wind bloweth from the north, where they say hell is; and hence they name it Mictlampa ehecatl, which meaneth the infernal wind. *In hin uel imacazo*, etc.: this wind is violent, and therefore they fear it greatly. When it bloweth, canoes cannot go on the water. And all which are on the water come out with all the speed they can [muster] because of fear when it bloweth; for often they are endangered by it. The third wind bloweth from the west, where they said was the abode of the Amazons. They called it Ciuatlampa ehecatl or Ciuatecayotl, which is to say wind which bloweth from where the women abide. This wind is not savage, but it is cold. It maketh one tremble with cold. With this wind, navigation is good. The fourth wind bloweth from the south, and they name it Uitz-

Esta gente atribuia el viento a vn dios q̃ llamauan quetzalcoatl bien asi como dios de los vientos. Sofla el viento de quatro ptes del mundo por mandamiento deste dios segun ellos dezian. De la vna pte viene de hazia el oriente, donde ellos dizen estar el payso terrenal al qual llaman tlalocan. A este viento la llamauan tlalocayotl: no es viento furioso, quando el sofla no impide las canoas andar por el agua. El segundo viento sofla de hazia el norte donde ellos dizen estar el infierno y asi le llaman mictlampa ehecatl que q. d. el viento infernal. Yn hin vel ymacazo etc. este viento es furioso y por eso le temen mucho quando el sofla no pueden andar las canoas por el agua. Y todos los que andan por el agua se salen por temor qñ el sofla con toda priesa que puedẽ porque muchas vezes peligran con el. El tercero viento sofla de hazia el occidente donde ellos dezian que era la abitacion de las amaçonas llamauanle ciuatlampa ehecatl o ciuatecayotl que q. d. viento que sofla de donde abitan las mugeres. este viento no es furioso: pero es frio, haze templar de frio con este viento bien se nauegan El quarto viento sofla de hazia el medio dia y llamanle vitztlãpa ehecatl q. d. viento q̃ sofla de aquella pte donde fueron los dioses que llaman vitzitznava: este viento en estas ptes es furioso,

82 | tlampa chocatl, which meaneth wind blowing from that quarter where went the gods whom they call the Uuiztznaua. This wind, in these parts, is violent, dangerous for boating. Such is its fury sometimes that it uprooteth trees and overturneth walls, and raiseth great waves in the water. Canoes which it meeteth in the water it casteth to the bottom or raiseth high. It is savage like the arctic or north [wind].

peligroso pa nauegar, tanta es su furia a algũas vezes que arancan los arboles y trastornan las paredes, y leuanta grandes olas en el agua las canoas que topa en el agua echalas a fundo o las leuanta en alto, esta furioso como el cierço o norte.

[776]

Variously they named the sheet lightning or thunder bolts. They attributed them to the Tlalocs or *tlamacazque*. They said that these made the thunderbolts and sheet lightning and peals of thunder, and [that] they smote with them whomsoever they would.

Por diversos nombres nombran al relampago o rayo atribuyẽle a los tlaloques o tlamacaces. Dezian que ellos hazian los rayos y relampagos y truenos y ellos herian con ellos a quien querian.

[776]

Fifth Chapter

Clouds and rain these natives attributed to a god whom they called Tlalocan tecutli, who had many other [gods] under his command, who were named Tlalocs and *tlamacazque*. These [people] thought that they created all things needed for the body, such as maize and beans, etc.; and that they sent the rains so that all things growing in the earth would

Las nubes y las pluuias atribuianlas estos naturales a vn dios que llamauan tlaloca tecutli, el qual tenia muchos otros debaxo de su dominio a los quales llamauan tlaloque y tlamacazque. Estos pensauan que criauan todas las cosas necesarias pa el cuerpo como mayz y frisoles etc. Y que ellos embiauan las pluuias para que naciesen todas las cosas que se crian

793

And if he tried to rise, by force they again pushed him under the water, until they almost drowned him. They who, in the house called *calmecac*, committed some fault—like breaking some vessel, or some such thing—these they seized and kept under guard in order to punish them on that day. And sometimes the parents of him who was thus detained gave chickens or capes or other things to the priests so that they would let [him] go and not drown [him]. To those whom they thus illtreated, neither their parents nor their kin dared show favor nor speak for them, if previously they had not freed them while they were imprisoned; and so badly did they treat [the victims] that they even left them almost for dead cast on the brink of the water. Then their parents took them up and carried them to their houses. In this feast of these gods, all the common folk ate maize boiled like rice. And the priests went dancing and singing through the streets. In one hand they carried a stalk of green maize, and in the other a pot with a handle. In this way they went asking that [the householders] give them boiled maize. And all the common folk cast that boiled maize into the pots which they carried.

y si se queria leuantar tornauãle por fuerça, a meter debaxo del agua hasta que casi le ahogauã. Los que en la casa llamada calmecac hazian algun defecto como es quebrar alguna basija o cosa semejante los prendian y tenian guardados para castigallos aquel dia. Y algunas vezes los padres del que asi estaua preso daban galinas, o mantas o otras cosas a los tlamacaces porque lo soltasen y no le ahogasen. A los que maltrataua desta manera ni sus padres ni sus parientes osauan favorecellos ni hablar por ellos si antes no los avian librado estãdo presos y tanto los maltrataua hasta que los dexaua casi por muertos arrojados a la orilla del agua. Entonces los tomauan sus padres y los llevauan a sus casas. En esta fiesta destos dioses todos los macehuales comian mayz cozido hecho como arroz. Y los tlamacaces andauan bayllando y cantando por las calles en vna mano trayan vña caña de mayz verde y en otra vna olla con asa por este modo andauã demandando que les diesen mayz cozido y todos los macehuales les echauan en las ollas que trayan de aquel mayz cozido.

They said that these gods 2 made the clouds, the rains, and hail, snow, peals of thunder, sheet lightning, and thunderbolts.

Estos dioses dezian que hazian las nubes y las lluuias, y el granizo, y la nieue, y los truenos y los relampagos y los rayos.

821

The rainbow is something like an arch of hewn stone. It showeth divers colors. When it appeareth, it is a sign of clear weather.

El arco del cielo es a manera de arco de canteria tiene aparencia de diuersos colores. quando aparece es señal de serenidad.

CONTENTS

EIGHTH BOOK

Page

First Chapter, which telleth of the rulers and governors who reigned in Mexico from the beginning of [their] rule until the year 1560..... 1

Second Chapter, which telleth of the rulers who governed in Tlatilulco when the reign had not yet perished and when, later, once again the Spaniards gave back and restored [it] to them, until the year 1560..... 7

Third Chapter, where are told the rulers of Texcoco, and as many years as they governed..... 9

Fourth Chapter, in which are recorded the rulers of Uexotla..... 13

Fifth Chapter, in which it is told how many four hundreds of years ago Tollan was destroyed, up to [the present] year of 1565..... 15

Sixth Chapter, in which it is told how signs and omens appeared and were seen, when the Spaniards had not yet come to this land, and when they were yet unknown to the dwellers here..... 17

Seventh Chapter, in which are told many things which came to pass when the Spaniards had not yet come to this land, until the year '50..... 21

Eighth Chapter, in which are told the various articles with which they adorned the rulers and noblemen—which they placed on them when they were bedight in capes and breech clouts..... 23

Ninth Chapter, in which is told that with which the rulers were arrayed when they danced..... 27

Tenth Chapter, in which is told how the rulers took their pleasure..... 29

Eleventh Chapter. Here it is told what the rulers rested upon..... 31

Twelfth Chapter, in which it is told how the rulers were arrayed whom they sent to the wars..... 33

Thirteenth Chapter. Here are told the foods which the lords ate..... 37

Fourteenth Chapter: here are described the palace and the houses of the lords; how were kept the houses of the lords [and] the great palace where the ruler dwelt; [how] all the lords were disposed there, and there were determined the tributes or warfare; and in that place there was eating and drinking when the ruler assembled the people there.... 41

Fifteenth Chapter, in which is described the adornment of the women.... 47

The sixth ruler of Tenochtitlan.

Axayacatl was the sixth, and ruled Tenochtitlan fourteen years. It came to pass in his reign that there was war between the people of Tlatilulco and those of Tenochtitlan. As a result of the struggle, the reign of Tlatilulco then came to an end. For forty-six years no one else reigned in Tlatilulco. And when the war was waged, he who was ruling Tlatilulco was named Moquiuixtli.

And this Axayacatl conquered Tlacotepec, and Callimaya, and Metepec, Calliztlauacan, Ecatepec, Cozcaquauhtenanco, Teotenanco, Malinaltenanco, Tzinacantepec, Coatepec, Cuitlapilco, Teoxauaten, Tequaloian, and Ocuillan.

The eighth ruler of Tenochtitlan.

Auitzotl was the eighth, and he ruled Tenochtitlan
[312] for eighteen years. When he was ruler, Mexico was flooded. By his command it was done; five springs were opened, known as Acuecuexatl, Tlillatl, Uitzillatl, Xochcatl, and Coaatl, which were in the territory of Coyoacan and Uitzilopochco.[1] When Mexico was flooded, four years were still to pass before Auitzotl died. And when the Spaniards came here, it was already twenty-two years before that Mexico had been flooded.

And it came to pass in his time that the sun was eclipsed, at midday. For about five hours the darkness was overspread; the stars appeared. All were much terrified. It was said: "The demons of darkness will descend; they will eat people."

And he conquered these of Tziuhcoac, and Mollanca, Thapan, Chiapan, Xaltepec, Izoatlan, Xochtlan, Amaxtlan, Mapachtepec, Xoconochco, Ayotlan, Maçatlan, and Coyoacan.

1. Source for coioacatl. The Real Academia de la Historia MS has ỹ coaatl for coioa.

titlan for nineteen years. In his reign there came a famine; for two years[2] it spread over the land, during which it rained no more. Because of it the people of Mexico dispersed everywhere, and there was great suffering from hunger.

In the reign of this same [ruler] it happened that there in the song house which was in Tenochtitlan, a beam, which pierced the walls which held it, sang.[3] It intoned, "Woe, my evil rump! Dance well, for thou shalt be cast into the water!" This came to pass when [the fame of] the Spaniards came to be known.

In the days of this same [ruler] it happened that [the demon] Cinacostl went about weeping, at night. Everyone heard it wailing and saying: "My beloved sons, now I am about to leave you."

In the reign of the same [ruler] this came to pass. A woman of quality, whose home was in Tenochtitlan, died of a sickness. She was buried then in her courtyard, and they laid stones over [her grave]. Four days after the dead woman had been buried, she came to life at night. Greatly were all frightened. There, where she had been buried in her grave, it was burst open, and the stones which had been laid over it went to scatter at a distance. And this woman, after she had returned to life, then went to converse and speak with Moctezuma about what she had seen. She informed and said to him: "For this reason have I returned to life: I have come to tell thee that thou art come to the end. With thee the reign of Mexico ceaseth; for in thy time the city of Mexico will end. They who come, lo, these have come to subjugate the land; these will occupy Mexico." And this woman who had died lived another twenty-one years, and once more bore a son.

And many [were] the cities which Moctezuma conquered. Their names [were] Icpatepec, Cuezcomaixtlauacan, Çocollan, Tecomaixtlauacan, Çacatepec, Tlachquiauhco, Iolloxonecuillan, Atepec, Mictlan, Tlauapan,[4] Nopalan, Itzuc tlalocan, Cuextlan, Quetzalteper, and Chichioaltzacalan.

In the days of this same [ruler] it befell that, eight years before the Spaniards came to arrive, it was seen, and taken as an omen, that by night a very great brilliance arose, like a flame. All night it stood shining. It appeared at the place where the sun came

175 731 648 The tenth ruler of Tenochtitlan.

Cuitlauac was the tenth, and he ruled eighty days after the Spaniards reached Mexico. In the time of this one, it happened that a great plague came, and that many died of it everywhere in the cities. It was said that it was the smallpox, the great raising of blisters. Never once had this been seen; never had it been suffered in Mexico. Indeed, it smote the faces of everyone, so that pits and roughnesses were formed. No longer were the dead buried; they could only cast them all into the water[5]—for in those times there was much water everywhere in Mexico. And there was a great, foul odor; the smell issued forth from the dead.

Second Chapter, which telleth of the rulers who governed in Tlatilulco when the reign had not yet perished and when, later, once again the Spaniards gave back and restored [it] to them, until the year 1560.

Injc vme capitulo itechpa tlatoa in tlatoque in otlatocatque tlatilulco, in aiamo poliuj tlatocaiotl, ioan in çatepan oc ceppa oquijnmacaque oquijncuepilique españoles in ixqujchica ipan xiujtl de 1560.

The first ruler of Tlatilulco, Quaquapitzauac, who first began [the reign], governed Tlatilulco for sixty-two years. He conquered the people of Tenayuca, and Coacalco, and Xaltocan. When this one then ruled, two rulers of Tenochtitlan came together [one after the other], who were named Acamapichtli and Uitzilinitl.

Injc ce tlatilulco tlatoanj Quaquappitzaoac achto compeoalti tlatocat in tlatilulco iepoalxiujtl omome, qujmpeuh in tenaiocan tlaca, ioan coacalco ioan xaltocan, in ichoatl, y, ic tlatocat qujnnamjcticatca vmentin tlatoque in tenochtitlan in omoteneuhque Acamapichtli ioan vitzilinitl.

The second ruler of Tlatilulco.

Tlacateotl [was] the second, and ruled Tlatilulco for thirty-eight years. It came to pass in his time that all the people of Acolhuacan and those of Coyoacan were conquered.

Injc vme tlatilulco tlatoanj.

Tlacateotl ic vme, tlatocat in tlatilulco, cempoalxiujtl ipan caxtolxiujtl omej, ipan muchiuh injc peoaloc ixqujch aculhoacatl ioan coioacatl.

The third ruler of Tlatilulco.

Quauhtlatoa [was] the third, and ruled Tlatilulco for thirty-eight years. Two rulers, also, came together [one after the other], in Tenochtitlan. These [were] Itzcoatl and Moctezuma the Elder. It came to pass in his reign that the people of Azcapotzalco, and Coaixtlauacan, and Cuetlaxtlan, and Quauhtlinchan, and Xochimilco and all the people of Quauhnauac were destroyed and conquered.

Injc ei tlatilulco tlatoanj.

Quauhtlatoa, ic ei tlatocat in tlatilulco cempoalxiujtl ipan caxtolli omej xiujtl, qujnnamjcticatca no vmentin tlatoque catca in tenochtitlan, ichoatl itzcoatl, ioã veue motecuçuma. 1. For reasons we cannot, the *Real Academia de la Historia* MS has *nueve* or *noventa*.
2. In *ibid.*, *nochipilteca*, years *ninetieu* there, years follows *nochtlan* there.

Third Chapter, where are told the rulers of Texcoco, and as many years as they governed.

The first ruler, who began the reign in Texcoco, was Tlaltecatzin. He ruled only eighty days, and nothing [of note] happened in his time. This one [was one of] the Chichimeca rulers.

And the second who became ruler, who followed Tlaltecatzin, was Techotlalatzin the Chichimeca. And he ruled seventy years; nor did anything [of note] occur in his time.

And the third who became ruler of Acolhuacan[1] was Ixtlilxochitl the Elder. He ruled for sixty-five years. [And] nothing [of note] befell in his time.

And the fourth who became ruler of Texcoco was Neçaualcoyotzin. He ruled seventy-one years. And at this time, in the time of Neçaualcoyotzin, the war was begun. The two, [Neçaualcoyotzin and] the ruler of Tenochtitlan, Itzcoatzin, conquered the Tepaneca, and they conquered people everywhere. Thereafter this Neçaualcoyotzin founded and laid down the seat of authority[2] of Acolhuacan or Texcoco.

And the fifth who became ruler of Texcoco was Neçaualpilli, and he ruled for fifty-three years. In his time war was made in all parts through which people were conquered. And when these two, Neçaualcoyotzin and Neçaualpilli, ruled, they were besieged by Tlaxcala and Uexotzinco.

And in the time of Neçaualpilli began what kept appearing, in the heavens, like a light, like a flame of

Sixth Chapter, in which it is told how signs and omens appeared and were seen, when the Spaniards had not yet come to this land, and when they were yet unknown to the dwellers here.

When the Spaniards were not to arrive here for ten years, an omen first appeared in the heavens like a flame, a tongue of fire, as if it were showering the light of the dawn.[1] It appeared as if it were piercing the heavens; it was wide at the base and pointed at the top. Well into the midst of the heavens, well into their center it stood reaching; well into the heart of the heavens it was arriving. [That which] thus was seen arose there to the east,[2] and when midnight had passed, it appeared that dawn was breaking. When day broke, soon the sun destroyed it when he arose. For a whole year it came forth (it was in [the year sign] Twelve House that it began), and when it appeared, there was much crying out as they struck their mouths with their hands. All were frightened; all waited in dread.

The second omen came to pass here in Mexico. Of its own accord, fire broke out and burned fiercely in the house of the devil Uitzilopochtli. No one set fire to it; of its own accord it took fire. It is said that the name of the place[3] was Tlacatecco. When [the fire] appeared, already the squared, wooden pillars were blazing. From within, the flame, the tongues and flames of fire, came forth. Very quickly it consumed all the house beams. Then there was shouting; [the priests] said: "Mexicans! Run here to extinguish [the fire! Bring] your earthen water jars!" And when they poured water upon it, when they tried to put it out, still more did it flare up. It could not be extinguished, and it burned completely.

[As] the third omen, a temple was struck by a thunder bolt.[4] It was only a straw hut, a place named

175 787 Tzonmulco, the Temple of Xiuhtecutli. It was not raining hard, but only sprinkling. This was taken as an omen of evil, [for] it was said that it was only a summer flash, and that thunder did not sound.

[As] the fourth sign of evil, [while] there was still sun, a comet fell. It became three parts and began from where the sun set and went toward where he arose. It went as if showering sparks; for a great distance its wake went extending; far out did its tail reach. And when it was seen, there was much shouting; like [the rattle of] shells[5] it spread about.

[As] the fifth omen, the water [of the lake] foamed up, and the wind did not stir it up. It was as if it welled up, as if it boiled up with a cracking noise. Very far did it go as it rose upward, and it reached the lower parts of the houses; and, wet by the water, the houses crumbled. This was the great like which extendeth by us here in Mexico.[6a]

[As] the sixth omen, often was heard a woman, who went weeping and crying out at night. She cried out loudly; she went about saying: "O my beloved sons, now we are at the point of going!" Sometimes she said: "My beloved sons, whither shall I take you?"

[23] [As] the seventh omen, at one time the fisher folk hunted or snared with nets. They took a bird of ashen hue, like a crane. Then they came to show it to Moctezuma, [who was in] the Tlillan calmecac.[8] The sun was past his zenith, and there was yet daylight. There was what was like a mirror upon its head—round, disc-like, and as if pierced. From it appeared the heavens—the fire drill, the stars. And Moctezuma took it as a most evil omen when he saw the stars and the fire drill. And when he gazed a second time at the bird's head, beyond, he beheld what appeared to be like a number of people, coming massed, coming as conquerors, coming in war panoply. Deer bore them upon their backs. And then he summoned the astrologers[9] and the wise men, and said to them: "Do you not know what I have

Seventh Chapter, in which are told many things which came to pass when the Spaniards had not yet come to this land, until the year '50.*

In the year 1519, when the Captain, Don Hernando Cortés, came to sally forth, very many boats came, in which the Spanish host traveled. And when Moctezuma knew of it, then he sent his emissaries, and they carried as greetings very many and costly articles.

And they thought that Quetzalcoatl had come. And when he went to arrive, then they gave and took all [which they carried] as greetings to this Captain, Don Hernando Cortés.

And when these Spaniards came to enter [the land], then the Tlaxcalans' Otomí[1] [warriors] went to meet them in battle. Not few, but very many thus fought and waged war with the Spaniards. And all of the Tlaxcalans' Otomí [warriors] died; the Spaniards slew them. By this were the Tlaxcalans much frightened, and these Tlaxcalans then sent messengers, [who] went to offer them food and all which they might need. And they welcomed them and escorted them to the homes of Tlaxcala.

And for a few days the Spaniards tarried and rested there. And the Spaniards then went there to Cholula. There they slew many Cholulans.

And after this, when Moctezuma had heard of it, he was much frightened; and all the people of Tenochtitlan were exceeding fearful. So once again he sent messengers. These whom this Moctezuma sent, lords and noblemen, went to meet the Captain, Don Hernando Cortés; they took with them a great deal of gold. And they went to meet him there between Popocatepetl and Iztac ciuatl, [at a place] named Itualco.[2] There they conferred [with Cortés; one of]

Tenth Chapter, in which is told how the rulers took their pleasure.

Injc matlactli capítulo, ipan mjtoa injc meellel- 643
quixtiaia tlatoque.

When the ruler went forth, in his hand rested his reed stalk which he went moving in rhythm with his words. His chamberlains and his elders went before him; on both sides, on either hand, they proceeded as they went clearing the way for him. None might cross in front of him; none might come forth before him; none might look up at him; none might come face to face with him.

In jcoac quiça tlatoanj, imac onotiuh, iacapitzac, injc mapilotiuh, injc matlatotiuh qujiacana in jtechiuhcaoan, in jtaoan, necoc vmac in mantiuj, in quitlapeujlitiuj: iiac vel qujiacaujltequj, aiac uel ixpan quiça, aiac vel acopa quitta, aiac uel quixnepanoa, [481] 648 644

He sang; songs were learned; chants were intoned. They told him proverbs and pleasantries to pass the time.

cujca, mocujcamachtia, cujcacheoua, quitlatlaquechilia, quiçaçanjlhuia, [521]

They played ball. There were his ball-catchers and his ball-players. They wagered [in this game] all [manner of] costly goods—gold, golden necklaces, green stone, fine turquoise, slaves, precious capes, valuable breech cloths, cultivated fields, houses, leather leg bands, gold bracelets, arm bands of quetzal feathers, duck feather capes, bales of cacao—[these] were wagered there in the game called *tlachtli*.

vllama, vncatca imolpixcaoa, ioan inmolancaoan, quitlanjtoa in jxquich tlaçotli in teucujtlatl, in teocujtlaconcatl, in chalchiujtl, in teuxiujtl, in tlaçotli, in tlaçotilmatli, in tlaçomaxtlatl, in mjlli, in callj, cotzchoatl, teucujtlamatemecatl, quetzalmachoncotl, xomoiujtilmatli, cacaoapetlatl in vncan netlanjoa, inca tlachtli: [525 526] [301 576 314]

On the two sides, on either hand, it was limited by walls, very well made, in that the walls and floor were smoothed. And there, in the very center of the ball court, was a line, drawn upon the ground. And on the walls were two stone, ball court rings. He who played caused [the ball] to enter there; he caused it to go in. Then he won all the costly goods, and he won everything from all who watched there in the ball court. His equipment was the rubber ball, the leather gloves, girdles, and leather hip guards.

necocampa imac tlatepantectli, cenca tlaiecchiuhtli injc xipetztic in tlachmatl, ioan in tlalmantli: auh in vncan vel inepantla tlachtli, onoca tlecotl tlaxotlalli in tlalli, auh in jtech tlachmatl, vntetl in tlachtemalacatl manca, in aquja ollimanj vncan tlacalaquja, vncan quicalaquja olli: njman ic quitlanj in jxquich tlaçotli tlatquitl, auh mochintin quintlanj, in jxquichtin tetlatlatzaque, in vncan tlachco: itlaujcallo in olli, maiecatl, nelpiloaj, queçoatl. 345 526

Patolli was played with large beans—four large beans with holes bored into the surfaces. The game was won when from their hands they scattered the four beans on a mat painted in widely spaced black [lines], with which the *patolli* mat was designed. There went to be added the counters—twelve [of them], six the property of each, the counters of each of the commanders. He who won in playing *patolli*,

Patoa ica aiecotli, vevej etl nauhtetl in tlaixcoionjlli injc motlanj immatica in quichaiaoa in nauhtetl etl, quicujloa ce petlatl, tilitica, papatlactic in tilli, injc mjcujloa patolpetlatl, in vncan mopouhtiuh tlapoaltetl matlactetl omome chichiquacentetl imaxca intlapouhtiuh icecemme in jxnamjquj in motlanj in patoa, quitlanjlia in inequich tlaçotli, cozticc teucujtlaconcatl, chalchiujtl, teuxiujtl, matzopetztli ipan ca chalchiujtl 524 524 525

1. Pipiolli: the corresponding Spanish has dices (dicesll). See also below, description of patolli.

524 525 won* all the costly goods: golden necklaces, green stone, fine turquoise, bracelets on which were round, green stones or fine turquoise, quetzal feathers, slaves, houses, fields, precious capes, mats, large capes, green stone lip plugs, golden ear plugs, duck feather capes. And he who played *patolli*, who cast the beans, if then he made one [of them] stand, if the bean stood up there on its thicker end, it was taken as a [787] great omen; it was regarded as a great marvel. Then he won all the costly goods. [The other] lost even though he had not yet attained the specified number of throws. Thus were all agreed; thus all came to the end [of the game].

ololiuhquj anoço teuxiujtl, quetzalli, tlacotli, calli, mjlli, tlaçotilmatli, pepechtli, venej tilmatli: chalchiuhteuxtli, teucujtlanacochtli, xonoiujtilmatli. 643
714 **Twelfth Chapter**, in which it is told how the rulers were arrayed whom they sent to the wars.

The costly red spoonbill headdress set off with gold, having very many quetzal feathers flaring [237] [from it], and with it, borne upon his back, the skin drum upon a carrying frame, and decorated with gold.

And they dressed him in a red shirt, made of red spoonbill feathers [decorated with] flint knives[1] [fashioned of] gold; and his *xapote* leaf skirt was made all of quetzal feathers.

The shield was ringed with thin gold, and its pendants were made of precious feathers.[2]

[He had] a green stone necklace of round, large, green stone and fine turquoise combined.

The ruler placed upon his head a blue cotinga [237] feather headdress which was set off with gold, and had quetzal feathers flaring [from it]. Over the upper part of his body he put a shirt of blue cotinga feathers.

And as a burden for his back [he had] a blue skin drum fashioned on a frame, and [ornamented] with gold.[3]

All quetzal feathers was its *xapote* skirt; and its pendants were all costly feathers. And the [ornaments of] flint knives, for its covering of blue cotinga feathers, were of thin gold [plate].

The ocelot Xipe was made of ocelot skin; its flint knife [decoration] was made of gold.

Its *xapote* leaf skirt was all of quetzal feathers.

The ocelot drum, the burden on his back, was of [531] gold [decorated] with [wavy lines called] hawk scratches.

The shield was covered with blue cotinga feathers and had a disc of gold in the center.

531

The quetzal feather butterfly was the burden for the back; with it belonged the yellow parrot feather shirt, [decorated] with hawk scratches in gold.

The shield with a golden disc had a golden butterfly in the middle. [There was] a quetzal feather claw,[4] with gold. The shirt [which belonged to this] was of yellow parrot feathers.

The golden hood had horns of quetzal feathers; its shirt was of yellow parrot feathers.

The silver hood had quetzal feather tufts held in cups. With it belonged a shirt of yellow parrot feathers with hawk scratch [decorations] in gold.

[There were] the quetzal feather banner of the spear house; the silver banner with a spray of quetzal feathers held in a cup at the top; and the golden banner with a spray of quetzal feathers held in a cup at the top.

The finely wrought obsidian butterfly was of quetzal feathers and gold; its teeth and claws were all of precious feathers; and it had quetzal feather horns.

The finely wrought butterfly of [the goddess] Xochiquetzal [was made of] precious feathers; and its horns were of gold and quetzal feathers.

[There was] a quetzal feather crest-like device. With it belonged a blue cotinga-feather shirt; the shield was covered with blue cotinga feathers and had a disc of gold in the center.

The Xolotl head of yellow parrot feathers, with balls of quetzal feathers, was ornamented with gold. With it belonged a shirt of yellow parrot feathers with hawk scratch decorations in gold.

The blue Xolotl head was ornamented with quetzal feathers and gold. With it belonged a blue shirt.

The white Xolotl head was ornamented with quetzal feathers and gold. With it belonged a white shirt.

The bright red Xolotl head was ornamented with quetzal feathers and gold; its shirt was likewise bright red.

The headdress of trupial feathers was ornamented with quetzal feathers and gold. With it belonged a shirt of yellow parrot feathers.

The yellow demon of the air was made all of gold, and had quetzal feathers and balls of quetzal feathers.

The blue demon of the air had quetzal feathers, was made all of gold, and had balls of quetzal feathers.

4. Cf. discussion in Seler, op. cit., II, pp. [illegible], as well as corresponding Spanish text—"a manera de chapa, y en medio de ella traía una flecadura, de plumas ricas, y cosa una."

The white demon of the air was of gold, and had quetzal feather balls.

The yellow, Huaxtec, pointed, conical cap had a golden [disc] in front and was girt with quetzal feathers. And the shirt was of yellow parrot feathers [decorated with] hawk scratches. Gold was his crescent-shaped nose plate; gold were his ear pendants, with quetzal feather spindles.

The white, Huaxtec, pointed, conical, paper cap had quetzal feathers bound at the base and a [disc] of gold at the front; its spindles were of quetzal feathers and gold. Gold was his crescent-shaped nose plate, and gold were his ear pendants.

[For] the bi-colored Huaxtec, the shirt was half blue and half yellow. His conical, pointed cap was also bi-colored—half blue and half yellow, and it had quetzal feathers girt at the base and a golden [disc] at the front. Gold was his crescent-shaped nose plate; his ear pendants were gold; and his spindles were of quetzal feathers.

The golden conical cap had quetzal feather tufts held in cups. The silver conical cap had quetzal feather tufts held in cups.

[There were] shell trumpets and clay pipes which were blown in battle so that the warriors might set forth together to fight. The standard, [which was] of gold, and the quetzal feather banner dispatched the men to battle. When it was seen that already all the standards were raised, then the warriors set forth together to do battle.

The quetzal feather sun [consisted of] a golden sun, and in the middle of it was a circle of quetzal feathers. The young maize flower crest had, as its leaves, quetzal feathers, and [was ornamented] with flint knives [fashioned of] gold. On his temples went plate-like pieces of gold. The wooden sword [was provided] with obsidian blades [set in] a groove at its edge. The headdress of quetzal and heron feathers [ornamented] with gold, [had] single quetzal feathers, and many quetzal feathers rustled [from it. There was] the ocelot wine jar, whose foam had single quetzal feathers [set in it], and many quetzal feathers rustled [from it].

1. Sahagún's Spanish translations varies somewhat from dictionary and other definitions of the foods named in the Aztec text. In the notes, our translations favour Sahagún's; footnotes take account of the more noticeable variations.

2. *Tlamatlapachoalli*, *chocolapachoalli*: hot, white tortillas, doubled, arranged in a large basket, according to the corresponding Spanish text. In Molina, op. cit., the word means "*cosa doblada, o plegada*."—If the root of *quachili* is *pachoa*, the term could indicate that the tortillas were crumbled, or could refer to the way they were baked, for *cha* means 3, *tlapa*.

3. In Sahagún, op. cit., III, p. 307, Dr. Ignacio Alcazar translates *quauecujcujlli tamalli quauecujcujlli tamalli* as *Tamales de cuerpo cuadrado y nudo cuadrado* [sic]. Alfonso Villanueva, in *Historia de Ixtapan* (Ix. Tlatenco-Cuauhtemoc, Pedro P. Jacob, 1953), I, p. 249, has this explanation: "*Los tamales cuadrados quauecujcujlli-tamalli, huexo-tamalli* [*huexxo tamalli?*], *chocoal-quauhtli, grande gallinero de frutas de flor o de frutas de monte que eran dicen pedazos d'Quetzalcoatl, cómo que eran cuajados d'Quetzal o de gallos*."

4. Cf. Molina, op. cit.

Fourteenth Chapter: here are described the palace and the houses of the lords: how were kept the houses of the lords [and] the great palace where the ruler dwelt; [how] all the lords[1] were disposed there, and there were determined the tributes or warfare; and in that place there was eating and drinking when the ruler assembled the people there.

FIRST PARAGRAPH, in which is described the court of justice, the high court, [in which], when something was harmed, when some did evil, there they passed judgment on them.

Tlacxitlan:[2] there were the rulers, the princes, and the high judges. All the complaints of the lower classes and common folk they there heard and judged. And all death [sentences] they there meted out; either they would strangle one with a cord, or stone him to death, or slay him under wooden staves,[3] beaten; or some nobleman or judge was to be shaven [as a disgrace], or driven [out of the land], or confined, or made a commoner; or one would be seized and jailed in a wooden cage.[4] And there they delivered slaves from [undeserved] bondage.

[When] Moctezuma was lord, there was famine for two years, and many noblemen sold their young sons and maidens. When Moctezuma heard of this, he commanded that all [these] noble youths be brought together, and that their masters be told that their goods [which they had paid for them] were to be restored and returned to them. With large capes and mantles, and dried maize grains he paid the price for the noblemen. And a double forfeit he then paid in order to redeem and deliver the noblemen from bondage.

In that place, the Tlacxitlan, they did not delay the hearings. At once, forthwith, a judgment was pro-

vncan caquitilois tlatoque atle quicnjuhchiosia atle tlaxtlaujltica quixpachosia, anoço quiuecaoia.

SECOND PARAGRAPH, which telleth of the court, the place of discussion, where spoke the judges.

[693] Teccalli,[5] or Teccalco: there were the judges and noblemen.[6] Every day the common folk and vassals laid complaints before them. Calmly and prudently [212] they heard the plaints of the vassals; in the picture writing which recorded the case, they studied the complaints. And when they tested their truth, they sought out and inquired of informers and witnesses who could size up the plaintiffs, [who knew] what had been stolen and what was charged.

687 And the ruler, if he knew anything ill of these judges—perhaps that they needlessly delayed the case of common folk, that they deliberated two years or even four—[that] they could not pronounce judgment because of either a bribe or kinship,—he then seized them and jailed them in wooden cages, exacted the penalty, and slew them, so that the judges might walk in dread.

[When] Moctezuma was lord, he learned many ill things of the judges Mixcoatlailotlac, Teicnotlamachti, Tlacochcalcatl, Itzlaca mixcoatlailotlac, Umaca, Toquai. Uictlolinqui, [all] of Tlatilulco—that they had unjustly discharged their office of judge. Then he seized them, jailed them in wooden cages, exacted the penalty, and slew them.

5. Sahagún, in the corresponding Spanish text, refers to all of these places as "another hall"—"otra sala."

6. Manuel Orozco y Berra, in *Memorias antiguas de la conquista de México* (México: Tipografía de Gonzalo A. Esteva, 1880), I, p. 287, explains that "*En cada barrio de México había un tecalli, donde concurrían por las mañanas, determinados de cuatro en cuatro, diendo cuatro diferentes á los jueces superiores.*" Clark, *loc. cit.*, I, p. 97) writes: "The four seated figures behind the judges, called *tecali*, are young men of rank who attend the courts for instruction, so that in time they might rise to the position of judge." (See also ff. 67r and 68r of the Mendoza Codex.)

7. *Tecuani, pilli, ocpilli*: cf. Sahagún, *op. cit.*, III, p. 36; Jones, *op. cit.*, pp. 34, 68.

8. *Tlaçopilli*: cf. Jones, *op. cit.*, p. 34.

adultery. They accused him before Moctezuma, who then condemned him to be stoned before the people.

FOURTH PARAGRAPH, in which is discussed the council chamber of the brave warriors devoted to war.

Tequiuacacalli or Quauhcalli: there were the brave warriors, the generals, and the commanding generals,[9] whose personal charge was command in war.

Achcauhcalli: there were the constables, the brave warriors who were the ruler's executioners. These who brought to an end [the life of] any upon whom sentence had fallen [were] the Quauhtecuhtli, Atempanecatl, and Tezcacoacatl. And if they erred in something, they exacted the penalty of them and they died.

Cuicacalli: there were the masters of the youths and the rulers of the youths, there established in order to oversee what was by way of work. And every day, when the sun had already set, they turned their attention to dances. They went quite naked. So they went to the house of songs; so they danced with song, proceeding with, about their necks, only [a cape] made like a net. They set in place and proceeded with their forked heron feather ornaments and the red cord with which they bound their hair; and [they had] their turquoise ear plugs and sea shell lip pendants. All the youths, when they danced and sang, ceased when it was well into the night, when for the first time the fire priests and [other] priests blew the shell trumpets. None of [the youths] entered their homes; none slept at home. Rather, they went straight to the young men's houses, which were everywhere. There they slept, stretched out quite naked. Only little did they sleep. On the morrow, when it was still dark, they set forth, to lodge in the house of the ruler.

And when the ruler knew something ill of them—either drunkenness or concubinage;[10] or that they wrought something to their advantage behind the back of the ruler; [or] that without his command they levied tribute on the town, perchance of chocolate, or of food, which became a tribute, and it was done without leave, and [that] they exacted as tribute whatsoever they wished, then the ruler commanded that they be jailed in wooden cages. He condemned them to pay the penalty; perchance they strangled

561 681 them with a cord, or they stoned them, or before the people they beat them with wooden [staves], so that they were slain. Thus the ruler implanted fear.[11]

251 FIFTH PARAGRAPH, where is told how they stored all the food.

Petlacalco: there was stored all the food. Dried maize grains thus were kept in wooden grain bins; more than two thousand [measures of] grains of dried maize—a store of twenty years for the city. And in wooden storage bins were dried beans, chía, amaranth seeds, wrinkled chía, salt jars, coarse salt, baskets of chilis, baskets of squash seeds, and large squash seeds. And there was kept the jail, the [297] wooden cage,[12] where they imprisoned and confined evildoers.

624 651 681 344 SIXTH PARAGRAPH, in which is described the house of the majordomos and stewards.

Calpixcalli[13] or Texancalli: there assembled all the majordomos and tribute gatherers. There they were lodged [to await the command of the ruler, (lest) he require something, or] to bring down and put in order that which was their trust as tributes, [and there they arranged in order the various foods] which every day they gave the ruler. And if the ruler knew something ill of a majordomo, perchance of something he stole from the tributes; or that all his charge, the tributes, perhaps did not equal the correct count when all his store was tallied and examined; then he jailed the majordomo in a wooden cage; he exacted the penalty, that he die. Then he cast out his women [and his children from his home]. Then quickly tie house of the majordomo was closed up, and all his goods remained in the house. All belonged to the ruler.

IC CHIQUACEN PARRAPHO, vncã mjtoa: in jnchan mayordomos in calpixque.

Calpixcalli, texancalli, vncã cenquiçaia: in jxquich calpixquj, ioan tequjtquj, vncan tecpanoaiõinjc [quitlatolchixticatca tlatoani, aço tlein quinequiz, aço] tlein qujtemoz qujcencauhticatca, in tlein inpiel tlacalaquijlli, [yoan uncan quicenquixtiaya y nepapan tlaqualli,] in momoztlac qujmacaia tlatoanj. 565 574 431 344 Coacalli: there were established all the lords from everywhere—friends of the ruler, and all the lords unfriendly to him. He gave and bestowed upon them all manner of costly goods: valuable capes and breech clouts, golden lip plugs, golden ear plugs, green stone lip plugs, green stone necklaces, and green stone bracelets.

Coacalli vncan tecpanoaia, in jxquichtin, nouijan tlatoque: in jicnjhoan tlatoanj, ioan in jxquichtin, iiauhoan tlatoque: qujnmacaia, qujntlauhtiaia, in jxquich tlaçotli, in tlaçotilmatli, in tlaçomaxtlatl, in teucujtlatentetl, in teucujtlanacochtli, in chalchiuhteintl, in chalchiuhcoacatl, in chalchiuhmacuextli.

11. At the end of this paragraph, the *Real Academia de la Historia MS* contains an account of the Coliseum, which is lacking in the *Florentine Codex*. (See Appendix A.)

12. *Tetlpilcalli, quauhcalli*: Orozco y Berra, op. cit., I, pp. 268-269, writes: "*Las prisiones eran de dos especies. La llamada tetlpilcayan, lugar de presos, en que estaban detenidos los delincuentes de poca leve; el quauhcalli, casa de madera, especie de jaula fuerte de vigas, en que se guardaba los condenados á la muerte y prisioneros de guerra destinados al sacrificio.*"

13. In the *Real Academia de la Historia MS*, these passages appear which are not in the *Florentine Codex*. Because they change the sense to a degree, they are here inserted in brackets.

SEVENTH PARAGRAPH, in which is told how the singers bedizened themselves when the ruler would dance; and of that in which they would dance.

Mixcoacalli: there were established all the kinds of singer-dancers of Tenochtitlan and Tlatilulco. There they awaited the word of the ruler, that he would dance, or try some song, or learn some new song. All this the singers prepared, all that was necessary—two-toned drums, rubber drum hammers, ground drums, rattles shaped like dried poppy heads, copper bells, flutes; players of two-toned drums and ground drums, intoners of chants, leaders of the dance; and all the properties used in the dance.

If the song were to be intoned after the manner of Uexotzinco, they were adorned like men of Uexotzinco, and spoke even as they did; they were imitated with the song and in their adornment and their equipment. Likewise if a song were to be intoned after the manner of Anauac, the speech of the men of Anauac was imitated, and their adornment as well as their equipment. Likewise, if a song were to be intoned after the manner of the Huaxteca, their speech was imitated, and their headdresses were taken, with which to imitate them in coloring their hair yellow; and the marks [had] arrow marks [painted] on the face, noses pierced like jug handles, teeth filed [to a point], and conical heads. And they [were clad] only in their capes. Likewise [they did] other songs.

[p. 50 is blank]

Seventeenth Chapter, in which are told the exercises of the rulers and how they might perform well their office and their government.

FIRST PARAGRAPH, where is told, as well, the ordering of those sent when war was waged.

The ruler was known as the lord of men. His charge was war. Hence, he determined, disposed, and arranged how war would be made.

First he commanded masters of the youths and seasoned warriors to scan the [enemy] city and to study all the roads—where [they were] difficult, where entry could be made through them. This done, the ruler first determined, by means of a painted [plan], how was placed the city which they were to destroy. Then the chief noted all the roads—where [they were] difficult, and in what places entry could be made.

Then he summoned the general and the commanding general, and the brave warriors, and he commanded them how they were to take the road, what places the warriors were to enter, for how many days they would march, and how they would arrange the battle. And he commanded that these would announce war and send forth all the men dexterous in war to be arrayed, and to be supplied with provisions for war and insignia.

The ruler then consulted with all the majordomos—the men of the Petlacalco[1] and of the Azcalco, the majordomos of Quauhnauac and Uaxtepec, and [those] of Cuetlaxtlan, Tochpan, Tziuhcoac, Tepequacuilco, Uapan, Costlixtlauacan, Tlappan, Tlachco, Matlatzinco, Ocuillan, Xilotepec, Atotonilco, Axocopan, Itzcuincuitlapilco, Atocpan, and Ayotzinteper. He ordered them to take out all their [goods held in] storage, the tributes, costly articles—insignia of gold, and with quetzal feathers, and all the shields of great price.

And when the majordomos had delivered all the costly devices, the ruler then adorned and presented with insignia all the princes who were already able in war, and all the brave warriors, the men [at arms],

643 701 the seasoned warriors, the fearless warriors, the Otomí, and the noblemen who dwelt in the young men's houses.

721 And when it had come to pass that the ruler adorned them, when he had done this to the brave warriors, then the ruler ordered all the majordomos[2] to bear their goods, all the costly devices, and all the valuable capes there to battle, that the ruler might offer and endow with favors all the [other] rulers, and the noblemen, and the brave warriors, the men [at arms] who were about to go to war, who were to be extended as if made into a wall of men dexterous with arms. And the ruler forthwith called upon the rulers of Texcoco and Tlacopan and the rulers in all the swamp lands, and notified them to proclaim war in order to destroy a [certain] city. He presented them all with costly capes, and he gave them all insignia of great price. Then he also ordered the common folk[3] to rise to go forth to war. Before them would go marching the brave warriors, the men [at arms], the lord general, and the commanding general.

726 The lords of the sun, it was said, took charge and directed in war. All the priests, the keepers of the gods, took the lead; they bore their gods upon their backs, and, by the space of one day, marched ahead of all the brave warriors and the seasoned warriors. These also marched one day ahead of all the warriors of Tenochtitlan. Again these marched one day ahead of all the warriors of Tlatilulco. These also marched one day ahead of all the men of Azcapuzalco, who likewise marched one day ahead of all the Tepaneca, who similarly marched one day ahead of the men of Xilotepec; and these also marched one day ahead of all the so-called Quaquata. In like manner the [men of] other cities were disposed. They followed the road slowly and carefully.

And when the warlike lands[3] were reached, the brave warrior generals and commanding generals then showed the others the way and arranged them in order. No one might break ranks or crowd in among the others; they would then and there slay or beat whoever would bring confusion or crowd in among the others. All the warriors were extended there, until the moment that Yacatecutli, [god of] the night, would descend—that darkness would fall.

2. The corresponding Spanish passage reads: "Mandaban luego, a los calpixques, que llamaban oruas, a todos los principales, para el, y para sus soldados; y entonces los calpixques a sus gentes, y los llamaban oruas."

3. Tomemipan, dichosamente: cf. Sahagún, op. cit., II, p. 188 (Segunda parte de la guerra sobredicha), and p. 189 (Los lugares de los batallas).

And when they already were to rise against the city to destroy it, first was awaited remedy the moment when fire flared up—when the priests brought forth [new] fire—and for the blowing of shell trumpets, when the priests blew them.

And when the fire flared up, then as one arose all the warriors. War cries were raised; there was fighting. They shot fiery arrows into the temples.

And when they first took a captive, one fated to die, forthwith they slew him there before the gods; they slashed his breast open with a flint knife.

And when the city had been overcome, thereupon were counted as many captives as there were, and as many Mexicans and Tlatilulcans as had died. Then they apprised the ruler that they had been orphaned for the sake of Uitzilopochtli; that men had been taken captive and been slain. And the ruler then commanded the high judges to go to tell and inform all in the homes of those who had gone to die in war, that there might be weeping in the homes of those who had gone to war to die. And they informed these in the homes of as many as had gone to take captives in war that they had received honors there because of their valor. And they were rewarded according to their merits; the ruler accorded favors to all—costly capes, breech cloths, chocolate, food, and devices, and lip rods and ear plugs. Even more did the ruler accord favors to the princes if they had taken captives. He gave them the offices of stewards, and all wealth without price—honor, fame, renown.

And if some had done wrong in battle, they then and there slew them on the battlefield; they beat them, they stoned them.

And if several claimed one captive, and one man said, "He is my captive," and another man also said, "He is my captive": if no man verified it, and also if no one saw how they had taken the captive, the lord of the sun decided between them. If neither had an advantage of the two who claimed the captive, then those who had taken four captives, the masters of the captives, decided that to neither one would the captive belong. He was dedicated to the Uitzcalco[4] [or] they left him to the tribal temple, the house of the devil.

And when the city which they had destroyed was attained, at once was set the tribute, the impost. [To the ruler who had conquered them] they gave that

728 651 which was there made. And likewise, forthwith a steward was placed in office, who would watch over and levy the tribute.

SECOND PARAGRAPH, in which it is described how they chose judges.

643 693 565 The ruler watched especially over the trials; he heard all the accusations and the complaints, the afflictions, and the misery of the common folk, the orphans, the poor, and the vassals.

And in order that the ruler might verify one's accusations and guilt, there were placed in office, and [the ruler] chose, as his judges,[5] the princes, those who were endowed with the necessities of life, those provided with drink and food—the rich; and the brave warriors and men [at arms], who had been reared in war and had gloried in all kinds of suffering and misery. In all things had their upbringing, their rearing, been sound. In their infancy they had been taught [according to] the upbringing in the priests' house, or the rearing by the masters of the youths, growing up with others, living in the [same] houses as others, engaging in war, taking captives.

And likewise the ruler thus chose and placed in office judges of the Mexicans who were not noblemen—those of sound and righteous upbringing, who had been reared in war: brave warriors and men [at arms] who in many ways had won glory by the favor of the ruler. By his grace they drank and ate. He gave them contentment and he gave them gifts; he bestowed upon them whatsoever they needed.

[577] Such as these the ruler gave office and chose as his judges—the wise, the able, the sage; who listened and spoke well; who were of good memory; who spoke not vainly nor lightly; who did not make friends without forethought nor were drunkards; who guarded their lineage with honor; who slept not overmuch, [but rather] arose early; who did nothing for friendship's or kinship's sake, nor for enmity; who would not hear nor judge a case for a fee. The ruler might condemn them to death; [681] hence they performed their offices as judges rightfully. For otherwise, these judges could find excuse for the wrongs which they might do.

And when the ruler placed his judges in office, he gave them two court rooms, the Tecalli, where they

were to remain, to make judgments, and to hear all manner of testimony.

The name of one Teccalli was Tlacxitlan. There they tried princes and great lords. At once, swiftly, they passed judgment on their complaints or wrong doing.

And the second place where justice was done was named Teccalli. There were the Mexican judges. Sagely they heard the complaints of the common folk. They defined and verified the complaint, they recorded it in paintings so that they might take it there to Tlacxitlan, where they informed the judges who were princes, so that their judgment might be pronounced.

And if something was difficult, they took it to the ruler so that he might judge it [with] those judges* whose names were Cuauhcoatl, Tlacochcalcatl, Uitznaoatlailotlac, Ticociauacatl, Pochtecatlailotlac, Ezauacatl,[1] Mexicatl tzacacoacatl, Acatliacapanecatl, Milnauatl, Atlauhcatl, Ticociauacatl, Cioatecpanecatl, and Tequixquinauacatl. These same judges meditated and pondered upon, and examined, the testimony. They sought out the witnesses, those who bore testimony. Perchance [the charge] was true; or else that which the ruler had heard was false, so that, perhaps, by error* someone had been held in jail.

And if the ruler condemned someone to die, then his executioners slew him—the Achcacauhti,* the Quauhxocheti, and the Atempanecatl. Thus did these slay him: with a cord they strangled the evildoer, or they sunned him before the people, or they cut him to pieces.

THIRD PARAGRAPH, in which is described how all were to dance.

The ruler was greatly concerned with the dance, the rejoicing, in order to hearten and console all the peers, the lords, the noblemen, the brave warriors, and all the common folk and vassals.

First the ruler announced what song should be learned. He commanded the singers to rehearse and practice the song and [to prepare] the two-toned

643 FOURTH PARAGRAPH, in which is told how
726 he who was the ruler kept vigil; how he kept guard at night and all day, because of war.

INJC NAUJ PARRAPHO: vncā mjtoa injc intoçoia in aquja tlatoanj, injc tlapiaia in iouiica: ioan in cemjlhujtl in jqipa iouiotl.

The ruler was especially concerned with the keeping of watch against enemies and the guarding of the city, all day and all night. Hence he gave stern commands that guard should be kept faithfully. For at times, suddenly, the City of Mexico was circled by foes; perchance somewhere for this they were gathered together, and were laying a snare. Therefore the ruler kept careful vigil. He did not become benumbed. He himself sometimes set forth by night, circled the city, and beheld what was done: perhaps the prisoners

or the master of the youths were not keeping watch, having already become addlepated.[10] And the ruler most sternly commanded that all the seasoned warriors and lords keep watch all day and all night in warlike lands and be concerned to be a rampart of men dexterous at arms in enemy paths. And they were to apprehend and seize informers who had entered here in secret, who walked about the city. And they perceived when war was to be proclaimed. And when war already was declared, then they hastened to enter [their city] to warn their lords so that then they would ready themselves for guarding against the foe.

And if informers[11] were seized, they were slain; they were beaten, because of what they made known. And if it were noted that some knew the Mexicans and were living with them in their homes, they also imprisoned the informers of the ruler's foes, with the householders who had been plotting with them, and their children, and plundered their goods, so that nothing[12] was to be seen in their homes.

And likewise the ruler urged strongly that watch be kept within the city, all day and all night, lest someone betray the city, lest it might be surrounded by enemies. And therefore sometimes the ruler and the city would march forth. And the ruler commanded that rulers of the youths, the brave warriors, and all the youths, each day, at night, should sing and dance, so that all the cities which lay around Mexico should hear. For the ruler slept not, nor any of the Mexicans.

And when it was deep night, then the priests of Tenochtitlan and of Tlatilulco, and [men from] all the hamlets [nearby], blew shell trumpets and beat two-toned drums. Then all the priests went forth. Everywhere they performed penances all about the mountain tops. And thus they kept watch lest they come upon something. [When] already it grew light, they went into [the city]. Thus they kept guard each night; thus did they do.

342 And in the great palace, the ruler's residence, like-
643 wise was watch kept all night. Never did the fire go
[373] out. It was watched all night and made to burn with
644 pine torches there in the residence of the ruler—at
722 the Tlacxitlan, and the Teccalli, and the Tecpilcalli, the Quauhcalli, the Achcauhcalli, the Cuicacalli, the Cuecalli, and the residences of the lords throughout the city, and the priests' houses, and the majordomos' houses—where assembled the majordomos,—and the young men's houses which were placed in all the neighborhoods.[10] Then the youths filled the houses as they kept guard. None slept in his [own] house.
[373] The task of the youths was to go into the forest, in order that watch be kept within the city; for nightly there was light and fires were burned; thus was guard maintained.

643 FIFTH PARAGRAPH, in which is told how the
542 ruler was amused.

The ruler, when he beheld and knew that the common folk and vassals were very fretful, then commanded that the ball game be played, in order to animate the people and divert them. He commanded the majordomos to take out the rubber ball, and the girdles, and the leather hip guards, and the leather gloves with which the ruler's ball players were dressed and arrayed. And things were arranged on the ball court; there was sprinkling, there was sanding, there was sweeping.

643 And all which the ruler was to wager in the game
525 —the valued capes, the duck feather capes, the costly breech clouts, the green stone lip plugs, the golden ear plugs, the green stone necklaces, the golden necklaces, the wrist bands with large, precious,[14] green stones upon them, and all the precious capes and bedding—the majordomos brought out and placed in the ball court. And those who were to challenge and play ball against the ruler then matched all his costly goods. And all the poor folk placed [for] the ruler, each one, old capes like those which the vassals wore. And if they won from the ruler, then the majordomos brought out others and laid out all the costly goods which they had won of the ruler, and also they gave to the vassals all which they had won of the ruler.

13. *Tlachcalhuehuetl*: see Antonio Mirandé, *El calpulli en la organización social de los aztecas* (México: Instituto de Historia, 1949), p. 51, where the term *tlachcalli* is defined as a small barrio or street. According to Orozco y Berra, op. cit., I, p. 348, "los pueblos quedaban subdivididos en menor calpulli *i barrios*, cuyos los parcialidades eran, cada calpulli dividido por calles *i tlachcalli*."

14. *Tlaçotl*: the corresponding Spanish text refers to *chorro*, in which case the Aztec should read *chaçotl*.

When he wished to be amused, the ruler commanded that they play *patolli*, that a mat on which *patolli* was played be painted black, in widely spaced stripes. So was it painted that there might be kept the count whereby the game could be won. And then also holes were drilled into the surfaces of four large beans with which *patolli* was played and the game was won. And in the same way the majordomos did [as in the ball game]:[10] they spread out all the costly goods and belongings of the ruler, there where *patolli* was played, where [players] represented the ruler. And then, if the ruler were bested, then the majordomos brought out other [players]; and they changed all the vessels whom the ruler had set in place that *patolli* be played.

SIXTH PARAGRAPH, in which is described the ruler who was good of heart and kindly.

The ruler was very indulgent of others, very merciful, and kindly. When he wished, he set forth along the road, following it. If any poor vassal, who made bold to hail the ruler, greeted him pleasingly, then [the ruler] commanded the majordomo to give him a cape, a breech clout, and a place for him to sleep, and that which he might drink, and eat—dried grains of maize, beans, amaranth seed. And if a lowly woman made bold to greet the ruler, he likewise granted and accorded her her shift, her skirt, a place for her to sleep, what she might drink and eat—grains of dried maize, beans, amaranth seed. And if some poor indigent were to fashion or make so many skin drums, or a song of honor, if then he dedicated them to the ruler, if he gave them [to him, the ruler] showed great compassion and indulged him; he gave him a house, he enriched him; he gave him whatsoever goods lay in the house; and he gave him a steward who daily might care for him, give him to eat, provide him his breakfast, wherewith to break his fast, and provide him wherewith to sup. And he gave him all [manner of] gifts—costly capes, beds, wealth, women, and a slave, and honor.

6: Sahagún M-5 (1529-1590) 1954 NU7 Aztec NU7

Eighteenth Chapter, in which it is told how they chose those who would govern.

The ruler was thus given office and chosen. The lords assembled and deliberated as to whom they would set in office and choose to be ruler. In the same manner assembled the old men and the seasoned warriors, brave warriors, men [at arms], and the leaders of the youths; lords; and keepers of the gods; fire priests—the long-haired ones.[1] All were gathered there at the great palace, the residence of the ruler, in order to consult and choose him who was to be ruler. They cast votes for all the princes who were sons of lords; men [at arms]; brave warriors, experienced in war, who shrank not from the enemy;[2] who knew not wine—who were not drunkards, who became not stupefied;[3] the prudent, able, wise; of sound and righteous rearing and upbringing; who spoke well and were obedient, benevolent, discreet, and intelligent.

And when were settled the deliberations and choosing, they were as one [in their] accord. When a certain prince was chosen and given the charge of being ruler, then also were raised to their office and chosen those who were to help him, the [four] princes who would be by his side; who would be his lords. They were invested with, and given, the titles Tlacochcalcatl, Uitznauatlailotlac, Pochtecatlailotlac, and Ticociauacatl.

When this was done, when the choosing was settled, then was determined on what good day sign would be installed those who had been elected—the ruler and the lords. Then the command was given when there would be a meeting, and all the noblemen were commanded then to come to assemble in the courtyard of the Temple of Uitzilopochtli.

643 And some of the noblemen who feared the office of ruler hid themselves and took refuge [from those who might choose them].[4]

643 FIRST PARAGRAPH, in which is told how they
644 arrayed those who had been elected when they did penance, and led them to the house of Uitzilopochtli.

And at this time were brought together, according to command, the noblemen, the lords, the masters of the youths [who were] leaders, and great judges. When those lords were assembled, then they commanded the keepers of the gods, the long-haired ones, to seek out and go to take among themselves, those who had been chosen: the one whom they had named ruler and those whom they had named lords. When they had been put in office, then the keepers of the gods, the long-haired-ones, went to take, wheresoever he was, the one who had been vested in the office of ruler. Then they speedily laid hold of him; before them, all the people beheld him.

643 Then they took him before the lords. He went
292 bare. They put on him a green,[5] sleeveless jacket. And they had him carry upon his back his tobacco gourd with green tassels. Then they veiled his face, they covered his head [with a] green fasting cape designed with bones. Then they gave him his green[5] cotton bag filled with incense and decorated with bones, and they put on him his new foam sandals with green toes. They placed in his hand his incense ladle, also painted with the skulls of the dead, and with paper pendants [on the handle].

643 And these long-haired ones, keepers of the gods, went to take the ruler, making him go up before [the image of] Uitzilopochtli. When they had brought the ruler to the top [of the pyramid temple], then he took incense, poured it into the incense ladle, in which there were live coals. Then he raised it before [the image of] Uitzilopochtli in order to perfume it. He stood always with his face covered by the fasting cape designed with bones. And all the common folk stood looking up at him. Trumpets were sounded; the shell trumpets were blown.

644 And these lords—the Tlacochcalcatl, the Uitznaua-
292 tlailotlac, the Pochtecatlailotlac and the Ticociauacatl—the keepers of the gods, the long-haired ones, then also speedily adorned. Each one they dressed in his

SECOND PARAGRAPH, in which it is told how those chosen did penance there in the temple and came not forth for four days.

And when this was done, and they had offered incense and spread a fragrance before Uitzilopochtli, then they brought down the ruler, the lord of men; he went covered with the green fasting cape with a design of bones. Then they also brought down each one of the lords. They went quite slowly in order; they went with faces veiled, each one, with the fasting cape with the bone design.

The keepers of the gods, the long-haired ones, went taking them in their midst. They took [the ruler and] they escorted[7] [the lords] there to the house of fasting, a place named Tlacochcalco, or Tlacatecco, the house of Uitzilopochtli. There they fasted and did penance for four days. Nowhere went they forth; they only remained seated. When it was already midday, then the keepers of the gods, the long-haired ones, also went; the ruler and the lords in the Tlacatecco, who fasted there, they seized—they went taking them in their midst. They went with faces veiled in fasting capes; in the hands of each one went his incense ladle, and each one went taking with him his cotton bag filled with incense. Slowly and in order they went to take them up, above to [the Temple of] Uitzilopochtli, to offer incense, to spread a fragrance before [the image of] Uitzilopochtli. In the same way they came down; they came in order; they came with faces veiled in fasting capes designed with bones. Then was the time

643 644 that the ruler and the lords ate; only once a day did they eat.

783 785 And at night, when midnight arrived, the ruler and the lords arose, covered with the fasting capes. And they took up their incense ladles and cotton bags filled with incense, and maguey spines; and they were shod in their foam sandals. And these keepers of the gods, the long-haired ones, took them in their midst—they took them above, to [the Temple of] Uitzilopochtli, to offer blood at midnight. And they offered incense; there they cast incense before [the image of] Uitzilopochtli.

In the same manner they came down. They went in order. The keepers of the gods, the long-haired ones, took them in their midst, with their faces veiled in fasting capes designed with bones. When they had descended, then they went to bathe—the ruler and the lords. Thus did they do penance at night.

For four days they fasted, with faces veiled in fasting capes. And for as many days, at noon, they offered incense before [the image of] Uitzilopochtli. Likewise, for as many nights, at midnight, they offered incense and made blood offerings before [the image of] Uitzilopochtli, and they bathed themselves.

THIRD PARAGRAPH, in which it is related how they ended the penance, and took the ruler to the courtyard of the palace; and the others they took to their homes.

And after this, when the four days and four nights were ended during which the ruler and lords had fasted and done penance—at that time the ruler came forth, that they might escort him there to the great palace, the ruler's residence. And also at that time the lords entered their homes.

[77] And when this had come to pass, then the ruler chose a propitious day on which the ruler's feast might be observed. He commanded all the majordomos to accord others and give them all capes, and costly devices, and shields.

of Uexotzinco,[8] and the lords of foreign lands, and the lords of Tzapotlan, and the lords of Anauac, and the ruler of Tehuantepec, and all the lords posted on the shores of the oceans, and all the lords of the cities encircling Mexico—the ruler of Texcoco and the ruler of Tlacopan.

And when all the invited lords had assembled—[both] friendly and unfriendly lords—he provided them food. He gave them drink and food; costly goods he gave them all: capes without price, and valuable breech clouts, and devices, and costly shields. There was dancing; there was a procession; there was singing, night and day, as the ruler provided them solace.

And at that time he also gave gifts to all the noblemen, brave warriors, and lords, and judges, and rulers of the youths, and all the singers, and all the keepers of the gods, fire priests, and [other] priests.

And when the feast ended, then all the hidden guests departed.

FIFTH PARAGRAPH, in which it is told how the ruler adorned himself when he was to war upon some city.

And then, when some days had passed, the ruler proclaimed war—that they would go to set forth somewhere to war. He gave costly devices and shields to the noblemen and to all the brave warriors and men [at arms]. And the ruler himself went to war. To set forth to battle and to conquer, he took all the warriors, and the lords of all the cities about, that they might set forth to war and conquest. And when they had gone forth to conquer and to wage war, they rejoiced greatly over the number of captives whom they had taken, since they would slay them all before [the image of] Uitzilopochtli in order with them to observe his feast. And he accorded honor to all the brave warriors and captors; with many things did he favor them. He gave them costly capes, and breech clouts, and long labrets, and head bands; and he gave them titles by which they would be honored and obeyed as men [at arms] and brave warriors.

Ninetenth Chapter, in which is described the ordering of the market place, and [how] the ruler took great care of it.

Ic caxtolli onnauj capítulo, ipan ninjtoa, in tlatecpanalizti in tianquijsco: sub in ichoxtl tlatoanj, cenca qujmocujtlaujaia.

The ruler took care of the directing of the market place and all things sold, for the good of the common folk, the vassals, and all dwellers in the city, the poor, the unfortunate, so that [these] might not be abused, nor suffer harm, nor be deceived nor disdained. Thus were things bought, or sold: they arranged them in order so that each thing sold would be placed separately—in its own place or station. They were not spread about in confusion.

In tlatoanj qujmocujtlaujaia ipan tlatoaia in tianquijztli, ioã izquijch tlanamactli, impampa cujtlapilli, atlapalli, maçeualli, ioan izquijch aca, tepena in jcnotlacatl, in motolinja, injc amo quequelolox, injc amo xixicolox, injc amo ica necacaiaoalox, injc amo nexictilox, injc motlacouja, in anoço itla qujmoteumaqujlia qujtecpanaia, injc nononqua monamacax, icecentlamantli tlanamactli, çan iietian, çan iooneian, amo ixneliuhtoca,

Market place directors were appointed to office. They cared for, and attended to, the market place and all and each of the things sold—the merchandise which was there. Each of the directors took care, and was charged, that no one might deceive another, and how [articles] might be priced and sold.

Dicen que tienen, y los tordos del agua, por tiempo se crecen en pasar, dicen que los que están entre a bandas en la mar, dicen del agua, y que nunca más parecen*" (*ibid.*, p. 170). Cf. also Sahagún, *Rimas Kaqueal*, p. 125, n. 1; Cecilio A. Robelo: *Diccionario de Aztequismos* (Cuernavaca: Imprenta del autor, 1904), pp. 542-543. Santamaría, *op. cit.*, I, p. 487 (*chichicuilote*) says there are two species—*Phalaropus wilsonii* BP and *Lobipes lobatus* L.

5. *Pipitzcua*: "*son blancos y del grandor de palomas, tienen alas anchas, crían junto la mar, y al tiempo de coger el maíz vienen así dentro a la tierra; cuando entran aquí vienen, cuidadosos que es tiempo de coger el maíz*" (Sahagún, *op. cit.*, p. 183). In Santamaría, *op. cit.*, II, p. 485, these are *Larus franklinii* SW or Rich, currently called *apipizca*.

6. *Tlalcuacuil*: "*buenos mucho . . . . grandes como las de España; tienen los pies colorados y el pico, son pardillos; tienen buena carne; tienen debajo plumas blancas y blandas, (y) de estas plumas se aprovechan para hacer mantas; las plumas de encima son ruines, tienen buenas colmenas para comerlas*" (Sahagún, *op. cit.*, p. 169). These (*tlalcuacuil*), according to Santamaría, *op. cit.*, III, p. 194, are *Anas diepiosa* Gld.

7. Cf. Chap. 13, n. 22, *supra*.—"*Cuerpo grande de color blanquecino chiluyoso, muy sazonado y metalado con alli*" (Sahagún, *op. cit.*, p. 182)

8. Cf. Chap. 13, n. 20, *supra*.

9. Cf. Chap. 13, n. 10, *supra*.

10. Cf. Chap. 13, n. 7, *supra*.

11. Cf. Chap. 13, n. 6, *supra*.

12. Sahagún, *op. cit.*; note also, however, Chap. 13, n. 7, *supra*.

13. *Tecocotl*: *tejocote*—*Crataegus pubescens* Mart. (Santamaría, *op. cit.*, III, p. 198).

14. *Cacomitl*: *cacomixtle*—*Tigrisdus pennicii* Kerr; *cacomistlerd*, of edible root (*ibid.*, I, p. 254). Also Hernández, *op. cit.*, II, p. 657.

15. *Cimatl*: *cimate*, a condiment (Santamaría, *op. cit.*, I, p. 392). In Hernández, *op. cit.*, II, it is identified as *Dioscorea composita* Hemsl. (p. 659) or *D. parviflora* Mart. y Gal (p. 661).

16. *Chayotl*: *chayote*—*Sicyos edulis*; *Sechium edule*. *Cucumis sativus*/*sylvestris* (Santamaría, *op. cit.*, I, p. 477). In Hernández, *op. cit.*, I, p. 149, *Sechium edule* Sw.

17. In Hernández, *op. cit.*, I, pp. 171ff., various kinds of *quauhcacauatl* are identified as *Sarcopha rurosa* Linn., *Manihot utilissima* (?) Pohl, *Crescen sp.*, *Canis familiaris* Linn.

18. *Ixcuitlaxcal*: *cuetl* (maguey), *cuitlaxcal* (principle, continuing), in Molina, *op. cit.*).

19. Remazar, *op. cit.*, p. 213, notes that Sahagún must be in error in translating *tetzmolinqui* as *cardoon*, since the latter is not native to Mexico; the Badianus MS (Pls. 10, 73) illustrates a thistle (*Cirsium sp.*). Santamaría, *op. cit.*, II, p. 82, describes it (*tetzmolinqui*) as, "*En México especie de alcachofa*" (artichoke).

19a. See Sauer, *op. cit.*, pp. 545-6, 549. Sauer suggests that "*huauhtzontli may be a corruption of . . . cuauhtzontli*," a *chamaepilum*: *C. Huauhtlac* and *C. pseudomas* not mentioned.

20. *Xocoxocotl*: *tecopal*-*Oxalis corniculata* H. B. K.; *O. corniculata* L.; *O. corniculata* Dc. (Santamaría, *op. cit.*, II, p. 154); Sauer (*op. cit.*, p. 236) mentions other varieties of *Oxalis*, but on p. 213 notes that the same sorrel is used also for *Rumex* (*sedgrass Angrass*), and that *xocoxocopalli* likewise identifies two species of *Begonia*.

sons; bean greens[21] and green beans; green maize, tender maize, tender maize stalks; tamales of maize blossoms, tortillas of green maize, and all edible things—tortillas, tamales, tamales and tortillas with honey, large tortillas, and rolled tortillas.

And also there were proprietors among whom were spread out smoking tubes, pipes, and cigars, [some] quite resinous and aromatic; and tobacco bowls; and large pottery braziers and hearths, and earthen basins, and pots, and jars for storing water, and settling jars, and flat cooking plates, and sauce vessels, and earthen cups, and everything [made of] earthenware.

And those who were directors of the market place, if they did not show concern over their office, were driven forth and made to abandon their office. And if someone sold stolen goods—perchance a costly cape, or a green stone,—if it were made known and he did not declare from whom he had bought that which had been stolen, they went to exact the penalty, and he died. Such was the sentence of the lords and judges, so that [men] would be fearful of that which was stolen and no one would buy it.

It was the duty of the market place folk to make the war provisions—biscuits, and finely ground, dried maize and chía seeds, and dried maize dough, and dried, lime-treated maize dough. With these was the market place charged, and the market place directors, the men and women thus appointed, were charged with assigning the tribute.

565 **Twentieth Chapter, in which is told how they reared the sons of lords and noblemen.**

And here is described the rearing of the sons of those who were lords, and of all the princes, who were the sons[1] of lords and noblemen.

[854 Their mothers and fathers nourished and raised them, or nursemaids raised them while they were 855] still small children.

565 And when they could run, when they were per-
855 haps six years old, thereupon [the boys] went [forth] to play. Their pages—perhaps two, or three—accompanied them that they might amuse them. [The child's] father or mother charged them [pages] that [the boy] not behave ill, that he not [illegible] himself with vice, as he went along the stree[illegible]

565 And also they took great care that he should con-
867 verse fittingly with others—that his conversation should be proper; that he should respect and show reverence to others—[when] perchance he somewhere might chance to meet a judge, or a leading militia officer, or a seasoned warrior, or someone of lesser rank; or a revered old man, or a respected old woman; or someone who was poor. He should greet him and bow humbly. He said: "Come hither, my beloved grandfather; let me bow before thee." And the old one who had been greeted then said: "O my beloved grandson, O precious stone, O precious feather, thou has shown me favor. May it go well with thee."

And when the young boy thus saluted others, they praised him highly for it. They rejoiced greatly over it; they were joyful because of it. They said: "How will this beloved child be, if he shall live? He will in sooth be a nobleman. Mayhap his reward will be something [great]."

565 And when he was already maybe ten, twelve, or
871 thirteen years old, they placed him in the priests' house; they delivered him into the hands of the fire priests and [other] priests, that he might be reared

565 868 701 And when he was already fifteen years old, then he took up arms; or, reaching twenty years of age, then he went forth to war. First [his parents] summoned those who were seasoned warriors. They gave them to eat and to drink, and they gave gifts to all the seasoned warriors. They gave them large, cotton capes, or carmine colored breech clouts, or capes painted with designs. And then they besought the seasoned warriors; in just the same way as hath been told above, so they entreated them.

Auh in jconac ic cactolziuhtia iconac moiaomanaxtia anoço açi cempoalxiujtl injc quiça iauc, in ichoantia tequjoaque achtopa qujnnotza qujntlaqualtia. qujmatlitia, ioan qujntlauhtia in jxqujchtin tequjoaque, in qujnmaca açe quachtli anoço nochpalmaxtlatl, anoço tlacujlolli in tilmatli. Auh njman qujtlatlauhtia in tequjoaque, çan ic no iuhquj in ompjo tlacpac injc qujntlatlauhtia.

And then they took him to the wars. The seasoned warriors went taking great care of him, lest somewhere he might be lost. And they taught him well how to guard himself with a shield; how one fought; how a spear was fended off with a shield. And when a battle was joined, when already there was fighting and perhaps already captives were being taken, they taught him well and made him see how he might take a captive. Perhaps then he took a captive with the aid of others, or he [alone] could take one.[2] For truly it was well seen to that many men become brave warriors.

[202] And when captives were being taken, then at once couriers, of marriageable age, quickly went forth, called victory messengers, who speedily went to inform Moctezuma.[3]

Auh in ic tlamalo, njman achtopa oalpeuhtiquiça in tequjnque tlapaliuj, intoca tequjpan titlanti in qujoalnonotztiuetzi motecuçuma:

And when the victory messengers had come to arrive, then they quickly entered into the presence of Moctezuma and said to him: "O our lord, O my youth, pay thy debt and thy service [to the god]; for the omen of evil, Uitzilopochtli, hath shown favor and been gracious. For they have pierced the rampart of men dexterous in arms of the city against which they have gone. Into it have marched[4] the Mexicans of Tenochtitlan, the Mexicans of Tlatilulco, the Tepanecs, the Acolhua, the Otomí, the Matlatzincas,

and finally all the people of the uplands and those of the swamp lands."[4]

And Moctezuma said to them: "You have tired yourselves; you have suffered affliction, O men dexterous in war. Rest yourselves. [But] perhaps you only feel me. Let me still behold the truth of your account."

And then he confined them. If the report which they had made were not true, Moctezuma jailed them and did away with them

And there in battle was when captives were taken. When it had come to pass that they went against and conquered the city, then the captives were counted, there, in wooden cages: how many had been taken by Tenochtitlan, how many had been taken by Tlatelulco, and by the people of the swamp lands and the people of the dry lands everywhere. The captives were examined [to determine] how many groups of four hundred were formed.

Those who counted were the generals and the commanding generals. And then they sent messengers here to Mexico. Those who were sent as messengers were seasoned warriors, who informed Moctezuma of the great veracity of the four-hundred count. They brought word of how many groups of four hundred had been made captive.

And then they declared to him how many of the noblemen had won their reward for having made captives; that haply a number [of them] had had their hair shorn as seasoned warriors, or that some [had been made] leaders of the youths. When Moctezuma heard this, he rejoiced exceedingly, because his noblemen had taken captives. And at that time he freed those whom he had cast in jail—the victory messengers—and he gave them gifts along with the others.

And if war should be proclaimed against Atlixco, or Uexotzinco, and if there once again they took captives, they won much glory thereby; Moctezuma accorded them great honor for it. For his noblemen had taken captives, and had gained repute, and had reached the station of nobility—the estate of the eagle and the ocelot warriors. From there they came to rule, to govern cities; and at that time they seated them with [the nobility], and they might eat with Moctezuma.

7. A passage omitted from the *Florentine Codex* has included in the *Real Academia de la Historia* MS, ending this chapter, has been placed in Appendix B.

Twenty-first Chapter, in which is told how all arose through the ranks until they became judges.

And behold how began the life of the young boy. At first, while still a small boy, his hair was shorn. And when he was already ten years old, they then let a tuft of hair grow on the back of his head. And when he was fifteen years old, then the tuft of hair became long. [This was] when he had nowhere taken captives.

And if he took a captive with the help of others —perchance doing so with the aid of two, or of three, or of four, or of five, or of six, at which point came to an end [the reckoning] that a captive was taken with others' help—then the lock of hair was removed. And thus was the division of their captive: in six parts it came. The first, who was the real captor, took his body and one of his thighs—the one with the right foot. And the second who took part [in the capture] took the left thigh. And the third took the right upper arm. The fourth took the left upper arm. The fifth took the right forearm. And as for the sixth, he took the left forearm.

And when the tuft on the back of his head was removed, he was shorn so that he was left [another] lock: his hair dress kept, on the right side, the hair hanging low, reaching the bottom of his ear; to one side [only] was his lock of hair set. When this [was done], he assumed another face, he appeared otherwise, so that it might be seen that he had made a captive with the help of others [and that] the tuft of hair on the back of his head had been removed.

And then his grandfather, or his beloved uncle, addressed him. He said to him: "My beloved grandson, the sun, the lord of the earth, hath washed thy face. Thou hast taken another face; and thou hast gone to throw thyself against the foe. Let them take thee if, without profit, once more thou takest a captive with the aid of others. What wouldst thou be? Wouldst thou have a young girl's lock of hair? Take care lest thou again take a captive with others' help. Cast thyself against our foes."

624 And when he captured three, likewise his gifts
729 were provided, and he took [the office] of, and they
861 established him as, a master of the youths, a leading
561 youth. He entered a place of dignity, the young men's house, there to nurture and rear [them]. There he reared the young men, there where there was song and dance at night, there in the song house.

Auh inic ei cacipan ie no iuhqui in inetlauhtil mochioa, auh oncan canaia in quimachauhtecaia in telpochiiaqui quicilaquixia inuchican in telpochcali inic ompa tlacaoapaoa tlacaxcaltia ompa quimiscaltia in telpopochti, on cuicoinocaia in ioaltica in ompa cuicacali.

1. Following quitecuauhtzin, the *Real Academia de la Historia* MS has yeuan ompa quimpanoaia—and there they pasted feathers on their heads. This passage is missing in the *Florentine Codex*.

2. The corresponding Spanish text reads: "una manta con unas listas labradas de color amarillo; y otra manta labrada de otras colores labradas de colorado que se llamaban cohuilquilli; y . . . un maçilo labrado de colorado, largo que colgaban hasta colgado, y otro maçilo labrado de muchos colores."

6: Sahagún M-5 (1529-1590) 1954 NU7 Aztec NU7

And when he took four, Moctezuma then let his hair be cut like that of a seasoned warrior. He was named a seasoned warrior. And then also he assumed the titles of a seasoned warrior—perchance Mexicatl tequiua, or Tolnauacatl tequiua, or Ciuatecpanecatl tequiua: all the titles of a seasoned warrior. And then in truth was when they placed him on the mat and stool of the warriors' house—there where were gathered the great, brave warriors, where were the Tlacochcalcatl, the Tlacateccatl, the Ticociauacatl, the Atempanecatl—those who were great captains, who had long labrets, who had leather ear plugs, who had head bands with [two] eagle-feather tassels, with which [their hair] was bound.

And if six, or seven, or ten Huaxteca, or barbarians,[3] were taken, he gained thereby no renown. For this his title was only seasoned warrior.

Then if he went to take captives at Atlixco, or Uexotzinco, or Tliliuhquitepec, for the fifth one whom he captured, then he gained great honor. For this his name was that of a great, brave warrior—a great captain. Then Moctezuma gave him a long, blue labret and a head band with [two] tufts of [eagle] feathers,[4] perchance with silver flint knives [between the eagle feathers], and leather ear plugs, and a bright red, rich, netting cape. And also he was then given a cape of two colors divided diagonally; and a leather cape.

And if he went to take two [captives] from Atlixco or[5] Uexotzinco, then already he filled everyone with awe. Then they gave him a long, yellow labret; he required[6] both the blue [and the yellow] long labrets.[7]

Appendix A

Continuation of the Fourth Paragraph, Chapter Fourteen[1]

In the priests' house of Mexico, there were established and congregated all the keepers of the gods, the fire priests, and [other] priests, the city's devout ones. There they waited [lest] perchance the ruler might require something—perhaps inquire about something, mayhap of something they had seen in all the places where debts [of sacrifice] had been paid upon the mountains and upon the water; there where, afar, were the small pyramids where each night they performed penances.

For these who were fire priests and other priests, when they came forth well into the night, and when, as was said, the shell trumpets were newly blown, first drew their blood before the devil, with thorns, the spines of the maguey; then each one separately set forth, going quite naked. They went [out] having put about them only their pouches with cords,[2] which went filled with dyed, powdered tobacco—this tobacco mixed with a black [dye]—which they chewed as they went. And one proceeded taking with him an incense ladle in which fire went enclosed; and a small cotton bag in which was incense; and pine wood; and he carried his fir branches in his arms, as well as his spines covered with blood, and a shell as his trumpet. And even though it rained hard or was freezing, just so he went.

When he reached whatsoever mountain he was to perform his due upon, then and there he paid his debt [of sacrifice]. He offered incense; he spread out his fir boughs, his bloodied maguey spines. He listened for the time when trumpets were to be sounded in Mexico, at midnight. And when the trumpets had been sounded in Mexico at midnight, then the priests, they who did penance, blew trumpets everywhere there upon the mountains where they paid their debts. Then they turned back, sounding trumpets as they went, in the dawn, when they again entered the priests' house.

Appendix B

Continuation of the Twentieth Chapter[1]

. . . Then were rewarded the seasoned warriors who had brought word of the great veracity of the four-hundred count.[2]

. . . in iquac motlauhtia tequiuaqz,[3] y uel ymelauaca i ye ycentzontecca, oquiualitq'qz tlahtolli. 202 701

And in this wise the messengers entered; if the flesh of men had been taken captive, it was thus soon made known—all came tying and binding their hair, for the flesh of men had been taken and they thus made it evident. And much did the common folk rejoice when the saw them [and noted] that they came binding [their hair]. They said: "And so[4] the flesh of men hath been taken captive; for all the messengers go with bound [hair]!" And if some came separate [from the others], and came no more with their hair tied and bound, but went with it quite loose, thus they made it known that [our men] had been made captive and that there had been losses in the war. And when the common folk saw them, then a cry of grief arose. Then they said: "And so[4] there have been losses!"

And the noblemen, when they had taken some captives, did not anoint themselves with yellow but rather stained themselves with red ochre, which they put on all over; and they were pasted with eagle down. And Moctezuma rewarded them all with princely capes and breech clouts of great value and high honor, and with preciously wrought quetzal feather devices [ornamented] with gold, and with shields with, perhaps, quetzal feather garlands—very rich shields.

And at the time when the captive was to die, then

Auh i ye yquac miquiz malli. ỹ yehuatl tlamani 000

1. See ending of Chapter 20, above.

This passage originally, in the *Real Academia MS*, completed the section ending *tlatoani quinitlachaua mantlatlamaloni*. The remaining part of Chapter 20 thus appears as an interpolation.

2. The abbreviation for the ending *-qtzi* in the original resembles *-qz*, and is thus reproduced here.

3. This phrase appears capable of more than one interpretation: cf. Molina, *op. cit.*, *tlatecatequilia*, and *cruelmente tequilia*. Seler's translation of a similar passage in Chapter 20 (*Einige Kapitel*, p. 331)—*iye uel y malauaca intecatecaca*—is "*in richtiger Weise die Zahl der Fürstenleute.*"

4. *Anca*: cf. Angel María Garibay K.: *Llave del Náhuatl* (Otumba, Méx.: [Impresos Mayo], 1940), p. 109; also Horacio Carochi: *Arte de la lengua mexicana* (México: Imprenta del Museo Nacional, 1892), p. 519.

And at the time when the captive was to die, then

782 Moctezuma presented the captor a device [with]
293 quetzal feather cups so that possessing it he might
727 slay him as a sacrifice. It did not belong to him; but having it he slew the victim, and he danced with it. He had his rattle stick with him, or the obsidian butterfly or quetzal feather cup [device] set with gold, which he carried upon his back. Possessing it, he slew him as an offering.

nimã ye ic quimaca im moteccuiçoma in tlauiztli quetzalcomitl inic ypan tlamictiz. amo uel ytech pouia çan ipan tlamictia. ypan mitotia ychicnuaz yetiuh. anoço itzpapaloti. anoço quetzalcomitl teocuitlayo in q'mama in ipan tlamictia.

796 And the captive he then took there where he was
727 to die, upon the round sacrificial stone; he proceeded to take the captive by the head, and lead him up there where they would slay him in the gladiatorial sacrifice. The one known as Old Wolf led him by the hand—he in whose care lay the captives, as if they had become his sons. And then he gave [the victim] his four pine cudgels, which he would hurl at his adversaries. And he gave him his shield, and his war club—not edged with obsidian blades but only pasted with feathers.

auh i yeuatl malli. niman ic quiuica in ompa miquiz temalacac icpac cantiuh contlehcauia, in oncan q'uahuanazqz malli. ymac concaua ytoca cuitlachueue. in imac onacitimanca mamalti iuhq'nma ypilhuã quinchiuaya. [793] And those who contended against him in gladiatorial sacrifice were the fire priests and the [other] priests. And the captor remained standing below; he stood regarding his captive. He who died was indeed before [his captor].

Auh y yeuantin in teuauanaya in tletlenamacaqz in tlamacazqz. auh in tlamani çam moquetzticac tlatzintlan quitzticac in imal. uel ispã im miq'.

[273] And after this, when the Old Wolf had arrayed the captive, thereupon he went, and gave him to drink wine which was called the gods' wine. He took it to him [in] a vessel [painted like] reeds and edged with feathers. When [the victim] had drunk, then he raised [the wine] in dedication [toward] where the sun came forth. So [Old Wolf] did with all the shields and war clubs; he raised all of them as offerings which he gave the captive. When Old Wolf had offered the captive [wine] and made him drink it, thereupon the slayer of the sacrificial victim went forth in order to sacrifice him. [He had] his shield and his war club edged with obsidian blades and covered with feathers.

Auh ỹ ye iuhqui in oçiencauh malli in cuitlachueue, niman ye ic yauh quitiz in octli tuihtouaya teooctli. inic quitq' acatecomatl ytlatempotonilli. in õya. niman ic coniaua in ompa tualquiça tonatiuh mochi iuh q'chiua in chimalli im macquauitl moch coniaua. inic cõmaca malli. auh in oconiti cuitlachueue. niman ye ic yauh in tlamicti inic q'uauanaz ychimal ymacquauh yetiuh tenitzyo tlapotonilli

And when he had drunk, then he struck at the captive, who likewise struck back. And if the captive were of stout heart, if he were verily a chieftain, really manly, perhaps three or four men fought him. Then, when he fell, they indeed slew him as a sacrifice. And if he were not manly, not a chieftain, then he cast himself there on the round sacrificial stone, and did not fight. Forthwith was he stretched out upon his back, and then they gashed open his breast, seized his heart, and raised it in dedication there [toward] where the sun came forth.

And after the sacrifice was offered, thereupon those who had made the sacrifice, who had slain [the victim], the priests, each one danced with the heads [of the captives], carrying them with them. And Old Wolf wept at this; he wept for his sons who had died.

Auh i ye iuhqui ommicouac. nimã ye ic mihtotia in tlauhuãnqz in otemictiqz ỹ yeuantin tlamacazqz. in ipan mihtotia cecentetl in tzontecomatl intlan caana. Auh i yeuatl cuitlachueue. niman ye ic choca q'nchoq'lia ỹ yehuãtin ypilhuã in omicqz. 796 727 793

And the captive[s] they then flayed; when it was dawn they were already flayed. [They] stood wearing [their] skins. Of each captive who died, their skins were all worn. Then they assembled at Yopico, in the courtyard of the devil. They had their shields, their war clubs, and their rattle sticks. And also came together the great chieftains, the battle-drunk, all important personages. With them were their staves; the pine staves lay in their hands, and they went carrying them.

auh i yeuatl malli nimã ye ic q'xipeua in tlathui ye totec, [çan moquetzticacqui]* in ieuayo. in isquichtin omicqz mamalti moch onneaquilo in imeuayo. oncan moceriquistia i yopihco in diablo itualco. inchimal immacquauh yetiuh inchicauaztopil. auh no mocenq'stiaya y ueuey tiacauan yetiui. i yaopan mjuintiani. uel isquich tlacatl. inquauh yetoc. yeuatl in ococquauitl immac onoc in quitquitoqz.

And when deep night was overspread, they did not take upon their wrists their shields, but took only their staves, as they awaited the time that the sun would burst forth. And when he came forth, thereupon the *tototecti* placed themselves in order—verily, all of them. And the chieftains, upon this, also placed themselves in order and contended against the *tototecti*. Perhaps they faced each other in the four directions. And then the chieftains started forth and fell upon the *tototecti*; they tickled their navels. Very swiftly they tickled them, and then they took after them and went skirmishing with them there in the place where they were, a place called Totectzontecontitlan. There the chieftains turned back; their only task had been to leave them there.

oc uel youã im moteca immac tlacuistoqz atle inchimal çanio in quauitl quitq'toqz. quichistimani in quemmã ualquiçaz tonatiuh. auh in oualquiz niman ye ic motecpana in tototecti. uel isq'chtin. Appendix C

Continuation of the Twenty-first Chapter[1]

. . . He alternated [his lip plugs] when he fitted them in. And [Moctezuma gave him] his head band [with two tufts] of eagle feathers [ornamented] with obsidian knives fashioned of gold, and his cape with, perhaps, the serpent mask design, or the earthen vessel fashioned of feathers, or the ocelot cape with a red border; and a breech clout with long ends, having either the eagle claw or the market place design.

At that time he acquired new sandals—not embroidered nor cut according to a pattern, but black, with their thongs of either orange or red leather. And when he went to the palace, he put the sandals on in order to go along the road. He went receiving great honors, because he was Moctezuma's chieftain. He proceeded with much acclaim. And when he reached the Eagle Gate he drew off the sandals which he had put on; he was no longer shod when he entered the royal palace, where were the great men dexterous in arms, the war leaders.

And also at that time he won the title known as general or commanding general. If the general or commanding general were to die, then [another] would be chosen and selected [from among] those who had been made their deputies. They said that they had become lords of the sun.

And all the seasoned warriors, who had entered the field of battle, all these Moctezuma rewarded. When the Feast of Tlacaxipeualiztli was celebrated, he gave each of them four pieces of black cloth, each eight measures broad. And likewise he gave the leaders of the youths the cape of scorpion design with a striped, orange border and the carmine colored breech clout with the wind jewel design at the ends.

And [as for] those whom we knew to be seasoned war leaders and leaders in the fray, then started [the custom] that Moctezuma [had] the hair of those who were chieftains cut as shorn ones or as Otomí [warriors].

When and wheresoever war was proclaimed, always they remained guarding and paying heed to

701 721 their estate as men dexterous in war, as men of valor, as chieftains. Thus none, when they went, might take account that they might die. [For] if war were not proclaimed, if they were not to go off to die, none might know for how much time they might live. And if war were proclaimed, then set forth together the assembled men of Mexico. The generals and the commanding generals led them. When they reached the place which they were to conquer, upon the next day they disposed them in battle array.

imoceloyo inic oquichti inic tiacauã. inic ayac ỹ uiui ça quipopouhtinemi in immiquiz. im ma ualmihto yaoyotl im ma ommiquiti ma oce ontlamati in oc quesquich cauitl nemizqz, auh intla oualmihto yaoyotl nimã cemolini i ye istlacatl mexicatl. in teyacana tlatlacochcalca. tlatlacatecta in oacito in õpa tepeuazqz. oc cemilhuipã ĩ yaoteca.

726 687 And there on the battlefield went the shorn ones in pairs. The Otomí [warriors] also went in pairs. If one of the shorn ones died in the fray and if the other of the shorn ones turned tail, then Moctezuma [had an official] take after him. No more might he enter the Eagle House; they kept him shut away in his [own] house. Of no further use was he. And they suspended the shorn one. And in the same way they exacted penalty of Otomí [warriors] if one of them died [in battle] and if the other fled. They took after him; they suspended him as chieftain. And also they deprived him of rank if he showed fear.

auh i ye ompa yaoc. ommettitiui in quaquachicti. no omettitiui. in otomi. intla ce oyaomic quachic. intla oc ce ualmocuepa quachiqz. niman ic quitohtocaya ĩ moteoçcoma. aocmo calaqz in q̃uhcali. ça iccen quicallatiaya. aocca moneqz. auh q'caualtiaya inic quachic. 701 431 643 And perhaps in a year or two [Moctezuma] remembered him, sought him out, and drew him from his home. And when he went before Moctezuma. thereupon he gave him again the devices, perhaps [ornamented] with quetzal feathers or with gold. Then [the ruler] gave him gifts; he presented him a bundle of capes, and provided him with grains of maize—he gave him a canoe full of maize grains; and he provided him with *chia*—he weighed out two large measures of *chia*. And thereafter once again he placed himself among [those in] the Eagle House, because he merited once more assuming all the costly capes and breech clouts and all the honors which were his.

auh in quilnamiquia aço ce xiuitl anoço õxiuitl. in quitemouaya. ychan in q'ualanaya. auh in õya ispã motecuiçoma. nimã ye ic q'ualmaca in tlauizzli aço quetzallo. anoço teocuitlayo. niman quitlauhtia, cen q'milli in q'maca tilmatli. yuã quitlaoltia cem acalli in q'maca tlaolli yuan quichientia. aço ontetl y ueytzincopinq' ic q'tamachiua chien. auh quĩ ye no ceppa yquac tetlan motlalia in q̃uhcali. ypampa ca ontlamahceuh oc ceppa mochi q'cui in tlaçotilmahtli in tlaçomastlatl. in isq'ch ytech poui in imauizço.

701 726 And if, as a shorn one, or as an Otomí [warrior], he were to take a captive there at Atlixco or at Uexotzinco, much was Moctezuma's heart gladdened thereby. And all the lords were happy because of it; they were pleased and rejoiced therefor, that those who were shorn ones or Otomí [warriors] had taken captives: because men dexterous in war had surrounded [the foe].

Auh intla yquachicyo inĩla yotõyo ypan otlama in ompa atlisco anoço uexotzinco oc cenca ic paquia in iyollo motecuiçoma. yuan in isquichtin tlahtoqz ic papaqz ic motlamachtiaya ic ahauiaya. in oypan tlamahqz inquachicyo in imotõyo. ỹpãpa ca oquimiauayotito in quauhyotl in oceloyotl.

Then were drawn forth and chosen the general and the commanding general. Then the man dexterous in arms attained his end; such honor he won that no one anywhere might be adorned [like him]; no one in his [own] house might assume all his finery. For in truth [because of] his dart and his shield there was drinking and eating, and one was arrayed in cape and breech clout. For verily in Mexico were we, and thus persisted the reign of Mexico.

CONTENTS

TWELFTH BOOK

Page

First Chapter. Here are told the signs which appeared and were seen, when the Spaniards had not yet come here to this land, when they were not yet known to the natives here ____ 1

Second Chapter, in which it is told how those arrived who first came by boat, which, they say, was only one boat ____ 5

Third Chapter, where is told what Moctezuma commanded when he heard the account of those who saw the boat which first came ____ 9

Fourth Chapter. Here is told what Moctezuma then commanded when he knew that the Spaniards had come back: the second time [that] they came, [they did so under] Don Hernando Cortés ____ 11

Fifth Chapter. Here is related what came to pass when the messengers of Moctezuma went aboard the boat of Don Hernando Cortés ____ 15

Sixth Chapter. Here is told how the messengers of Moctezuma returned here to Mexico and came to relate to Moctezuma that which they had seen ____ 17

Seventh Chapter, in which is related the account by which the messengers informed Moctezuma of the boat which they had gone to see ____ 19

Eighth Chapter, in which is told how Moctezuma sent the magicians, wizards, and soothsayers so that they might do something to the Spaniards ____ 21

Ninth Chapter. Here it is told how Moctezuma wept; and the Mexicans wept when they learned that the Spaniards were very powerful ____ 25

Tenth Chapter, in which is related how the Spaniards slowly left the coast and marched ahead; and how Moctezuma left the great palace and went there to his princely home ____ 27

Eleventh Chapter. Here it is told how the Spaniards came to and reached Tlaxcalla, which was [then] called Texcalla ____ 29

Twelfth Chapter. Here is told how Moctezuma sent a lord, a great nobleman, and still many other noblemen, in order that they go to meet the Spaniards; and that with which each gave salutations as they greeted the Captain between Iztaccpetl and Popocatepetl ____ 31

Thirteenth Chapter. Here is related how Moctezuma sent still other soothsayers in order that they might cast a spell over the Spaniards, and what befell them on the way ____ 33

[p. vii]

000

Page

Fourteenth Chapter, in which it is told how Moctezuma ordered closed the road, so that the Spaniards might not come to arrive here in Mexico ... 35

Fifteenth Chapter. Here is told how the Spaniards departed from Itztapalapan in order to reach Mexico ... 37

Sixteenth Chapter. Here is related how Moctezuma went in peace and calm to meet the Spaniards there at Xoloco, where now standeth the house of Alvarado, or there at the place they call Uitzillan ... 41

Seventeenth Chapter, in which it is told how the Spaniards took Moctezuma with them as they went into the great palace; and what there happened ... 45

Eighteenth Chapter. Here is told how the Spaniards entered Moctezuma's princely home, and what happened there ... 47

Nineteenth Chapter. Here is told how the Spaniards commanded the Mexicans to observe the Feast of Uitzilopochtli; yet this came to pass not in the presence of the Captain, for at that time he had gone to the coast where Pánfilo de Narváez had arrived ... 49

Twentieth Chapter. Here is told how the Spaniards slew and destroyed the Mexicans who were celebrating the Feast of Uitzilopochtli in the place called the Temple Courtyard ... 53

Twenty-first Chapter. Here is told [how] war first began, when the Mexicans gave battle to the Spaniards here in Mexico ... 55

Twenty-second Chapter. Here is told how it became known that the Captain, Don Hernando Cortés, was coming, and that he was returning to Mexico ... 59

Twenty-third Chapter, in which is told how Moctezuma and a great nobleman of Tlatiluico died, and how [the Spaniards] had cast their bodies out before the gate — before the gate of the dwelling in which the Spaniards were ... 63

Twenty-fourth Chapter. Here is told how the Spaniards and those of Tlaxcalla set out and fled from Mexico by night ... 65

Twenty-fifth Chapter, in which is related how the people of Teocalhueyacan quietly and peacefully came to meet the Spaniards and offered them food when they fled from Mexico ... 69

Twenty-sixth Chapter, in which is told how the Spaniards reached Teocalhueyacan, and how the people there joyfully received them ... 71

Twenty-seventh Chapter, in which is told how the Mexicans came to and reached the Spaniards as they followed them at the rear ... 75

Twenty-eighth Chapter. Here is told how the Mexicans celebrated the Feast of Uei [teca]illuitl when the Spaniards had left Mexico ... 79

Twenty-ninth Chapter. Here is related how the plague came, named smallpox, of which the natives died, when the Spaniards set forth from Mexico ____ 81

Thirtieth Chapter, in which is told how the Spaniards fashioned their boats there at Texcoco, in order to come here to conquer Mexico ____ 83

Thirty-first Chapter, in which is related how the Spaniards came with the brigantines and took after those who were in boats in order to join battle with them, and then emerged and came to arrive near all the houses ____ 85

Thirty-second Chapter. Here is told how the Mexicans in terror left their city, from fear which they felt of the Spaniards ____ 87

Thirty-third Chapter, in which is told how the people of the floating gardens, those of Xochimilco and Cuitlauac, and of Itztapalapan, and still others, came to help the Mexicans ____ 91

Thirty-fourth Chapter, in which is told how the Mexicans took captive and seized fifteen Spaniards ____ 95

Thirty-fifth Chapter. Here is related how once again the Mexicans took captives and seized Spaniards, and, as counted, the captured Spaniards [were] fifty-three. And also [were taken] many men of Tlaxcalla, Texcoco, Chalco, and Xochimilco. Also [it is told] how they slew all in sacrifice there before those which were their gods ____ 99

Thirty-sixth Chapter, in which is told how the Spaniards for the first time came to and entered the market place here in Tlatilulco ____ 103

Thirty-seventh Chapter. Here is told how the Mexicans laboriously uncovered by night the waterways which the Spaniards had filled in by day ____ 105

Thirty-eighth Chapter, in which is told how the Spaniards set up a catapult with which they would by trickery slay the Tlatilulcans ____ 109

Thirty-ninth Chapter, in which is told how, when the [Spaniards] had forced them to the wall, there appeared to the Mexicans what showed itself to be [a ball of] jasper which seemed to issue from the heavens and came to view like a large coal of fire ____ 115

Fortieth Chapter. Here is told how the men of Tlatilulco and Tenochtitlan and their leaders yielded to the Spaniards, and what befell when they were among them ____ 117

Forty-first Chapter, in which are told the words with which Don Hernando Cortés addressed the rulers of all the cities, here in Mexico, in Texcoco, and in Tlacopan, when the shields had been stilled, and [how] he questioned them as to the gold which [the Spaniards] had in haste scattered there at the Tolteca canal, when they escaped and fled from Mexico ____ 121

LIST OF ILLUSTRATIONS

following page 44

Page from *Florentine Codex*, Book XII.

1. Landing of the Spaniards (title page).
2. Spaniards marching (foreword, *Al lector*).
3. Spaniards sounding a temple in Mexico (Chapter 1).
4. First omen: the tongue of fire (Chapter 1).
5. Second omen: burning of Temple of Uitzilopochtli (Chapter 1).
6. Third omen: burning of Temple of Xiuhtecutli (Chapter 1).
7. Fourth omen: comet in three parts (Chapter 1)
8. Sixth omen: the weeping woman (Chapter 1).
9. Seventh omen: the ashen bird with a mirror (Chapter 1).
10. Eighth omen: two-headed men (Chapter 1).
11. Stewards present Spaniards' gifts to Moctezuma (Chapter 2).
12. Moctezuma's messengers present gifts to Cortés (Chapter 5).
13. Spaniards bind Moctezuma's messengers (Chapter 5).
14. Spaniards fire guns and terrify the messengers (Chapter 5).
15. Spaniards give food to Moctezuma's messengers (Chapter 5).
16. Moctezuma's messengers return to the mainland (Chapter 6).
17. Captives are slain before Moctezuma's messengers (Chapter 6).
18. Spaniards in war array (Chapter 7).
19. Moctezuma hears description of the Spaniards (Chapter 7).
20. Moctezuma's messengers offer food to the Spaniards (Chapter 8).
21. Moctezuma and the Mexicans weep on hearing of the power of the Spaniards (Chapter 9).
22. Marina interprets for Cortés (Chapter 9).
23. Moctezuma debates whether to flee (Chapter 9).
24. Spaniards are welcomed in Tlaxcalla (Chapter 11).
25. Moctezuma's emissaries meet the Spaniards between Iztaccipoc and Popocatepetl (Chapter 12).

[p. xi]

26. Moctezuma's emissaries return to tell of the meeting with the Spaniards (Chapter 12).

27. Moctezuma's soothsayers meet the drunkard (Chapter 13).

28. Burning Mexican temples shown by the drunkard (Chapter 13).

29. The road to Tenochtitlan is sown with maguey plants (Chapter 14).

30. Spaniards receive the submission of two of the Four Lords (Chapter 14).

31-43. Spaniards on the march from Itztapalapan to Tenochtitlan (Chapter 15).

44. Marina interprets for the Spaniards when Moctezuma meets Cortés (Chapter 16).

45, 46. Spaniards take Moctezuma with them as they enter the great palace (Chapter 17).

47. Supplies demanded by the Spaniards (Chapter 17).

48. Moctezuma leads Cortés to the treasure (Chapter 17).

49, 50. Spaniards and allies loot the treasure house (Chapter 17.)

51. Marina addresses Mexican noblemen (Chapter 18).

52. Mexicans leave supplies for the Spaniards (Chapter 18).

53. Tribute left for the Spaniards (Chapter 18).

54. Alvarado asks to see the Feast of Uitzilopochtli (Chapter 19).

55, 56. Spaniards see preparations for the Feast of Uitzilopochtli (Chapter 19).

57-65. Preparation of the image of Uitzilopochtli (Chapter 19).

66-70. Massacre of participants in the Feast of Uitzilopochtli (Chapter 20).

71. The massacre is announced to the Mexicans (Chapter 20).

72, 73, 75. War breaks out between the Spaniards and the Mexicans (Chapter 21).

74. Moctezuma is put in irons (Chapter 21).

76. Itzquauhtzin addresses the Mexicans (Chapter 21).

77. Mexicans are seen carrying furs into the palace (Chapter 21).

78. Ornamental design from Book XII.

79-82. Cortés arrives in Tenochtitlan with more Spaniards and allies (Chapter 22).

83. Spaniards rout chieftains from the pyramid temple (Chapter 22).

84. Bodies of Moctezuma and Itzquauhtzin are cast out of the palace by the Spaniards (Chapter 23).

85. Moctezuma's body is carried away (Chapter 23).

86. Burning of Moctezuma's body (Chapter 23).

87. Itzquauhtzin's body is carried away (Chapter 23).

88. Burning of Itzquauhtzin's body (Chapter 23).

89. Spaniards set forth from their quarters in Tenochtitlan (Chapter 24).

90. Spaniards are detected leaving (Chapter 24).

91-93. Flight from Tenochtitlan (Chapter 24).

94. People of Teocalhueyacan comfort the Spaniards (Chapter 25).

95-97. Mexicans recover bodies and loot from the Tolteca canal (Chapter 25).

98. Massacre at Calacoayan (Chapter 25).

99. Spaniards climb up to Teocalhueyacan (Chapter 25).

100, 101. People of Teocalhueyacan welcome the Spaniards (Chapter 26).

102. Spaniards prepare to depart from Teocalhueyacan (Chapter 26).

103. Spaniards reach Tepoxotlan (Chapter 26).

104. Mexican warriors pursue the Spaniards (Chapter 26).

105. Spaniards reach Citlaltepec (Chapter 26).

106. Spaniards reach Xoloc (Chapter 26).

107. Spaniards reach Aztaquemecan (Chapter 26).

108. Mexicans on mountain-top watch for the departure of the Spaniards (Chapter 27).

109, 110. Battle at Mt. Tonan (Chapter 27).

111. Burning of bodies of Mexicans slain in battle at Mt. Tonan (Chapter 27).

112, 113. Refurbishing of a temple in Tenochtitlan on the departure of the Spaniards (Chapter 28).

114. Smallpox plague (Chapter 29).

115-117. Return of the Spaniards to attack Tenochtitlan (Chapter 29).

118. Spanish brigantines (Chapter 30).

119. Spaniards attack Çoquiapan (Chapter 30).

120. Spaniards crumble the wall at Xolloco (Chapter 30).

000

121. Fighting at Xolloco (Chapter 30).

122. Spaniards pierce the wall at Uitzillan (Chapter 31).

123. Allies of the Spaniards fill the canals (Chapter 31).

124. Spanish horsemen ride in at Uitzillan (Chapter 31).

125. Spanish horseman spears a Tlatilulcan (Chapter 31).

126. Mexican warriors unhorse and kill the Spaniard (Chapter 31).

127. Shorn ones land from warboats (Chapter 31).

128. Spaniards are attacked on both sides (Chapter 31).

129. Mexican warriors toss the captured cannon into the water at Tetamaçolco (Chapter 31).

130. Mexicans flee from Tenochtitlan (Chapter 32).

131. Exploits of Tzilacatzin (Chapter 32).

132-134. Battle about Ayauhcahtitlan and Nonoalco (Chapter 32).

135-137. The warrior Tzilacatzin in three disguises (Chapter 32).

138, 139. Spaniards are fought off and withdraw (Chapter 32).

140. Warriors of Xochimilco, Itztapalapan, and Cuitlauac arrive to work treachery upon the Mexicans (Chapter 33).

141. Quauhtemoc and a nobleman (Chapter 33).

142-145. The treachery of those of Xochimilco, Itztapalapan, and Cuitlauac is prevented (Chapter 33).

146. Quauhtemoc and Mayeuatzin punish the traitors (Chapter 33).

147, 148. Spaniards arrive at Yauhtenco (Chapters 33, 34).

149-151. Mexicans disperse the Spaniards and capture some (Chapter 34).

152-157. Mexicans capture and sacrifice fifty-three Spaniards, some horses, and many allies (Chapter 35).

158. Spaniards enter the market place at Tlatilulco (Chapter 36).

159. Spaniards fire the temple at Tlatilulco (Chapter 36).

160, 161. Battle in the market place at Tlatilulco (Chapter 36).

Note.—Although spaces were provided, illustrations are lacking in the last five chapters of Book XII. The eight figures reproduced following Plate 161 are some of the many ornamental designs found in this Book.

De la Conquista Mexicana

TWELFTH BOOK, WHICH TELLETH HOW WAR WAS WAGED HERE IN THE CITY OF MEXICO.[1]

INJC MATLACTETL OMUME AMOXTLI, ITECHPA TLATOA IN QUENJN MUCHIUH IAUIOTL IN NJCAN IPAN ALTEPETL MEXICO.

787 **First Chapter.** Here are told the signs which appeared and were seen, when the Spaniards had not yet come here to this land, when they were not yet known to the natives here.[2]

When the Spaniards had not arrived, by ten years,[3] an omen first appeared in the heavens. It was like a tongue of fire, like a flame, as if showering the light of the dawn. It looked as if it were piercing the heavens. [It was] wide at the base and pointed [at the head]. To the very midst of the sky, to the very heart of the heavens it extended; to the very midpoint of the skies stood stretched that which was seen off to the east. When it arose and thus came forth, when it appeared at midnight, it looked as if day had dawned. When day broke, later, the sun destroyed it when he arose. For a full year [the sign] came forth. (It was [in the year] Twelve House that it began.) And when it appeared, there was shouting; all cried out striking the palm of the hand against the mouth. All were frightened and waited with dread.

Injc ce capitulo vncẽ mjtoa in nez, in mortac in machiotl yoã in tetzavitl, in aiamo valhuj españoles, in njcan tlalli ipan in aiamo no iximachoa in njcẽ chaneque.

In aiamo vallaci españoles, oc matlaczivitl, centlamãtli tetzavitl achto nez, ilhujcatitech iuhquj in tlemjiaostl, iuhquj in tlecueçalutl, iuhqujn tlavizcalli, pipixauhticaca injc necia, iuhq'n ilhujcatl quiçoticac: tzimpatlaoac, quapitzaoac: vel inepantla in ilhujcatl; vel yiollo in aciticac ilhujcatl, vel ilhujcaiollotitech aciticac, in iuh itioia vmpa tlapcopa: in oalmoquetzaia, oiuh onquiz ioalnepantla in necia tlatviliaia, ipan tlatvia, q'n ichoatl quiçoalpoloaia in tonatiuh, in jquac oalquiçaia: vel oc zivitl in oalmoquetzaia (ipan matlactli omume calli in peuh). 1. Book XII, as well as the other eleven, Sahagún says, was written in Tlatelolco. See Carlos Ma. de Bustamante (ed.): *La aparición de Nuestra Señora de Guadalupe de México, comprobada con la refutación del argumento negativo que presenta D. Juan Bautista Muñoz, fundándose en el testimonio del P. Fr. Bernardino Sahagún* (México: Ignacio Cumplido, 1840). The Tlatelolcan point of view is especially evident in this account. Cf. esp. p. 1. For a full history of the writing of the *Historia general*, however, see Wigberto Jiménez Moreno: *Fray Bernardino de Sahagún y su obra* (México: Editorial Pedro Robredo, 1938), and Angel María Garibay: *Historia de la literatura náhuatl* (México: Editorial Porrúa, 1954), passim, and II, pp. 246 sqq.

The translators regard this history of the Conquest as an Aztec account. Hence there is no attempt to compare it with histories by contemporary Spanish authors, or with other sources, except to clarify the Nahuatl text. The student of the history of the Conquest will find such sources as Cortés' letters, Bernal Díaz, Cervantes de Salazar, Aguilar, and others, necessary for the complete narrative.

2. See also Arthur J. O. Anderson and Charles E. Dibble: *Florentine Codex*, Book VIII — Kings and Lords (Santa Fe: School of American Research, Monograph 14, Part III, and University of Utah, 1954), Chapter VI.

3. Two years, in Bustamante, op. cit., p. 9. Edward Seler, in *Einige Kapitel aus dem Geschichtswerk des Fray Bernardino de Sahagun über Astronomie, Astrologie und Kalender* (Gesellschaft für Erdkunde, Walter Lehmann, und Walter Krickeberg, eds.; Stuttgart: Strecker und Schwarzlose, 1927), p. 483, n. 1, under *D. h. zwei Jahre vor der Ankunft der Spanier* (sic; Bustamante *A.D. 1517*) *Die Angabe ebenso, dass diese Lichterscheinung zwei Jahre vor der Ankunft der Spanier gesehen worden sei, stimmt also nicht zu der Angabe hier.*

787 A second omen came to pass here in Mexico: quite of its own accord fire broke out in the house of the demon Uitzilopochtli, and flared greatly. No one had set fire to it; only of itself it burst into flames. It was called Itepeyoc,[4] at the place named Tlacatecca. When [the fire] appeared, already the [335] squared, wooden pillars were flaring; from within them[5] emerged the flames, the tongues of fire, the blaze [which] speedily ate all the house beams. Thereupon there was an outcry; [the priests] said: "O Mexicans, hasten here to put out [the fire! [415] Bring] your earthen water jars!" And when they cast water upon it, when they sought to smother it, all the more did it flare. It could not be put out; it all burned.

Injc vnetl tetzavitl muchiuh, njcan mexico: çan monomavi in tlatlac, cuetlan, aiac ma qujtecavi, çan monoma tlecavi in jcal diablo vitzilobuchtli: mjtoaia, itcioc itocaiocan Tlacatecca: in nex ic tlatla in tlaquetzalli, in jtec, oalquijca in tlemjiaoatl; in tlenenepilli, in tlecueçalutl, cenca çan iciuhca conpalo in ixquijch calquavitl: njman ic ic tlacaoaca, qujtoa. Mexicae ma vallatotoca, tla cevilos, amaapilol: auh in jquac caatelijujaia, in qujcevizneçuja, çan ic illujce moçitza, aocmo vel ceuh, vel tlatlac.

[346] A third omen: a temple was struck by a thunder bolt. It was only a straw hut, a place called Tzonmulco, Temple of Xiuhtecutli. It was raining not heavily; it only sprinkled, so that it was considered a bad omen. For, it was said, there was a mere[6] summer flash; nor did thunder sound.

Injc etetl tetzavitl: vitecoc ipan tlatlatzin teucalli, çan xacalli catca, itocaiocan tzõmulco: itcupan in xiuhtecutli, amo tilaoaia, çan aoachqujavia in juh tetzammachoc: iuh mjtoa in ça çan tonalhujtecoc, amono caqujztic in tlatlatzinjliztli.

A fourth omen: there was yet sun when a comet fell. It became three parts. It departed from where the sun set and traveled toward where he came forth. As if sprinkling live coals, [so] its tail went extended a great distance. Far did its tail reach. And when it was seen, great was the uproar; like [the din of] shell rattles [the outcry] was overspread.[7]

A fifth omen: the water [of the lake] foamed up. No wind stirred it up. It was as if the water swirled, as if it boiled up with a cracking sound. Very far [731] did it go, as it rose upward. And it reached the bases of the houses, and flooded them, and crumbled the houses.[8] This was the great lake which stretcheth about us here in Mexico.[9]

4. Probably Itepeyoc is meant for *Iniac*. See Chapter 19 of this Book; also *Memoriale en 3 columnas*, in Francisco del Paso y Troncoso: *Fr. Bernardino de Sahagún — Historia de las cosas de Nueva España* (Madrid: Hauser y Menet, 1905), VII, p. 93; Fr. Bernardino de Sahagún: *Historia General de las cosas de Nueva España* (México: Editorial Pedro Robredo, 1938) I, pp. 215, 229; and Anderson and Dibble, op. cit., II — *The Ceremonies*, p. 161.

5. Book VIII of the *Florentine Codex* has this in a similar passage. In the *Real Palacio* MS it reads: *yuhc ꝟ ualquiça.*

6. *Ce* *pan* appears in *loc. cit.*

7. Cf. Anderson and Dibble, op. cit., Book VIII — Kings and Lords, p. 18, n. 5.

8. In the *Real Palacio* MS, this passage reads: *"auh ꝟ calli xiuitinoloa ynpic ꝟ auh ynꝟ ꝟpapachiuh ynpol xixitin."*

9. In *loc. cit.*, manj is followed by *"ꝟ auh yuic ocoonnp yuic ocoonnd ꝟ ca ynpa ya ꝟ ynpa ouaxiu ꝟ ony ꝟqiça."*

beloved sons, now we are about to go!"[10] Sometimes she said: "O my beloved sons, whither shall I take you?"

A seventh omen: at one time the fisher folk who hunted or snared with nets took captive an ashen hued bird like a crane. Then they went to show it to Moctezuma, [who was] in the Tillan calmecatl.[11] It was past noon, and still daytime. On its head was as it were a mirror, round, circular, and as if pierced in the middle,[12] where were to be seen the heavens, the stars—the Fire Drill [constellation]. And Moctezuma took it as an omen of great evil when he saw the stars and the Fire Drill. And when he looked at the bird's head a second time, a little beyond[13] [the stars] he saw people who came as though massed, who came as conquerors, girt in war array. Deer bore them upon their backs. And then he summoned the soothsayers and the sages.[14] He said to them: "Do you not know what I have seen there, which was as if people came massed?" And when they would answer him, that which they looked at vanished. They could tell [him] nothing more.[15]

An eighth omen: often were discovered men of monstrous form, having two heads [but] only one body. They took them there to the Tillan calmecatl, where Moctezuma beheld them; but when he looked at them, they then vanished.

11. In Bustamante, *op. cit.*, p. 10, this is explained: "*In Moctezuma á presencia de Moctezuma, el cual por entonces estaba en unos palacios que se llamaban Tillancalmecatl (quiere decir, palacios negros de negro) y parece que como tenia otros palacios para diversos, llamaban á aquellos, este Tillancalmecatl tenia para recrearse en el tiempo de adversidad y pristeza.*"

12. A *chichiltzi* (instrument for sewing), emblem of Tezcatlipoca and the fire god (Seler, *op. cit.*, p. 455, n. 4).

13. In the *Real Palacio* MS, a similar phrase is written: "*Iuc q'mitlar, yqlq'n acame ocquequeztivitze.*" On *ocquequeztivitze*, see Rémi Siméon: *Dictionnaire de la langue nahuatl ou mexicaine* (Paris: Imprimerie Nationale, 1885) — *quequeztia*. In corresponding Spanish passages, Sahagún translates as "*muchedumbre de gente junta*" or "*mucha gente junta*."

14. *Tlamatinque*: see Angel María Garibay K.: "Pseudónimos de Sahagún," *Tlalocan*, II, 2 (1946), p. 171. *Amatlque* is favored as translation: "*Los sabios*, *personas dotadas grandemente maravillosas.*"

15. In the *Real Palacio* MS, following equivalent, we read: "*ioc ie ual q'mjqõ. ie ceppa q'mitlaui ij tlacatlaque in domatinime, ie yuan ueuel quitlaqui ueue ual yuhcaui yn quenmanjan.*" (In the original, the *chiuhcuitlac* for *-que* resembles *-qui*; hence it is thus reproduced here.)

[p. 4 is blank]

648 **Second Chapter, in which it is told how those arrived who first came by boat, which, they say, was only one boat.**

And when were seen those who had reached the shore of the ocean, traveling by boat, then in person went Pinotl, the high steward of Cuetlaxtlan. He took with him other stewards [The second was] the steward of Mictlanquauhtla, Yaotzin. The third was the steward of Teociniocan, named Teociniacatl. The fourth was Cuitlālpitoc, who was only an underling[1] and a leader. The fifth was Tentlil,[2] likewise a leader.

Only these went to look at [the Spaniards]. They
[643 proceeded as if to sell [goods]; hence they went in
29a disguise, to find out about them. They went to offer them precious mantles, richly made, [which] could be only Moctezuma's mantles. No one else might wear them; they were his alone—his very own.

By boat they went in order to see them. As they did so, Pinotl said: "Let us not deceive the lord Moctezuma; for no longer would [we] live.[3] Let us indeed go, lest we die, in order that he may learn
643] the truth." ([For] Moctezuma[4] was his name as a prince, and Tlacatecutli [lord of men] was his title as ruler.)

Thereupon they went into the water. They entered the boats and followed the water['s current]. The water folk rowed them.

And when they had drawn near, where they could see the Spaniards, then, in their presence, [as if]
576] kissing the earth,[5] [they kissed] the prows of the boats. For they thought that Quetzalcoatl Topiltzin had come.

The Spaniards called to them. They said to them: "Who are you? Whence have you come? Where is your home?"

2. Fernando de Alva Ixtlilxochitl, in *Obras históricas relación de la venida de los españoles y principio de la ley evangélica* (México: Editorial Pedro Robredo, 1938), p. 5, translates Tentlil, or Tzoltelile, *gobernador de Moctheuzoma, que era de Cuauhtlan, o Cuauhtlan*," who brought the news to the ruler when Cortés later (1519) landed.

3. *Amoxcac* (you live): possibly *ximoxac* (we live) is intended.

4. Motecuçomatzin: reverential form of well-known Nahuatl name is generally not expressed in our translation, unless demanded by the context. With others we usually follow the Nahuatl text.

5. Cf. Anderson and Dibble, *op. cit.*, II—*The Conquest*, p. 182. Bolton, *op. cit.*, p. 457, translates the phrase thus: "*were the Indians were on Knees.*"

648 Then [the others] said: "We have come from Mexico."

[The Spaniards] answered them: "If in truth you are Mexicans, what is the name of the ruler of Mexico?"

They replied: "O our Lords, his name is Moctezuma."

431 Therefore they offered them all the various things
643 which they bore with them; costly capes such as
292 those which here are named: [the mantle] with the
648 sun design, the blue-knotted one, the one with the jar design, the one with eagle down, the one with the serpent mask, the one with the wind jewel, the one with turkey blood design, or the one with the whirlpool design, or the one with the smoking mirror.

648 When they had presented them all these various [capes, the Spaniards] gave them gifts in return. They offered them green and yellow necklaces,[6] which looked like amber.

And when they had taken [the gift], when they had seen it, much did they marvel.

And [the Spaniards] addressed them; they said to them: "Go [in peace]! First of all we go to Castile. We shall not tarry in proceeding to arrive in Mexico."

Thereupon [the Spaniards] departed. Thereupon also [the others] went; they turned back.

484 And when they had disembarked on dry land, then they went forthwith to Mexico. Day by day and night by night[7] they traveled, in order to come and notify Moctezuma, and be first[8] to arrive telling him the truth, and to inform him. They went carrying their goods, which they had received.

500 And upon this they declared to him: "O our Lord, my noble youth, mayest thou destroy us! For behold, this we have seen; behold, this we have done, there where thy grandfathers stand guard for thee, before the ocean. We went to see our lords the gods, in the midst of the water. All thy mantles we went to give them. And behold, they gave us of their noble goods. They said: 'If in truth ye have come from Mexico, behold, this ye shall give the ruler Moctezuma. Thus will he know us.'"

1. Cf. Sahagún (Robredo ed.), II, p. 330; also James Cooper Clark: *Codex Mendoza* (London: Waterlow & Sons, 1938), Vol. I, p. 56. For some idea, like vitznauatlailotlac, a satisfactory English equivalent is difficult to suggest.

2. Cf. Soler, op. cit., p. 488; also corresponding Spanish text: "*pagarle en los que tienen cargo de guardar la tesorera.*"

3. Bolero error, in the Aztec text, probably centtetl should be read.

4. Arrival of Cortés in 1519.

5. In Angel Maria Garibay K.: *Llave del Náhuatl* (Otumba: [Impresos Mejía], 1949), p. 188, the passage "*Ca yuh catca in iyollo in xan huallaz, in xan quiçaquiuh quitlamamacatia in ipetl in icpal*" is thus translated: "*Así fue su determinación, que habría de venir, habría de regresar, habría de tocar o en tierra y estrada.*"

773 verily he traveled there [to the east] when he went.
And [Moctezuma] sent five to go to receive him and
648 to offer him gifts. The leader was Teuoa [such
565 was] his lordly name; his name as a nobleman was
Yoalli ichan. The second was [the steward of] To-
postlan; the third, of Tiçatlan; the fourth, of Ueue-
tlan; the fifth, of Ueicamecatlan.[6]

Teuoa, in jtecutoca, in jpiltoca Joalli ichan. Injc vme Tepuztecatl. Injc ei, tiçaoa. Inic navi vevetecatl. Injc macujlli Veicamecatl heca.

6. Cf. Bibl., loc. cit., where these two gloss as one from seven. Tlaxomulco here is transposed to Ueicamecatlan.

Fourth Chapter. Here is told what Moctezuma then commanded[1] when he knew that the Spaniards had come back: the second time [that] they came, [they did so under] Don Hernando Cortés.

He said to them: "Come, O ye intrepid warriors; come! It is said that our lord hath at last arrived. Receive him. Listen sharply; lend your ears well to what he will say. You will bring back what is well heard. Behold wherewith you will arrive [before] our lord."

[First was] the array of Quetzalcoatl:[2] a serpent mask made of turquoise [mosaic];[3] a quetzal feather head fan;[4] a plaited neckband of precious green stone beads, in the midst of which lay a golden disc;[5] and a shield with [bands of] gold crossing each other,[6] or with [bands of] gold crossing [other bands of] sea shells, [with] spread quetzal feathers about the [lower] edge and with a quetzal feather flag; and a mirror upon the small of the back,[7] with quetzal feathers, and this mirror for the small of the back [was] like a turquoise shield, of turquoise mosaic — encrusted with turquoise, glued with turquoise; and green stone neck bands, on which were golden shells; and then the turquoise spear thrower, which had on it only turquoise with a sort of serpent's head; it had the head of a serpent;[8] and obsidian sandals.

7. *Ibid.: "una medalla grande hecha de obra de mosaico que la llenaua atada y cetijda sobre las lomas."*

8. *Ibid.: "un cuero como cuero de chiapo todo labrado de obra de mosaico de turquesas y la boeba de orilla era una cabeça de una culebra colorada o amarilla."*

-11-

431 The second [gift] which they went offering him
776 was the array of Tezcatlipoca — the headpiece of
292 feathers, with stars of gold;[9] and his golden shell
301 earplugs;[10] and a necklace of sea shells; and the
breast ornament decorated and fringed with small
shells; and the sleeveless jacket painted with a design, with eyelets on its border, and fringed with feathers;[11] and a mantle with blue knots, which was called *tzitzilli*, grasped by the corners in order
[416] to tie it across the back;[12] also, over it, a [mosaic] mirror[13] lying on the small of the back; and, [as] another thing, golden shells bound on the calves of the legs; and one [more] thing, white sandals.

Injc vntlamantli qujmacato, iehoatl in jtlatquj catca Tezcatlipuca: hivitzoncalli, coztic teucujtlatoca cicitlallo, yoan iecujtlacoiolnacoch: yoan chipolcozcatl; elpan concatl, cilin ic tlatlatlamachilli, ic tenchaisoac; yoan xicolli, çan tlacujlolli, in jtenjxio, hivitica tenpoçonquj: yoan centeti tilmatli, xiuhtlalpilli, motocaiotiaia, tzitzilli, qujoalnacazvitzana injc mocujtlalpia; no ipan mantiuh tezcacujtlapilli: yoã oc no centlamãtli, teucujtlacoiolli, itlanjtzco molpiaia, yoã centlamantli, iztac cactli.

Third was the adornment of the lord of Tlalocan:
[237] the headdress of quetzal and heron feathers, replete with quetzal feathers. It had quetzal feathers and was blue-green; blue-green was overspread. And over it gold interspersed with shells. And green stone [were] his serpent-shaped ear plugs.[14] [There were] his sleeveless jacket, with a design of green
[416] stone; his neck ornament, his plaited, green stone neck band with also a golden disc. Also he had a mirror at the small of his back, as hath been told; and likewise he had rattles and a cape with red rings on the border,[15] which was tied on; and shells of gold for his ankles; and his serpent staff was made of turquoise.

14. *Ibid.*: "*unos orejeras de chalchiuijl, arriba que venia dellos unos calabrinos de chalchiujes.*"

15. *Tzitzilli* is probably meant in the Aztec colours.

16. Corresponding Spanish text: *una mujera de cuero de tigre, y colaquqaqui [sic] de la mujera, sobre las espaldas, una capilla grande, hecha de plumas de cuerno, llamaban la mujera un chalchiujil grande, y redondo, en la punta.*"

17. *Ibid.*: "*de mesquite de turquesas.*"

12
½ [There is no known genus of pheasant native to the New World. Perhaps the term is here used colloquially. — Analyst]

golden shells used upon his ankles; and a shield with a golden disc in the center, and spread quetzal feathers along its [lower] rim, and also with a quetzal feather banner.[18] [He had] the curved staff of the wind god, hooked at the top,[19] and white precious stone stars[20] spread over it; and his foam sandals.

Behold, these [were] all the things called the array of the gods, which became the charge of the messengers, and yet many more things which they bore as their greeting gifts — the shell-shaped headpiece of gold, with pendant parrot feathers;[21] the golden conical cap,[22] etc.

Thereupon were baskets filled; wooden frames for carrying burdens on the back were loaded. And the five [messengers] named, Moctezuma then commanded; he said unto them: "Go! Linger nowhere! Pray to our lord the god; say unto him: 'Thy servant Moctezuma hath sent us; behold what he offereth you, for [the god] hath come to reach his wretched home in Mexico.'"

And when they had gone to reach the coast, they ferried them across, they took them by boat across to Xicalanco. Then once again they departed from there by boat; the water folk took them. Everything was placed and heaped in the boat; they filled the boat with the goods. And when the boat was filled, thereupon they departed. They betook themselves into the water and left to reach the boats [of the Spaniards], they approached their boats.

Then [the Spaniards] inquired of them: "Who are you? Whence came you?"

Then [the messengers] answered them: "We have come from Mexico."

Again [the Spaniards] said to them: "Perhaps not. Perchance you only claim to come from there. Perhaps you only pretend. Maybe you make sport of us."

But when they had verified it, when they had quieted their doubts, then they hooked the prow of the boat with an iron pole, and thus drew them near. Then also they let down a ladder.

18. *Ibid.*: "*la qual rodela estaua bordada con plumas ricas en la haza de la rodella [sic] salia vna manda de plumas ricas.*"

19. *Ibid.*: "*un bastón labrado de esmeraldas y en la bastón de arriba pusieron unas plumas ricas o pedas resplandecientes en la alto de arriba.*"

20. Literally, white green stone. The term *chalchiuitl*, often translated "jade" or "jadeite," may well have included various kinds of stones. Mexico, our translation has adopted the term "green stone."

21. *Ibid.*: "*una cofia de oro hecha a manera de corona mariana al cual respondian de plumas ricas que colgauan hasta las espaldas.*"

22. Corresponding Spanish text: "*una cofia Rana.*"

[p. 14 is blank]

648 **Fifth Chapter.** Here is related what came to pass when the messengers of Moctezuma went aboard the boat of Don Hernando Cortés.

Thereupon they climbed up. They bore in their [576] arms the array [of the gods]. When they had proceeded to go up into the boat, each in his turn disposed himself to kiss the earth before the Captain. Having done so, they besought and said unto him:

"Let the god deign to hear: for his vassal, Moctezuma, who guardeth over Mexico for him, prayeth to him. For [so] he speaketh: 'The god hath suffered, he is weary [from travel].'"

Upon this, they adorned the Captain himself; they put on him the turquoise mosaic serpent mask; with it went the quetzal feather head fan; and with it went — in it they had set and with it went hanging — the green stone ear plugs in the form of serpents. And they clad him in the sleeveless jacket; they put the sleeveless jacket upon him. And they put the necklace upon him: the plaited green stone neck band in the midst of which lay the golden disc. With this they bound, on the small of his back, the mirror for the small of the back. Also with it they laid upon his back the cape named *tzitzilli*. And about [the calf of] his leg they placed the green stone band with the golden shells.[1] And they gave him, and placed upon his arm,[2] the shield with lines of gold and shells crossing, on whose [lower] rim went spread quetzal feathers and a quetzal feather flag. And before him they set the obsidian sandals.

And the other three sets of adornment, the array of the gods, they only laid in rows and placed in order before him.

And when this had been done, the Captain said to them: "Are these perchance all your gifts, your greetings?"

They answered: "This is all with which we came, O our lord."

Then the Captain commanded that they be bound. They fastened irons about their ankles and necks.

1. Described earlier as a white ornament.
2. The left arm, in the corresponding Spanish text.

648 This done, then they shot the great lombard gun. And the messengers then, verily, fainted and swooned. One by one, they fell to the deck; swaying, they went down, and knew no more. And the Spaniards lifted and raised them up so that they sat, and made them drink wine. Thereupon they served them food and made them eat, that they might catch their breath and revive.

And when this had come to pass, then the Captain said to them: "Hearken: I have known and heard it said that these Mexicans are very strong, exceeding brave, and great victors. Supposedly, one Mexican can pursue, overpower, conquer, and rout even ten, even twenty of his foes. And now I would satisfy my doubts. I would behold and test how strong and powerful you are."

Then he gave them leather shields, and iron swords, and iron lances.

"And this, early in the morning, at dawn, will come to pass: we shall fight and join the fray among ourselves, and try our strength among ourselves, [to see] who will fall."

They answered the Captain and said to him: "Let the lord hear: his vassal Moctezuma hath not thus commanded us [to act]. We have come to do only this one thing—to greet and salute [our lord]. It is not our charge [to do] what the lord requireth. For if we do so, Moctezuma would therefor be wroth, and might destroy us for it."[3]

Then the Captain said: "Nay, for it must be [as I say]. I wish to see and marvel [at your prowess]. For this is known in Castile; it is told that you are very powerful and valiant. Early in the morning shall ye eat. I also shall eat. [Then] verily shall you gird yourselves [for combat]."

Sixth Chapter. Here is told how the messengers of Moctezuma returned here to Mexico and came to relate to Moctezuma that which they had seen.

Thereupon [Cortés] dismissed them, and let them descend to their boats. And when they had climbed down into the boats, they rowed with great force. Mightily did they ply their oars. Some paddled with their hands.

Plying with all their force, they came saying to one another: "O warriors, [use] all your strength! Row with haste, lest something here overtake us—lest something here befall us!"

Speedily they hastened to reach by water the place called Xicalanco; there they no more than quickly caught their breath, that once again they might with energy hasten on. Then they came to reach Tecpan tlayacac, whereupon they also hastened and hurried on, and soon came to reach Cuetlaxtlan. [From there] they likewise departed in haste, [having] in this place taken some rest.

And [those] of Cuetlaxtlan said to them: "Rest yet but a brief day; catch your breath!"

But they replied to them: "Nay, we may only go on suddly. We must give the news to the lord, the ruler Moctezuma. We must tell him what we have seen, which is terrifying—the like of which hath never been seen. Had you, perchance, already, ere now, heard of it?"

Then they speedily departed from there and soon came to reach Mexico. It was deep night when they went reaching [the city]; they came in here quite by night.

And when this was happening, [Moctezuma] could enjoy no sleep, no good. Never could one speak to him. That which he did [was] only as if it were in vain. Oftimes he sighed; he was spent, downcast. He felt delight in no savory morsel, joy, or pleasure.

Wherefore he said: "What will now become of us? Who, forsooth, standeth [in command]? Alas, until now, I. In great torment is my heart, as if run through with chili water, so that it burneth and

000 smareth. Where, in truth, [may we turn], O our lord?"

Then [the messengers] commanded those who watched; they said to those at the head of the guard: "Even though he sleepeth, tell him: 'Lo, they whom thou hast sent over the water have come!'"

And when they went to tell him, then he replied: "I shall not hear it here; I shall hear it in the Coa-
727 calli. There let them go." And he commanded and
782 said: "Let two captives be covered with chalk."
[202] And then the messengers went to the Coatalli,[1] and also the noble Moctezuma himself.

Thereupon, before them, were slain the captives; they slashed open their breasts; they sprinkled the messengers with their blood. For this reason did they so do: that they had traveled into very perilous places; that they had gone to see — had looked into the faces and at the heads of, and had verily spoken to — the gods.

1. Cf. Anderson and Dibble, op. cit., VIII — *Kings and Lords*, p. 44.

Seventh Chapter, in which is related the account by which the messengers informed Moctezuma of the host which they had gone to see.

And after this, they then informed Moctezuma; they told him how they had gone in astonishment; and they showed him what their food was like.

And when he had heard how the messengers reported, he was exceeding fearful and terror-struck. And much did he marvel at their food.

Yet more was he frightened when he heard how [the shot] discharged, at [the Spaniards'] command, from the gun; how it resounded like thunder when it went off. Indeed, it overpowered one; it deafened our ears. And when it discharged, something like a round pellet came forth from within. Fire went scattered forth; sparks showered forth. And its smoke smelled very foul; it had a fetid odor which, verily, wounded the head. And when [the pellet] struck [a] mountain, [it was] as if it fell apart and crumbled. And when it struck a tree, it splintered, seeming to vanish as if someone blew it away.

All iron was their war array. They clothed themselves in iron. They covered their heads with iron. Iron were their swords. Iron were their crossbows. Iron were their shields. Iron were their lances.

And their deer, which bore them upon their backs, were as high as roof-tops.

And they covered all parts of their bodies. Alone to be seen were their faces — very white. They had eyes like chalk;[1] they had yellow hair, although the hair of some was black. Long were their beards, and also yellow; they were yellow-bearded. [The hair of the Negroes] was kinky and curly.

And their food was like lords' food[2] — very large, and white; not heavy like [tortillas, but] like the stalks of maize plants — as if of ground maize stalks; it tasted a little sweet, a little honeyed — it tasted honeyed,[3] it tasted sweet.

And their dogs were very large. They had ears doubled over; great, hanging jowls; blazing eyes —

Eighth Chapter, in which is told how Moctezuma sent the magicians,[1] wizards,[2] and soothsayers[3] so that they might do something to the Spaniards.

Then Moctezuma sent emissaries. He dispatched various evil men — soothsayers and magicians. And he sent the constables, hardy [warriors], chieftains, to purvey [to the Spaniards] all they might need of food: turkeys, eggs, white tortillas, and all they might ask for as well as whatsoever might satisfy their hearts' desire. They were to watch them well. He sent captives, so that they might be prepared if perchance [the Spaniards] would drink their blood. And just so did the messengers do.

And when [the Spaniards] beheld this, their stomachs turned. They spat; they blinked; they shut their eyes and shook their heads. For the food, which they had sprinkled and spattered with blood, sickened and revolted them. For strongly did it reek of blood.

And thus had Moctezuma provided, for he thought them gods; he took them for gods; he paid them reverence as gods. For they were called and named "gods come from the heavens." And the black ones were said to be black gods.

Later they ate white tortillas, grains of maize, eggs, turkeys, and all manner of fruit — sapotas,[4] red sapotas,[5] yellow sapotas,[6] black sapotas,[7] sweet pota-

1. Godbey, in "Parallelismo en Sahagún," *Tlalocan*, II, 2 (1946), p. 170, refers to the "'duplicación de la persona' o al 'desdoblamiento'" in regard to nanaoalti. The term may be related etymologically to nana (4) — a quadruple personality, an outlook verb nanaoli, nanaoa (to feel or dissemble, as in magic tricks), or Maya-Quiché na, nan, nana (wisdom, science, magic). Godbey favors the second possibility (nanaoli, nanaoa).

2. *Tlachiaxtenoc*: concerning the term *chiaxtenoloaia*, Godbey refers to *un arte de hombre paralelismo*, and quotes Sahagún's phrase in Vol. III (Rubredo ed.), p. 10 — "*tiene puesto ojos al desvanido*" (*desvanecido*) (*ibid.*, p. 174). In *op. cit.*, *Tlalocan*, I, 4 (1944), p. 308, he refers to *desvanecido* as "*loco*," "*mago*," "*hombre que perpetua a la gente, hombre paralelismo*"; "*prestigiador y prometedor de conocer.*" There is a discussion of the etymology of the term.

3. *Tlacatecpati*: we have previously noted the term "soothsayer." In *op. cit.*, *Tlalocan*, II, 2 (1946), Godbey, noting that Molina translates the term as astrologo, states: "*La rama culta, parecer detentor fundamental astrosacerdotal*," and notes the relationship of the term to *tecuhtlacatecpati*, one who prevents bad from falling. He cites *Le publicidée del culto de Tezcatlipoca*, II, p. 404.

4. *Quauhtzapotl*: sapota (*Lucuma chrysophylla* Mill.) in Francisco Hernández: *Historia de las plantas de Nueva España* (México: Instituto Universitario, 1946), I, p. 274; sapote or zapotl (generic name), according to Francisco J. Santamarina: *Diccionario general de americanismos* (México: Editorial Pedro Robredo, 1942), III, p. 314 — *Lucuma mammosa*, *L. hemipteroides*, *Achras mammosa*, *A. sapota*. Cf. also Sahagún (Rubredo ed.), III, p. 225.

5. *Tzapotzapotl*: sapotzapotl (*Lucuma mammosa* Gaertn.), sapotzinzoloa (Santamarina, *op. cit.*, pp. 314-316). In Bernardino de Sahagún: *Historia general de las cosas de la Nueva-España* (D. Joaquín and Manuel Rávalos, eds.; Pedro Cl. Moreno, 1829), p. 733, n. 2, this explanation appears: "*Los primitivos Españoles d'América confundieron* [with various sapotas] *la fruta homonimo pero gran de tzapotzapotl en Lucuma mammosa, de la familia dos sapota, qu'le apellidan ordinarl'ind mamey. C'est probablement la même fruit que los Antiques conocieron como le nom de mamapotl.*" See also Sahagún (Rubredo ed.), III, p. 225.

6. *Atzapotl*: probably the same as atzapotl. In Hernández, *op. cit.*, I, pp. 267-268, this is *Lucuma salicifolia* Kunth. It is also identified by Santamarina, *loc. cit.*, as *Lucuma salicifolia* — *canela trapotl* or *sapotillo*. In Sahagún (Rubredo ed.), III, p. 224, it is identified as *sapote amarillo* — *fruta gordo grugil* (*rodiner*). The *atzapotl* (yellow sapota) is now generally known as *sapote borracho* (*pouteria mammosa*, *Bolivar Gaceta Ornamental*).

7. *Tlacotzapotl*: *sapote prieto* (*Diospyros ebenaster* Retz — *ebenaceae*), in Sahagún, *loc. cit.*

754 And it is told why Moctezuma sent magicians and
648 soothsayers — that they might behold what kind [of men] they were, and that perchance they might bewitch and cast a spell over them. Perhaps they might blow them away, or enchant them. Mayhap they might cast something at them, or they might, with some words of the Evil One, utter an incantation over them, so that they might sicken and die, or else because of it turn back.

But these, when they performed their charge and commission upon the Spaniards, were at once powerless. Nothing could they do.

Then they quickly returned and came to tell Moctezuma what they were like and how strong they were: "We cannot contend against them; we are as nothing."

Then Moctezuma commanded sternly, charged, enjoined, and ordered on pain of death, that the stewards and all the noblemen and constables should see to it that [the Spaniards] be cared for in all that they might need.

And when [the Spaniards] had crossed over to the land, when finally they came, when already they moved, proceeded, and marched ahead, they were well cared for; they were honored. They passed from hand to hand as they took their way. Much was done for them.

[p. 24 is blank]

200 **Ninth Chapter.** Here it is told how Moctezuma wept; and the Mexicans wept when they learned that the Spaniards were very powerful.

And Moctezuma became very fearful; he felt foreboding and was frightened and terrified, and foresaw evil for the city.

And everyone was sore afraid. There were fear, terror, dread, and apprehension. There were discussion, the forming of single groups, and hastening by. All wept — wept much; they shed tears for the people. They went with heads hanging and countenances fallen. All greeted one another tearfully and spoke to others with tears. They gave them comfort and consoled themselves. They stroked the heads of [their young]; the hair of the small boys was smoothed down. Fathers said: "Woe, my sons! How may you withstand what hath befallen you and what will come to pass?" And mothers said: "My sons, how may you withstand what you will marvel at and what is now to befall us?"

And it was told, discovered, shown, set forth, announced, and given as assurance to Moctezuma that a woman of our people here, was bringing them here and interpreted [for them]. Her name [was] Marina; Teticpac [was] her home. There at the coast they had first come upon and taken her.[1]

202 And at that time they began no longer to place themselves at [the Spaniards'] feet; the messengers simply went fleeing — they who had overseen the various things of which everywhere they stood in need.

And at this same time, [the Spaniards] came inquiring about Moctezuma: "What sort [of man is he]? Perchance a youth? Perchance mature? Or already old? Perhaps he is already advanced in years, already approaching a ripe age? — An old man, already white-haired?" And they replied to the gods, the Spaniards: "He is a mature man, not fat but rather slender; spare — small and thin."

1. It appears well established that the birthplace of la Malinche (Marina, Malintzin) was Painala, a town now disappeared, which was south of Coatzacoalcos. It is shown in the map in Francisco Javier Clavijero's *Historia Antigua de México* (personal communication, Rafael García Granados).

And when Moctezuma had heard that earnestly he was inquired and asked about, [that] the gods urgently wished to behold him before their eyes, he felt torment and anguish in his heart. He would flee; he wished to escape. Flight was [his] desire; departure was [his] wish. He would hide himself; he would vanish; he would take refuge and conceal himself from the gods. And he had in his heart and thought to himself, imagined and reflected to himself, and conceived the idea, consulted within himself, spoke and asked within himself: Would he enter some cave? And much did he consult with those to whom he [confided] his heart, in whom he laid trust. He spoke of it to a number of them. They said: "There are [some] who know the road in Mictlan, and Tonatiuh ichan, and to Tlalocan, and to Cincalco,[2] that one may rest. [Thou must determine] what place is thy need."

And now he wished and desired [to go] there to Cincalco. Well was it made known; it was so noised abroad.

But this he could not do. He could not hide nor conceal himself. He was weak; was no longer fired; was incapable. Unverified and unfulfilled were the words of the soothsayers, through which they had changed his mind, provoked him, turned his heart, and taken vengeance upon him by seeming to be wise in knowing [the way] to the places named.

[Moctezuma] could only await [the Spaniards]; only steel his heart and tax himself. He quieted and stilled his heart, and resigned himself to whatsoever he might behold and marvel at.

2. Seler (*Einige Kapitel*, p. 474) identifies Mictlan with the north, Tonatiuhichan with the east, Tlalocan with the south, and Cincalco with the west. The corresponding Spanish text, however, says concerning Cincalco: "este sabe a derrojadero donde oy fuera que oy pudiese morrerse en vosotros dentro lugares se pudra sin magestad remediar entrar muerto magestad el lugar que quisiere que alla le llevaremos y alli se consumira sin resibir ningun dolor. Moctezuma se inclina a yrse a la casa de cincalco; y asi se publica por toda la tierra para no esto efecto este negocio injuyeron esto de la que dicen los sacerdotes se pudo resibir y asi Moctezuma procuro desfayarse y de sujetar a todo lo que sentjese, y de pasmarse a todo peligro."

Tenth Chapter, in which is related how the Spaniards slowly left the coast land and marched ahead; and how Moctezuma left the great palace and went there to his princely home.

Then Moctezuma abandoned his old house, the great palace, and stayed at and lived in, and moved to and visited his princely home.

And when, at last, [the Spaniards] came — when already they had come and were making their way forward — first they had come upon and seized a man from Cempoalla, named Tlacochcalcatl, at the time that they had been going to find the lands and the cities. He also was an interpreter, and set them on their road, put them on their course, showed them the way, led them along, and acted as their guide.

And when they came to reach [the region of] Tecoac,[1] on land of the people of Tlaxcalla, there dwelt their [subject] Otomí. And the Otomí met them in battle: with shields they moved against them. And the Otomí, the men of Tecoac, [the Spaniards] completely overwhelmed. Verily, they destroyed them. They speared them; they were pierced with spears. They turned their guns on them; they shot them with iron bolts; they shot them with crossbows. Not just few but great numbers of them they destroyed.[2]

And when [the region of] Tecoac had perished, those of Tlaxcalla — when they heard and knew of it, when they had been told — could not control their alarm; they swooned with fear. Great was the dread which overcame them. Terror seized them.

Then they gathered themselves together and took counsel. There was a lords' council; there was a rulers' council. They considered the news.

They said: "How shall we act? Shall we, perchance, move against them? For, verily, a great warrior and brave leader is the Otomí. [The Spaniards] thought them as nothing; considered them as nil. In no time — in but the flutter of an eyelid —

1. Tecoac: today Molino, in the northern part of the State of Tlaxcala, near the border of the State of Puebla (personal communication, Rafael García Granados).

2. This battle lasted 14 or 15 days, according to Fray Francisco de Aguilar, in *Relación breve de la conquista de Nueva España* (México: José Porrúa e Hijos, Sucs., 1954), pp. 33ss. References to important contemporary Spanish sources, like Aguilar, Díaz, Cervantes, Cortés, and others, is necessary for gauging passage of time and other points often not in the *Florentine Codex* and other Aztec accounts.

635 they destroyed the vassals. So now let us submit to
648 them; let us befriend them; let us make friends of the foe. [For] the common folk suffer."

648 And thereupon the rulers of Tlaxcalla went to meet them. They took them food—birds, eggs, white tortillas, fresh tortillas.

They said to them: "Ye have labored, O our lords."

[These] answered them: "Where is your home? Whence come ye?"

They said: "We are people of Tlaxcalla. You have tired yourselves. You have come to and reached the land [which is] your poor home, Quauhtlaxcalla."

(But in ancient times it was named Texcalla, and the common folk were called Texcallans.)[3]

(auh in ie vecauh moteneoaia Texcalla, in maceoalti mjtoaia, texcalteca.)

3. The Spanish text says: "*Lo cual si agora se llama Quauhtla, antes que vinieron los españoles se llamaua Texcalla.*"
Tlaxcala did not exist as a compact urban center before the Conquest except for the four barrios—Quiahuixtlan, Ocotelulco, Tepeticpac, and Tizatlan—which made up the Republic of Tlaxcala (personal communication, Rafael García Granados).

Eleventh Chapter. Here it is told how the Spaniards came to and reached Tlaxcalla, which was [then] called Texcalla.[1]

They proceeded to guide them, to take and lead them, and thus leave and quarter them in their palace. They made much of them. They offered them whatsoever they needed, and cared for them. And then they offered them their maidens.

Then [the Spaniards] asked them: "Where is Mexico? What manner of place is it? Is it still distant?"

[The Tlaxcallans] answered them: "It is not far distant; it can be reached in perhaps but three days. It is a very good place. And [the Mexicans] are very powerful, very brave warriors, victors who go conquering everywhere."

And those of Tlaxcalla in times past had contended and risen in rage and hatred against the Cholullans, whom they detested and abhorred and with whom they would have no commerce. Wherefore they spoke evil of them, so that [the Spaniards] might attack them by treachery.

They said to them: "They are very wicked, and they are our foes. Those of Cholulla are as strong as the Mexicans. They are friends of the Mexicans."

When the Spaniards had heard this, they then went to Cholulla. Those of Tlaxcalla and Cempoalla accompanied them. They went in war array. When they arrived, thereupon there were shouting and calling out that all the noblemen should come forth—the rulers, leaders, and chieftains, and the common folk. The temple courtyard[2] was filled. And when all had assembled, then [the Spaniards and their allies] closed each of the entrances, wherewhere one entered.

Thereupon the people were fallen upon, slain, and beaten. Those of Cholulla had been caught unaware. With neither arrows nor shields did they meet the Spaniards. Just so, they were slain without warning. They were killed by pure treachery; they died unaware. For in truth the Tlaxcallans had incited [the Spaniards].[3]

1. Corresponding Spanish text: "*que estaua se llamaua texcalla.*"
2. This was at the Temple of Quetzalcoatl, according to the corresponding Spanish text.
3. Cf., however, Domingo Francisco de San Anton Muñón Chimalpahin Quauhtlehuanitzin, *Annales* (Rémi Simeon, ed.: Paris: Maisonneuve et Ch. Leclerc, 1889); the Septième Relation (p. 187) notes: "*estos mesmos españoles quando llegaron a Cholollan yuan pampaxoc quinnonoçaltiaque capitan general Hernando Cortes*"—they slew very many Cholulans when they met the Captain-general, Hernán Cortés, in battle.

202 And all which came to pass, all [this] news they laid before, told, and related to Moctezuma. And
009 the messengers all came, all set forth, took flight. It was no longer a time of calm to listen — for the message to be heard. For all the common folk went in uproar; there were frequent disorders. It was as if the earth quaked, as if the earth quivered — as if the surface [of the land] circled in tumult. There was terror.

And when death had come to Cholulla, then [the Spaniards] started forth in order to come to Mexico. Marshaled together, in a concourse, they came stirring up the dust. Their iron lances, their iron halberds glistened [from afar], and their iron swords moved in a wavy line like a water [course]. Their iron shirts and iron head gear jingled. And what some wore was all iron; they came turned into iron, gleaming. Hence they caused astonishment; thereby they aroused great terror. Because of it they were regarded with much dread — they were greatly feared.

And their dogs came ahead. They went before them. At the vanguard they came, in the lead. They came at their head. They came panting, foam dropping [from their mouths].

Twelfth Chápter. Here is told how Moctezuma sent a lord, a great nobleman, and still many other noblemen, in order that they go to meet the Spaniards; and that with which each gave salutations as they greeted the Captain between Iztactepetl and Popocatepetl.

And Moctezuma thereupon sent and charged the noblemen, whom Tziuacpopocatzin led, and many others besides of his henchmen, to go to meet [Cortés] between Iztactepetl and Popocatepetl, there in Quauhtechcac. They laid before them golden streamers, quetzal feather streamers, and golden necklaces.

And when they had given them the gift, they appeared to smile, to rejoice exceedingly, and to take great pleasure. Like monkeys they seized upon the gold. It was as if then they were satisfied, sated, and gladdened. For in truth they thirsted mightily for gold; they stuffed themselves with it, and starved and lusted for it like pigs.

And they went about moving the golden streamer back and forth, and showed it to one another, all the while babbling; what they said was gibberish.

And when they saw Tziuacpopocatzin, they said: "Is this one perchance Moctezuma?" They spoke to those who came with them, their spies, those of Tlaxcalla and Cempoalla. Thus in secret they questioned them. [These] said: "Not this one, O our Lords." This one was Tziuacpopocatzin, who was appearing in place of Moctezuma.

[The Spaniards] said to him: "Art thou perchance Moctezuma?" He replied: "I am your henchman; I am Moctezuma."

And these said to him: "Go thou hence. Why dost thou lie to us? Whom dost thou take us to be? Thou canst not fool us; thou canst not mock us. Thou canst not make us stupid, nor flatter us, nor become our eyes, nor trick us, nor misdirect our gaze, nor turn us back, nor destroy us, nor dazzle us, nor cast mud into our eyes, nor place a muddy hand over our faces. Thou art not he. Now Moctezuma cannot hide from us. He cannot take refuge. Where can he go? [Is he] perchance a bird that he can fly? Or can he set out on his way under the earth? Is

Thirteenth Chapter. Here is related how Moctezuma sent still other soothsayers in order that they might cast a spell over the Spaniards,[1] and what befell them on the way.

And another company of messengers, who were soothsayers and magicians, and fire priests, also went and made their way to contend with them. But they could do nothing. They could not cast a spell over them; no more could they contend against and exert power over them. No longer could they succeed.

For a drunkard came along the way. They went up against him and stopped, stunned. They beheld him as one from Chalco, for so was he arrayed. He was dressed as a man from Chalco; he acted as a Chalcan. Like one besotted, he bore himself and acted like one who is drunk. With eight grass ropes was he bound about the chest.[2] He accosted them, having come ahead of the outposts of the Spaniards.[3]

And he rose up against them and said: "What do you come to do here again? What do you now wish? What would Moctezuma yet wish to do? Hath he perchance now come to his senses? Is he now filled with a great fear? For he hath committed a fault. He hath abandoned the common folk; he hath destroyed men. People have been struck upon the head; they have been bound [in wrappings for the dead]. He hath laughed at and deceived them!"

And when they had thus seen this, when they had heard his words, to no purpose did they give him attention, praying humbly to him and quickly setting up his abode — his earth pyramid and his straw bed. But he would not then look at it; vain was its erection. To no purpose had they made the earth pyramid.

Just as if they had plunged him into his rage, he presently chid and abused them, and spoke harshly.

648 He said to them:

787 "Why do you vainly stand here? No longer will

791 there be a Mexico; [it is gone] forever. Go hence; it no more existeth. Turn about; look at what befalleth Mexico — what thus already cometh to pass!"

Then they looked there; they quickly turned there to see. They beheld that already all the temples, the tribal temples, the priests' dwellings,[4] and all the houses in Mexico burned; and [it looked] as if already there were fighting.

And when the soothsayers had seen this, it was as if they had lost heart; they could say nothing; it was as if they had been made to swallow something.

They said: "This is not for us to see; it must needs be that Moctezuma see what we have seen. For this is no common being; this is the youth Tezcatlipoca."

000 Then he vanished, and they saw him no more.

And so the messengers went no further to encounter [the Spaniards]; they no longer pressed on toward them. From there the soothsayers and fire priests turned back and came to tell Moctezuma. There they and those who earlier had gone [with] Tziuacpopocatzin saw one another.

And when these messengers had come to arrive, just so they related to Moctezuma how this had come to pass and how they had beheld it. Moctezuma, when he heard it, only bowed his head; he stood with his head lowered. He hung his head: he stood with his head downcast. He did not then speak, but only remained full of woe for a long time as if beside himself.

Finally he thus answered them, and said: "What can we do? What can be done? For we are finished; we have taken the medicine. Shall we perhaps climb a mountain? Should we perhaps flee? For we are Mexicans. Shall we in truth perhaps enslave the Mexican domain? Unlucky[5] are the poor old men and old women! And the children, who have no understanding — where may they be taken? What can be done? Where, in truth, can one go? For now we have taken the medicine. Come what may, in whatsoever way it may befall, we shall marvel at it!"

5. From *macehuiz* on, the passage is translated in Horacio Carochi: *Arte de la lengua mexicana* (México: Imprenta del Museo Nacional, 1892), p. 526.

Fourteenth Chapter, in which it is told how Moctezuma ordered closed the road, so that the Spaniards might not come to arrive here in Mexico.

And Moctezuma had vainly commanded that they obstruct the road; that with maguey they plant the highway which led direct here to Mexico; and that there they be shown the road which led to and entered Texcoco.

And when they had blocked the way with rows of maguey, [the Spaniards] then learned of it and saw that they had only closed the way. They thought nothing of it. They took [the plants] up; they kicked each one far; they hurled them out. Far off they cast the maguey plants.

They slept at Amaquemecan.[1] Then they went on, direct, along the road and came to reach Cuitlauac. There also they slept.

Assembling from all parts the rulers who held sway over the people of the floating gardens — Xochimilco, Cuitlauac, Mixquic — they spoke to them just as they had spoken to the rulers of Chalco. And these rulers of the dwellers in the floating gardens then also submitted.

And when the Spaniards had been satisfied, then they moved on and settled themselves at Itztapalapan. Thereupon they called for and sought the rulers known as the Four Lords — [those of] Itztapalapan, Mexicatzinco, Colhuacan, and Uitzilopochco. In the same manner they spoke to and addressed them (as hath been told). And just so they peacefully and quietly submitted to the Spaniards.

And Moctezuma commanded that none make war upon them nor contend against and meet them in battle. He ordered only that they not neglect [the Spaniards' needs]; that great care be taken of them.

And upon this, here in Mexico, all lay quiet; [the people] did not go out or venture forth. Mothers did not let [children] go out. The roads were empty, and clear; the roads were clean, as in early morning.

Fifteenth Chapter. Here is told how the Spaniards[1] departed from Itztapalapan in order to reach Mexico.

And thereupon they set out in order now to enter here into Mexico. Wherefore they prepared and arrayed themselves for war. They girt themselves and bound on their battle dress. Then the horse[men] were, each one, disposed, arranged in rows, placed in order and put in line.

And the four horse[men] who came guiding, preceding, and moving ahead of the others and occupying the vanguard, were the leaders.[2] They kept turning; they moved back and forth repeatedly; they went on, facing people. They looked hither and thither; they went on to scan every side and to look everywhere, peering among groups of houses. They proceeded examining everything. They kept looking up at the housetops.

Likewise the dogs—their dogs—ran ahead, quickly smelling and sniffing at things and ever panting.

By himself came as guide, going as leader—going ahead alone—one who bore the standard upon his shoulders. He proceeded, waving it back and forth, making it circle, and tossing it from side to side. It would stiffen and raise itself like a man; it would smartly curve, fly up in turning, and billow.[3]

Following him passed the bearers of iron swords. Bared were their iron swords, which flashed brightly. They each bore and carried upon their shoulders their shields—wooden and leather shields.

The second group, the second file to come, was of horses carrying upon their backs many [soldiers] in their cotton armor cuirasses, each with leather shield and iron lance; and all with their iron swords hanging down the flanks of the horses. All had rattles; they had clatterers; they galloped along jingling, and the rattles clacked and resounded. The horses—the

3. Cf. Soler, op. cit., p. 487, whose version varies somewhat from the foregoing.

deer — neighed and whinnied. They sweated profusely; it was as if water fell from them. And flecks of foam fell in drops upon the ground; it dripped like soap [suds]. And as they advanced, great was the clangor and pounding of their hooves; the feet beat as when one casteth stones, and then they pierced holes and made depressions in the ground where they raised their feet. Separately [these] appeared, as they stamped with their hind and forelegs.

The third group was of those who bore iron crossbows. In their arms rested the crossbows. They came wielding and repeatedly testing them, sighting along them. And some bore them upon their shoulders; these came along shouldering the crossbows. And their quivers went hung at their sides or passed under their arms; [these] went filled, crammed, with arrows — with iron bolts. Their cotton armor reached to their knees; it was very thick, very hard, very dense, like limestone. And their heads were likewise wrapped in cotton armor, and from the tops of their heads arose quetzal plumes, dividing and outspread.

The fourth group likewise was of horse[men], similar in array to what hath been told.

The fifth group were those bearing arquebuses, arquebusiers, who carried arquebuses on their shoulders. Some passed along with them [carried] straight forward. And when they had come into the great palace, the residence of the rulers, they fired them — they repeatedly shot the arquebuses. Now they each shattered [the air], they all crackled, scattering [the shot], and barked and thundered. Smoke was spread and diffused; it was dark with smoke. The fumes covered all the ground; they spread all over the soil. By its fetid smell it stupefied and robbed one of one's senses.

And at the very last came, directing from the rear, the greatest warrior, who was like the commanding general,[4] experienced as war ruler and commander of warriors. Surrounding him, crowding about him, at his side and behind, went his brave warriors, his standard bearers, those who served him — those who were like his shaven ones, like his Otomí [warriors], his brave and intrepid ones; the mainstay and support of a city — its soul and foundation.

648 **Sixteenth Chapter.** Here is related how Moctezuma went in peace and calm to meet the Spaniards there at Xoloco,[1] where now standeth the house of Alvarado, or there at the place they call Uitzillan.[2]

Injc caxtolli occe capitulo: vncã mjtoa in quenjn Motecuçoma pacca, iocuxca qujnnamjqujto Españoles, in vmpa xoluco, in axcan ie vmpa manj ical albarado, in anoço vncan qujtoa Vitzillan.

And after this, when [the Spaniards] reached Xoloco, when affairs had thus far developed, and had reached this point,[3] thereupon Moctezuma arrayed and bedight himself in order to meet them. And [with him were] a number of great lords and princes, his chief men and nobles. Upon this, they went to meet them. In shining gourds they set out
[137] fine flowers — sun flowers[4] and magnolias,[5] and,
353] lying in the midst of them, popcorn flowers,[6] yellow magnolias,[7] and cacao blossoms;[8] and [there were] wreaths for the head and garlands. And they bore
[301] golden neck bands, neck bands with pendants, and plaited neck bands.

Auh in ie iuhquj in oacico xoluco, in ie vncan tlantimanj ie vncan iaquetivitz. Niman ie ic muchichioa, mocencaoã in Motecuçomatzin injc tenamjqujz: yoan oc cequjntin veveintin tlatoque in tlaçopipilti, in jtlatocaiovan, in jpilloan: njmã ie ic vi tenamjqujzque, xicalpechtica cõmamãque in tlaçosuchitl, in chimalsuchitl, in iollosuchitl inepantla icatiuh in jzqujsuchitl, in coztic iiesuchitl, in cacaosuchitl, icpacsuchitl, in suchineapantli: yoã qujtequj in teucujtlacozcatl, chaiaoac cozcatl, cozcapetlatl.

648 431 And when, there at Uitzillan, Moctezuma met them, he then offered gifts to the war leaders, to the leaders of the warriors; he gave them flowers; he bejeweled them with neck bands; he hung garlands about them, he placed chains of flowers on them

Auh ie vncan in vitzilla ontenamjc Motecuçomatzin, njman ie ic contlanamaca in iautachcauh, in intepachocauh iauqujzque, cozochimacac, concozcati in cozcatl, consuchicozcati, consuchiapan, conjcpacsuchiti: njman ie ic ixpan contequjlia in teucujtla-

[312]

1. Xoloco or Xoloco served to identify the canal which ran along the Calzada de Chimalpopoca; this canal was crossed by a bridge given the same name. In times past they have been named Canal and Bridge of San Antón. Its exact location is the intersection of the Calzada of San Antonio Abad and Chimalpopoca, the place of the first meeting of Cortés and Moctezuma (personal communication, Rafael García Granados). See map. Alfonso Caso, in *Los barrios antiguos de Tenochtitlan y Tlatelolco* (México, D. F.: 6ª Mesa Redonda, Sociedad Mexicana de Antropología, Sept. 1954; mimeographed), identifies Xoloco as a barrio bounded N. by a line S. of Calle de José Ma. Izazaga; E., Pino Suárez and S. Antonio Abad; S., Lázaro Alcántara; and W., extension of 20 de Noviembre.

2. Near the Church of S. Pablo, according to Sahagún's Spanish text of the *Florentine Codex*, Chapter 30.

3. Corresponding Spanish text: "*En llegando los españoles a aquel río que está cabe las casas de alvarado que se llama Xoloco.*"

4. *Chimalsuchitl. Chimalsuchitl* is mentioned in Hernández, *op. cit.*, I, pp. 101-102 (fig., p. 102). Chimalsuchitl (*ibid.*, p. 108), "*tiene . . . flores redondas amarillas (parecen prodigio) de un palmo, amarillo rojizas con algo de amarillo más fuerte en su parte media*"; *Helianthus annuus* L. Linn.; *girasol, chimalsuchitl, sudo de sujo. Chimalsuchitl* is classified as "*compuesta*."

5. *Yollosuchitl. Yolosúchil* (*Talauma mexicana*, Don?), according to Santamaría, *op. cit.*, III, p. 290. According to Emily Walcott Emmart: *The Badianus Manuscript (Codex Barberini, Latin 241), Vatican Library — an Aztec Herbal of 1552* (Baltimore: Johns Hopkins Press, 1940), p. 310 and Pl. 98, it is the Mexican magnolia and (citing Sahagún), "was reserved solely for the nobility, especially a kind known as *chimalloxochitl*."

6. *Izquizuchitl. Izquizúchil*: in Chiapas, *jazmín del tiempo — Bauhinia forficata*; *B. Jenmani*; *B. Macrophylla* (Santamaría, *op. cit.*, I, p. 426). Popcorn flower (*Bauhinia Jenmani* [La Flora and Lot.] Hemsl.), according to Emmart, *op. cit.*, p. 276 and Pl. 69 — a rare and coveted plant whose flowers were used to flower crowns. In Sahagún (Jourdanet and Simeón ed.), p. 97, n. 2, it is noted that "*Este flor sirve por Farbos hispanolchiquanitl, semellanza Jenmin, de la familia del oyuelaiuiz.*"

7. *Yeuxuchitl. Nardo Antonio Recchi* (*Rerum medicarum novae Hispaniae thesaurus seu plantarum animalium mineralium mexicanorum historia ex Francisci Hernandez* [Rome: Ex Typographia Vitalis Mascardi, 1651], p. 258) gives *elotxochitl* as an alternative (*quam alii Elotxochitl, seu Flosculus Elotis, alii verò Cuauhquipinzahuitl* [*cuauhcapinzahuitl?*] *seu Yeuxuchitl pallidum, nonnul*"), a cold climate plant ("*provenit regionibus frigidis, & nonnunquam hiemi*"). There is a confusion of terminology. Santamaría (*op. cit.*, I, p. 588) identifies it *elotxochitl* as *Magnolia dealbata* Zucc. Emmart (*op. cit.*, p. 275) points out that, while according to Hernández it is a *p. magnolia*, in the *Badianus MS* the flower "appears to belong to the Compositae."

8. *Cacaoxuchitl. Cacahuaxúchil*, according to Santamaría, *op. cit.*, I, p. 250 (*Quararibea funebris Llave*). In Sahagún (Robredo ed.), III, p. 348, it is identified as "*Rosita de cacao. Mipudio funebris. Bot. Ecar-cabiosa.*" Emmart (*op. cit.*, p. 311 and Pl. 98) has *Tabebuia impetiginosa* DC, one of the important cacao plants.

648 and wreaths upon their heads. Thereupon he spread
43 out before [Cortés] the golden neck bands — all the greeting gifts with which the welcome closed. Some he hung with neck bands.

648 Then [Cortés] said to Moctezuma: "Is this not thou? Art thou not he? Art thou Moctezuma?"

Moctezuma replied: "It is so; I [am he]."

At this he arose to meet him face to face, did a great reverence to him, drew close to him, and stood firm.

Thus did he pray and speak [to Cortés]: "O our lord, thou hast suffered fatigue; thou hast spent thyself. Thou hast arrived on earth; thou hast come to thy noble city of Mexico. Thou hast come to occupy thy noble mat and seat, which for a little time I have guarded and watched for thee. For thy governors [of times past] have gone — the rulers Itzcoatl, Moctezuma the Elder, Axayacatl, Tiçoc, Auitzotl — who, not very long ago, came to guard [thy mat and seat] for thee and to govern the city of Mexico. Under their protection the common folk came here. Could they, perchance, now find their descendants, those left behind? O, that one of them might be a witness to marvel that to me now hath befallen what I see, who am the only descendant of our lords. For I dream not, nor start from my sleep, nor see this as in a trance. I do not dream that I see thee and look into thy face. Lo, I have been troubled for a long time. I have gazed into the unknown whence thou hast come — the place of mystery. For the rulers [of old] have gone, saying that thou wouldst come to instruct thy city, [that] thou wouldst descend to thy mat and seat; that thou wouldst return. And now it is fulfilled: thou hast returned; thou hast suffered fatigue; thou hast spent thyself. Arrive now in thy land. Rest, lord; visit thy palace [that] thou mayest rest thy body. Let our lords arrive in the land."[9]

And when Moctezuma had ended his address, which he had directed to the Marquis, Marina explained and interpreted for him. And when the Marquis had heard Moctezuma's words, then he spoke to Marina.[10] He addressed them in a barbarous tongue; he said in his strange language:

"May Moctezuma quiet his heart and not be frightened. We love him much. Now our hearts are

satisfied, because we have known and heard him. For a long time we have wished to see him and to look upon his face. And now that we have seen him and have come to his home in Mexico, at leisure he may hear our words."

Thereupon they took him by the hand and went leading him by it. They clapped him on the back in order to make known to him their love.

And the Spaniards beheld and examined him. They walked about on foot, and mounted or dismounted in order to look at him.

And the nobles, as many as accompanied him, [were], first, Cacamatzin, ruler of Texcoco; second, Tetlepanquetzatzin, ruler of Tlacopan; third Itzquauhtzin, a general, ruler of Tlatilulco; and fourth, Topantemoctzin, of Tlatilulco, who was Moctezuma's store keeper. [These] accompanied him. And still other noblemen of Tenochtitlan [were] Atlixcatzin, a commanding general; Tepeuatzin, a general; Totomotzin, the army commander; Ecatenpatiltzin, and Quappiatzin. When Moctezuma was taken, they only hid themselves and took refuge. They abandoned him in desperation.

—*After Paso y Troncoso*

156, 157. Mexicans capture and sacrifice fifty-three Spaniards, some horses, and many allies (Chapter 35). 158. Spaniards enter the market place at Tlatelolco (Chapter 36). 159. Spaniards fire the temple at Tlatelolco (Chapter 36). 160, 161. Battle in the market place at Tlatelolco (Chapter 36).

[p. 44(v)]

000 **Seventeenth Chapter, in which it is told how the Spaniards took Moctezuma with them as they went into the great palace; and what there happened.**

And when they had gone on to reach and enter the palace, forthwith they seized Moctezuma and kept him under guard,[1] never letting him from their sight, and with him Itzquauhtzin.[2] But the others only ran away.

And when this had come to pass, then the guns shot off. All flew into disorder, ran off to one side, melted from view [as the guns] flashed and spouted sparks.[3] All were as if stricken, drunk, as if all had looked upon [evil]. Fear reigned, as if everyone had lost heart. Even before it grew dark, all huddled in frightened, awed, and thunderstruck groups. All slept in terror.

And when dawn broke, all the things which [the Spaniards] needed were proclaimed [by the crier]: white tortillas, roasted birds, eggs, fresh water, wood — wood for burning, charcoal; earthen vessels — polished ones, water jars small and large, skillets, all [manner of] earthen vessels. [For] in truth [so] Moctezuma had commanded.

And when he summoned the noblemen, they defied him. They were wroth; they would not come to him; they would not go there. He was not listened to. But although not left at his feet,[4] all was given that [the Spaniards] needed—food, drink, chocolate, and fodder for deer.

652 And when [the Spaniards] were settled, they thereupon inquired of Moctezuma as to all the treasure of the city — the devices, the shields. Much did they tax him; with great zeal they demanded gold. And Moctezuma, upon this, proceeded to lead the Spaniards, who went surrounding and crowding about him as he went among them. He went at their head; they advanced with hands laid upon him, taking hold of him. And when they had se-

1. Cervantes de Salazar, in *Crónica de Nueva España* (Madrid: Talleres Gráficos del Museo Nacional de Arqueología y Etnografía, 1936), II, Chapter XXVIIIpp., develops this narrative with much color and detail.

[633] 2. Governor of Tlatelolco (corresponding Spanish text).

3. See Soler, op. cit., p. 494, n. 1.

4. Soler (op. cit., p. 495) reads the phrase as *ante le obedecido* — he was not therefore ignored.

652 rived at the treasure house, called Teocalco,[5] thereupon were brought out all the brilliant goods — the quetzal feather head fan, the devices, the shields, the golden discs, the devils' necklaces, golden nose crescents, golden leg bands,[6] golden arm bands, golden head bands.

Thereupon was the gold torn from the shields and from all the devices; and as all the gold was detached, they then burned — set fire to and consumed in flames — all the various precious things [from which the gold was taken]. It all burned. And the gold the Spaniards melted into bars. And of the green stone, as much as was good to their eyes they took. And the rest of the green stone the men of Tlaxcalla stole. And [the Spaniards] walked everywhere; they went digging into every place — where things were hidden, storage rooms, where things were guarded. They took all, all which they saw to be good.

5. The Spanish text of Chapters 16 and 17 refers to the same reader, presumably the founder of the Tenochca.
6. *Tecuipilcuetzpalli* should be read.

Eighteenth Chapter. Here is told how the Spaniards entered Moctezuma's princely home, and what happened there.

After this they went to Moctezuma's own store house, where were kept Moctezuma's own goods, a place called Totocalco.[1] [They acted] eager and content; they clapped one another on the back, as if happy. And on arriving, when they entered the store house, they scattered, bustling everywhere, as if greedy and covetous.[2] Thereupon were taken out the goods which were in truth [Moctezuma's] own, his exclusively, his portion, precious items all: neck bands with pendants, arm bands with tufts of quetzal feathers, golden arm bands; and bracelets, golden bands with shells to fasten at the knee, and turquoise mosaic crowns with triangular forehead pieces — the rulers' attire; and turquoise nose rods; and all the rest of his array, without number. They took it all. They possessed themselves of all, appropriated all to themselves, and took all to themselves as their own.

And after they had removed all the gold [from the raiment], when it had been torn off, they then piled up in the courtyard, in the middle of the area, all the precious feathers. And when this had been done, when all the gold had been gathered, then Marina summoned, and ordered called, all the noblemen. She got upon the roof-top, on a parapet. She said: "O Mexicans, come hither!" The Spaniards have suffered great fatigue. Bring here food, fresh water, and all which is needed. For they are already tired and exhausted; they are in need; they are spent and in want. Why do you not wish to come? It appeareth that you are angered."

But the Mexicans no longer dared go there. They were much frightened; they were weak with fear; they were terrified. Great awe spread; dread reigned.[4] No longer did one dare do anything. It was as if a fierce beast were there; as if the land lay dead. None the less, not on this account did they do nothing, nor hesitate to leave that which was needed. But they

3. *Xipoalnotzaca*: this should probably be read *xipoalnotzaca*.

4. *Momauhtiaia*: the word is blurred in the MS.

000 left it in fear; they ran only in dread as they went with the tribute. And as they went to lay it on the ground, all would run back; they continually shot back, [like] sparks flying.[9] [Yet] they trembled [as if] with cold.

los in ontlacana. Auh in oconteposto valnetlaitiliz, vallachichitoca, tlacica, tlaviviioca.

9. In Seler, op. cit., p. 487, this passage is rendered: "Und nachdem sie es auf den Boden gelegt hatten, rannten sie zurück, rollten zusammen." A note on p. 488 compares Sahagún with Motolinía (see Molinía, op. cit.).

Ninetenth Chapter. Here is told how the Spaniards commanded the Mexicans to observe the Feast of Uitzilopochtli; yet this came to pass not in the presence of the Captain, for at that time he had gone to the coast where Pánfilo de Narváez had arrived.

And thereafter [Pedro de Alvarado] [1] then asked, as to the Feast of Uitzilopochtli, how the festival [was celebrated]. He wished to marvel at and see how and in what manner it was done. Thereupon Moctezuma issued the command. Those of his vassals who had access to him brought forth the word.[2]

And when the behest had come forth from where Moctezuma was imprisoned, thereupon the women who had fasted for a year ground the amaranth and prickly poppy[3] seed there in the temple courtyard. The Spaniards appeared, decked with great war array; they were dressed in battle gear, bedight as warriors. They came into [the group], walked among them, encircled them, looked at each one — stared into the faces of the grinding women. And after this, when they had come to see them, they then entered the great palace. As is known, they say that at that time they would have slain them if many of us warriors should have been assembled.

And when the Feast of Toxcatl had arrived, toward sundown they began to give man's form to the body [of the amaranth seed dough image of Uitzilopochtli]. They formed it, and gave it the look and appearance of a man. And of this one they fashioned the body only of a dough of amaranth seed and of fish amaranth seed.[4] They formed him on a framework of twigs — [the framework of] Uitzil [opochtli; one laid in] angles.[5]

3. *Chicalutl*: cf. Hernández, op. cit., III, pp. 303-305 (*chicalhui* = *capina*; "cardo," *Argemone mexicana* L.); Santamaría, op. cit., I, p. 483 (*chicalutz*); Ramírez, op. cit., p. 265 (*amarante dégénéré* of Mexico); Guillermo Hahn Manchola: *Mexican Plants for American Gardens* (Boston and New York: Houghton Mifflin Company, 1939), pp. 137-138 (poppy family — *Argemone grandiflora*).

4. Sahagún, in *Biblioteca Mexicana*, p. 191, n. 1, citing Sahagún, III, 1, §2, identifies *michhuauhtli* as *chicalutl*. See also Anderson and Dibble, op. cit., II — *The Conversion*, p. 62.

5. Personal communication from Mgr. Angel Maria Garibay and Byron McAdam, Nov., 1954: "*Y a este le hacían su cuerpo con Masa, con Masa de chicalutz (Argemone mexicana, esp. Lehmann). En un armazón de varas lo ponían; en el armazón de Huizil (opochtli), y el armazón de espinas.*" These authorities explain: "*La Masa chicalutzcal o sea 'varas de Huizil,' porque está formada de palos delgados y cortados del mezquite que se usaban duro y fuerte (mizquizcuatl in tlacatl), y el nombre del dios está derivado Huizil 'punzar, cuchillo' que expresa el elemento Opochtli al de la izquierda del mundo, que es el sur.* — *Huizcatlcuatl lit. 'varas de espina.' La palabra tlacatl, tlacatl significa esta vara dura y resistente, como era la de' los dardos. Se hallo también en el anterior cuadro. Huizcalli es 'espina, espinas,' y 'varas de espinas' porque que era el armazón, o aparato con construcción de varas rajadas o acomodadas en forma de parhelio alargado y trasversal. Sobre este armazón se ponían los Masas o amalles de huauhtli, que eran precisamente de la planta dicha. Llamaban entonces huauhtli, 'Masa de pescado.'* Cf. also Anderson and Dibble, op. cit., II, p. 62; Sahagún (Bustamante ed.), I, p. 137, or Sahagún (Acosta S. ed.), I, p. 153.

796 And when he had already taken shape, then they
778 pasted his head with feather down and made his diagonally-striped face painting, and [gave him] his serpent ear plug of glued turquoise [mosaic]. And from the serpent ear plugs hung the circlet of thorns, [made of] gold, with toes — cut in the form of toes. And his nose rod [was] arrow[-shaped]; of beaten gold [was it] wrought and set with stones. It was shaped of metal plate painted as if with stones. Likewise from it hung what was called the thorn circlet, painted with diagonal stripes. Thus was it diagonally striped: on it were [alternating] blue and yellow [bands]. And upon his head stood his humming bird disguise. Then there was, besides, what was named *anecuyotl*, [his headdress] of featherwork, round, a little narrow and pointed at its base. After
[237] that they placed upon the back of his head the ball of yellow parrot feathers, from which hung his child's lock of hair. And [he had] his cape of stinging nettles,[6] colored black, in five places ornamented with feathers — with eagle down. It was wrapped about him. And below, he was wrapped in his cape with severed heads and bones; and above, he was
[532] wrapped, also, in his jerkin painted with the limbs and members [of men] — all painted there with severed heads, ears, hearts, entrails, livers, lungs, and prints of the hand and the foot. And [he was given] a breech clout. Only the breech clout was very finely wrought. And its design was also the limbs and
[289] members [of men; it was] so woven. But his large [breech clout was] only of paper; it was of white paper,[8] one fathom wide and twenty long, with a design painted on it in blue. And as for the blood banner with the flint knife as the point: his blood banner was only of paper, painted red, as if [striped] with blood. And the flint knife at the point was likewise only of papercwork, and also similarly painted — colored as if with blood. And his shield, which he carried, was of reedwork; [it was] a shield of coarse reeds decorated in four places with feathers —

6. Hernández, *op. cit.*, pp. 390-391, translates as *ortiga* (*Urtica sp.?*); on pp. 388-390 he mentions seven kinds: four are *Urtica sp.*; others are *Urtica urens*, var. *angustifolia*. Barrapindsen mápindu Kuathi Chomy ("quemadura," "ortiga"); and W. *cuaxuxu*- H. B. K. ("*ortiga de tierra caliente*"). Santamaría, *op. cit.*, I, p. 496, writes of *chichicaste*: "*la ortiga amarezza. . . . La especie principal es la* Jatropha urens L. . . . *En México, planta herbácea, semiarpadora, común en las zonas cálidas y templadas*" (*México desconocido, Exploración desconocidísima*). Also, "*Planta urticácea, llamada también ortiga, mal hombre, malo morir, quemador, chichicastillo, tlachinole, en México.*" See also Maximino Martínez: *Las plantas medicinales de México* (México: Ediciones Botas, 1933), pp. 414-415 — *chichicastli* (*Urera caracasana* [Jacq.] Griseb.).

7. In the MS, a blank follows *jiui*. Seler, *op. cit.*, p. 508, has supplied *-ocuic*. Reference to the description of this ceremony in Book II, however, suggests that the evidence is *-mazatl*.

8. In Victor Wolfgang Von Hagen: *The Aztec and Maya Paper Makers* (New York: J. J. Augustin, 1944), p. 68, *amatl-amatl* is given as "coarse, thickly fibered paper, more difficult to fashion than the fig tree variety"; from bull's horn acacia (*Acacia cornigera*). On the other hand, a note in Sahagún (Bustamante ed.), V, p. 231, reads: "*la materia amatl-amatl por la capa de blanco de algunos árboles del género ficus. Sirvió de papel para los pintores o los libros, y de tela para hacer las adornos, cortinas y otros objetos que el culto de los dioses requería.*"

with eagle down — with tufts of feathers. It was called *teuxwelli*. And the shield banner was painted like the blood banner. And his four arrows he held together with his shield. And his left arm band was hanging from his arm; it was composed of [strips of] coyote fur, and from it hung paper cut in strips.

And when dawn broke, when it was now the feast day, early in the morning, then those who had made vows before him unwrapped him. Before him they stood in one row and offered him incense; before him they laid all manner of gifts — feast foods, rolls of amaranth seed dough. And this was when they had not yet taken him up and elevated him to Itepeyoc. And all the men, the young, seasoned warriors, were as if determined and eager to proceed with and observe the feast, and thus show, exhibit proudly, and demonstrate it to the Spaniards.

All hastened and ran, as they made their way toward the temple courtyard, in order there to dance the winding dance. And when all had assembled, then the start was made; then began the chanting and the winding dance. And those who had fasted twenty days, and* those who had fasted a year, stood aside facing the others. Those who hemmed in [the dancers had] their pine cudgels; whosoever tried to leave [the dance] they menaced with the pine cudgels. But one who would [leave to] urinate took off his net cape and his forked heron feather ornament. But one who did not at once obey, who would not be excluded, or who was mischievous, they soundly beat his back therefor, [or] his thighs, [or] his shoulders, and thrust him outside. They cast him out by force; they threw him on his face — he went falling on his face; he fell forth on his ear. No one in their hold took his leave.

The elder brothers of Uitzilopochtli — those who had fasted for a year — were much feared, looked upon with terror and awe, and dreaded. And those at the head, the great leaders, the participants, might leave. They did not detain them. Yet all the small boys, those with the lock of hair at the back of the head, with the back lock of hair, and those with the jar-shaped hair dress — they who had taken a captive with others' help, — the leaders, those called leaders of young men, who were unmarried, who had gone [to war] to take one or two [captives], they also held away. They said to them: "Go along there, knaves! You shall give a good example! Appear not before us!"

9. Tone is repeated in the MS.

796 778 **Twentieth Chapter.** Here is told how the Spaniards[1] slew and destroyed the Mexicans who were celebrating the Feast of Uitzilopochtli in the place called the Temple Courtyard.

Injc cempoalli capitulo: vncã mjtoa in quenjn Espanoles qujnmjctique, qujmjxtlatique in Mexica, in quijlhujqujxtiliaia Vitzilobuchtli in vncã mjtoaia Teuitoalco.

726 And after this, when already the feast was taking place, all were dancing and singing, and there was song with dance. The song roared.

Auh in ie iuhquj, in ie ilhujtlamacho, in ie netotilo in ie cujcò, in ie cujcoanolo: in cujcatl, iuhqujn xaxamacatimanj.

When now it was time, and the moment was opportune for the Spaniards to slay them, then they issued forth girt for battle; they came to block everywhere the ways leading out and in, [called] Quauhquiauac, Tecpantzinco, Acatl yiacapan, and Tezcacoac.[2] And when they had closed them off and also various [other] places, [the people] were contained, [so that] nowhere could they get out.

In ie inmã, in otlainmantic injc temjctizque in Españoles: njman ie ic oalqujça omoiauchichiuhque, ocontzatzaquaco, in jzqujcampa qujxoaia, calacoaia, in quauhqujiaoac tecpantzinco, acatl yiacapan, Tezcacoac. Auh in ocõtzatzacque: no izqujcã momanque, aocac vel hoalqujça.

And this having been done, they then entered the temple courtyard to slay them. They whose task it was to kill them went only afoot, each with [his] leather shield, some with their iron-studded shields, and each with iron sword. Then they surrounded those who danced whereupon they went among the drums. Then they struck the arms of the one who beat the drums; they severed both his hands, and afterwards struck his neck, [so that] his neck [and head] flew off, falling far away. Then they pierced them all with iron lances, and they struck each with the iron swords. Of some they slashed open the back, and then their entrails gushed out. Of some, they split the head; they hacked their heads to pieces; their heads were completely cut up. And of some they hit the shoulder; they split open and cut their bodies to pieces. Some they struck in the shank; some on the thigh. Of some, they struck the belly, and then their entrails streamed forth. And when one in vain would run, he would only drag his entrails like something raw, as he tried to flee. Nowhere could he go. And one who tried to go out, there they struck and pierced him.

726 Spaniards] among [the dead]; they went in among those who had died, only feigning death, and were able to escape. But one who stirred, when they saw him, they pierced.

And the blood of the chieftains ran like water; it spread out slippery, and a foul odor rose from the blood. And the entrails lay as if dragged out. And the Spaniards walked everywhere, searching in the tribal temples; they went making thrusts everywhere in case someone were hidden there. Everywhere they went, ransacking every tribal temple as they hunted.

And when [all this] became known, there then was a shout: "O chieftains! O Mexicans! Hasten here! Let all prepare the devices, shields, and arrows! Come! Hasten here! Already the chieftains have died; they have been put to death, destroyed, shattered, O Mexicans, O chieftains!" Thereupon arose an outcry, a shouting, a shrieking with hands striking the lips. Quickly the chieftains marshaled themselves; as if working with a will they brought the arrows and shields. Then the fray joined. They shot [41] at them with barbed arrows, spears, and tridents, and they loosed darts with broad, obsidian points at them. It was as if a [mass of] deep yellow reeds spread over the Spaniards.

Twenty-first Chapter. Here is told [how] war first began, when the Mexicans gave battle to the Spaniards here in Mexico.

And the Spaniards fortified themselves. And the Spaniards also shot at the Mexicans with iron arrows, and fired the guns at them. And then they put Moctezuma in irons.

And all the chieftains who had died [in the temple courtyard] were thereupon taken out and brought forth, and identified. And the mothers and fathers raised a cry of weeping; all wept over them; there was wailing. First they took them to their homes. Later they carried them to the temple courtyard, brought them together there, and burned them together there at the place called Quauhxicalco.[1] But some [were] burned only at the various young men's houses.

And when the sun was about to enter his house, [but] a little sun still [shone], thereupon Itzquauhtzin cried out; on the [palace] roof-top, he called out and spoke: "O Mexicans, O men of Tenochtitlan and Tlatilulco, your ruler, the lord of men, Moctezuma, beseeketh you and saith: 'Let the Mexicans hear! We are not the equals [of the Spaniards]!'[2] Let [the battle] be abandoned! Let the arrow and shield be stilled! Unhappy [are] the poor old men and women, the common folk, those not yet of understanding — who toddle, who crawl, who lie placed in cradles or on [cradle] boards, those yet untrained!' For this reason doth your ruler say: 'We are not the equals [of the Spaniards]; may [the strife] cease' — because they have shackled him; they have had irons placed on his feet!"

And when he had said this, then they raised a clamor and chid him. The Mexicans became more and more enraged. One, much inflamed by anger, said: "What ails Moctezuma, O fool? [Art thou] not one of his warriors?"[3] Whereupon there was

648 an outcry, and then the tumult rose and spread. Thereafter arrows fell upon the roof-top. But the Spaniards sheltered Moctezuma and Itzquauhtzin under their shields lest the Mexicans pierce them with the arrows.

For this reason were the Mexicans in great wrath: because [the Spaniards] had completely destroyed the chieftains [in the Temple Courtyard]; without warning, they had slain them by treachery.[4]

726 Not yielding to force of arms, [the Mexicans] surrounded the palace. They watched various places that none might enter it secretly — that none might in stealth take in tortillas. Hence, at once was stayed all which they had been receiving; forthwith they left no more. In this way they would starve them.[5]

And as for those who would in vain advise [the besieged], or gain merit by secretly giving [one of them] a little food, if they were seen or detected, they then and there slew them. They killed them on the spot. They either struck them on the back of the head, or they stoned them.

At one time some Mexicans were seen carrying in furs. These let word fall that through them some had secretly gone in. Therefore all were strictly commanded that every road and canal be well guarded and watched; that all take great care in the watching. And those who took in the furs [482] [were] carriers,[6] the emissaries of the stewards of Ayotzintepec and Chinantla. Then and there they breathed their last; their work dropped; at the canal they struck them on the back of the head with wooden clubs.[7] Those of Tenochtitlan had only quarreled among themselves, and quite in confusion had seized the carriers. They said: "Surely he is one [of them]!" Then they put him to death. And if they noted someone [wearing] his fine crystal lip rod, then they quickly seized and killed him. They said: "Surely this one also walketh entering within, to serve food to Moctezuma." And if they saw someone who had tied on himself the maguey fiber cape[8] of a carrier, him also they quickly seized. They said: "This one also is a brute who goeth bearing evil tales, and letteth them in to see Moctezuma."

[p. 58 is blank]

000 **Twenty-second Chapter. Here is told how it became known that the Captain, Don Hernando Cortés, was coming, and that he was returning to Mexico.**

—it became known that the Captain now was coming from Tepeyacac.[1] He had set forth bringing with him many Spaniards, and a great number of men of Tlaxcalla and Cempoalla—many of them, large numbers, an abundance, a teeming multitude, a great host. Not only [in numbers] were they coming, [but] they came to war; they came with devices, in war array, [with] their shields, obsidian-bladed swords, and wooden clubs borne upon their shoulders. They came stirring up a column of dust, [so that] their faces were covered and ashen with dust. They were caked with earth—clothed in dust, in much earth, [which] flaked off. In haste they ran and hurried here. They said, as they went: "Come along, O men of Tlaxcalla! O men of Cempoalla!"

723 And the Mexicans determined among themselves that thereafter they would not be seen, but would hide and conceal themselves. As if the earth lay dead, they would speak aloud no more, [but] only remain spying out of entrances, openings in walls, and holes which in some measure they had pierced through walls, through which they could look out. Only those who had [houses] by the roadside—those along the edge of the road—could do so. But those who were among houses could not. [For] if the Spaniards had seen how many chieftains there were in some places, marshaled together, they would have thought in their hearts that the Mexicans would begin, start, and initiate the war.

And after this, [Cortés] went to and entered the palace; whereupon they shot off the guns.[2]

726 And when this had taken place, then [the Mexicans] came forth intent upon battle. Thereupon there were [war] cries and there was fighting; the fray was then joined; there was battle. Arrows and rocks fell upon the Spaniards.[3]

3. The slide is omitted in the Nahuatl text.

726 But the Spaniards shot iron bolts and guns. Many men were pierced by the arrows and shot by the guns. The crossbowmen aimed the bolts to good purpose; they sighted well along the bolt upon whom they would pierce. And the iron bolts, when they went, seemed to fly humming and whizzing; great was their whirring. And not purposelesly did the arrows fly. All struck and pierced people through. And the guns were well trained upon and aimed at the people. And when [the shots] struck, all went down stretched out on the ground, extended like sleeping-mats. Without one's knowing, it struck one; without warning, it slew one. As many as they hit, so many died,[4] when they struck vital spots — perhaps the forehead, or the back of the head, or the heart, or the breast, or the belly, or the abdomen. But if they struck only the thigh or the shoulder, they did not then die. They were not endangered, but would recover. And when the Mexicans saw how the gun [shots] and iron bolts struck, they went from side to side, as if back and forth, hither and thither. They kept good watch and observed carefully.

And when there had been battle for four days, then [some] chieftains climbed up — selected and chosen ones, who possessed devices, in whose faces was war. All went up to the top of the [pyramid] temple. They carried up two beams and many rounded oak logs, called the god's wood, which they carried up in order to cast them down [on the foe].

And after them climbed the Spaniards; they mounted the [pyramid] temple. The Spaniards[5] proceeded in squadrons and in files. Ahead went the arquebusiers, who climbed up very deliberately, not massed. They advanced firing the arquebuses and thus loosing shots. Second went the crossbowmen, the archers using iron bolts. Third went the swordsmen. Fourth went the lancers, the halberdiers.

And the chieftains in vain marshaled themselves to cast the wood, the thick oak logs, down upon the Spaniards. They only fended them off with their shields at once and took no heed [of them]. And when the Spaniards had reached the summit, they thereupon struck, pierced, and stabbed [the foe]. And the chieftains, on this, threw themselves to the

COO **Twenty-third Chapter, in which is told how Moctezuma and a great nobleman of Tlatilulco had died, and how [the Spaniards] had cast their bodies out before the gate — before the gate of the dwelling in which the Spaniards were.**

And when four days had passed since all [the chieftains] had been hurled from the [pyramid] temple, [the Spaniards] came out and cast forth [the bodies of] Moctezuma and Itzquauhtzin, who had died,[1] at the water's edge at a place called Teoayoc. For here was a carved stone image of a tortoise;[2] like a tortoise was the representation in stone. And when they were seen and recognized as being Moctezuma and Itzquauhtzin, they then took up Moctezuma in their arms and carried him there to a place called Copulco.[3] Thereupon they laid him on a pyre and then kindled and set fire to it. After this, the flames blazed up; it was as if they roared, as the fire formed tongues which rose like tassels of fire. And Moctezuma's body seemed to lie sizzling, and it smelled foul as it burned.

1. Robert Garcia Granados points out, in a personal communication, that "concerning the death of Moctezuma various versions exist, but all of them may be included in two large groups: those emanating from the natives and those emanating from the Spaniards. The former maintain that Moctezuma was killed by the Spaniards, and the latter that his death was due to being struck by a rock as he tried to calm his subjects. Among reports of indigenous origin we consider the opinions of Durán, *Hist. de las Indias de Nueva España*, II, 98 — '. . . *la hallaron muerta con una cuchara a los pies y con unos pedazos en el pecho*'; Alva Ixtlilxochitl, *Décima Tercia Relación de la conquista de los Españoles*, p. 12 — '. . . *en donde dicen que uno de ellos le dió una pedrada de la cual murió, aunque dicen con mentira que los mismos españoles la mataron, y por los pueblos bajo la mataron los españoles*'; Acosta, *Hist. de las Indias*, p. 593 — '*El rey Montezuma hallaron los mexicanos muerto, y pensaron, dicen, de pedradas; y es su opinión que aquello mesmo le mataron los españoles, con otras principales*'; Clavijero, *Hist. Antiguo*, p. 199 — '. . . *dicen que le dieron unas pedradas, unos aunque se la dieron no le pudieron hacer ningún mal porque había ya salido de cinco horas que estaba muerto, y no sabe quien dijo que porque no le dieron la herida le habían matado unos otros españoles por la parte baja*'; Orozco y Berra, *Hist. Ant. y de la Conquista*, IV, 456 — '*Los cual hacen al Dios con que hacen discordia, le dieron fal que Cortés mandó dar garrote a los reyes y cabezas que en su poder estaban*'; Sahagún, *op. cit.*, III, 91 — '*hallaron los mexicanos muerto a Montezuma y al Gobernador de Tlatelulco — pedradas, una en la cabeza, otra en un brazo y otra en una pierna, y parecía que le rogaban se curase y comiese y le decían sobre ella palabras, [pedradas] que le acertó en las sienes la derribaron y mataron sus propios vasallos*'; Cortés, *Cartas de Rel.*, I, 233 — '. . . *de dieron una pedrada [pedrada] que le acertó en las sienes la derribaron y mataron sus propios vasallos*'; Gómara, *Hist. de la Nueva España*, I, 301 — '*que de una las sienes en la cabeza, tan grande, que de allí a tres días murió*'; Villagrán de Tapia, p. 39 — '. . . *tenía que no le dieron con una piedra, creído que hacía, conmella de la frente, que luego se dió muerto*'; Aguilar, *op. cit.*, p. 77 — '. . . *entre otras piedras que contra desmandados, una redondo como una pelota, la cual dió a Montezuma creyendo entre los dos mexicanos, entre los dieron y cayó*'; *Ibid.*, p. 78 — '*Montezuma herido en la cabeza, del al dieron a cuya era . . . y en el aposento donde él estaba había otros tres grandes enemigos determinados con él, a los cuales el dicho Cortés con parecer de los capitanes mandó matar, sin dejar ninguno.*' Besides these, we have the opinion of Clavijero, which we consider the most reasonable: (*Hist. Ant. de México*, II, 211) — '*Los historiadores mexicanos atribuyen su muerte a los españoles y los españoles a los mexicanos. — Yo no puedo creer que los españoles se decidieran a quitar la vida a un rey a quien debían tanto favor y de cuya muerte ellos pidieron aquardar grandes males.*' Modesto Carrasco, *Hist. de México*, p. 234, says that he died baptized and that his godfathers were Cortés and Alvarado." — Clavijero (*op. cit.*, p. 191 — *quebrantaban Españoles y Mexicanos*: *quipochtecatlaxtlahuaque*, the Spaniards killed Mexicans, strangling him), agrees with the source used by Orozco y Berra.

2. The corresponding Spanish text has, *las aguas*, *galápago* — fresh water tortoise. According to Ignacio Alcazar, *Apuntes sobre la antigua México-Tenochtitlán* (Tenochtitlán, D.F.: Instituto Panamericano de Geografía e Historia, 1957), p. 86, it was where now is "*la capilla de Santa Veracruz con Tacuba.*"

3. Corresponding Spanish text: *en aquesto*. — The version of this report, in Anales, *loc. cit.*, differs considerably from that of the Florentine Codex.

Cuo, *op. cit.*, identifies Copulco (Copulco) with a barrio adjacent to Tlatelulco, bounded now N. by Calle de Mosquera; E., Gabriel Leyva; S., Mercaderes; and W., Lerdo (formerly a canal).

764 And as it burned, with pure hatred, with little good will, some chid him, and said: "This evildoer! He terrorized the world! In all the world there was dread [of him]; in all the world there was fear and fright before him; this man, when anyone offended him only a little, he then slew. Many he punished for imagined evil, which was not real but only a fabrication of words."[4] And still many who cursed him, grumbled in their teeth, chattered, and shook their heads.

But Itzquauhtzin they went off with in a boat. They proceeded to take his body in a boat, to arrive here at Tlatilulco. They were deeply saddened; their hearts were desolate. All burst into tears.[5] Some chid him; some belittled him. They said: "The lord, the commanding general Itzquauhtzin, suffered torments. He, with Moctezuma, underwent fatigue and affliction. How much pain he endured for us since we have come here and tarried during all the time that Moctezuma was [alive]!" Thereupon they set in order the palace flag and the rest of the paper array with which they bedight him, and they laid food before him.[6] And then they took him in order to burn him in the Temple Courtyard at a place called Quauhxicalco. With great honors his body burned.

726 And for four days there was fighting. For only seven more days the Spaniards were contained in their quarters. And when the seven days had passed, [some Spaniards] again sallied forth, going to observe, look about, and arrive there at Maçatzintamalco.[7] They went to gather stalks of green maize; they went to secure green ears of maize. Even as enemies they went to gather the green maize. They were in great haste; they no more than got there, and then quickly returned to enter [the palace]. And when they set out, the sun was high; [on their return, the sun] was setting.

7. "Throw Popocatepetl." According to R. H. Barlow, "Análisis de la conquista de Tlatelolco en 1473 y en 1521," *Tlatelolco a través de los tiempos*, V (1949), p. 48, n. 7; it is also stated that "Tlatlilolchiltl (?-1487) he colmo en 'el sitio de Jilotzingo.'" The *Anales de Tlatelolco* (Heinrich Berlin, ed.; México: Antiguo Librería Robredo, 1948), p. 48 (§[illegible]), mentions the place in connection with Nezahualpilli. —In this paragraph, as in many others, is to be noted a great similarity between Sahagún's translation and the *Anales de Tlatelolco* (§§[illegible], 389). —Rafael Garcia Granados, personal communication.

Twenty-fourth Chapter. Here is told how the Spaniards and those of Tlaxcalla set out and fled from Mexico by night.

And after dark, when midnight came, thereupon came out the Spaniards, crowded together, and all of the men of Tlaxcalla. The Spaniards took the lead, and the Tlaxcallans followed behind, covering the rear, like their walls, their rear guard. They went carrying a wooden bridge, which they proceeded to lay across the canal over which they passed.[1]

At the time, it was drizzling; there was a fine sprinkle, a gentle spray, of rain. They crossed easily some of the canals, at Tecpantzinco, Tzapotlan, and Atenchicalco. But when they went to attain Mixcoatechialtitlan,[2] the fourth canal, then it was seen that they were leaving. A woman fetching water spied them, whereupon she cried out and said: "Mexicans! Come here quickly! Already they leave! Your foes are already slinking away!" Then also a man cried out from the top of the [pyramid] temple of Uitzilopochtli. His cries spread well out over the people; everyone heard him. He said: "O chieftains, O Mexicans! Your foes are already setting out! Hasten here by war boat and along the roads!"

And when it was heard, then there was an outcry. On this, the war boatmen broke forth. They rushed; they plied the poles furiously; the boats struck and bumped one another. They came to [a place called] Mictlantenco Macuilcuitlapilco.[3] And from two sides the war boats came upon them. They pressed upon them, the war boats of those of Tenochtitlan and the war boats of those of Tlatilulco. And a number went afoot, direct to Nonoalco, making their way toward Tlacopan, intending to cut off their advance.

1. The Aztec would permit spelling "bridges" and "canals." — According to all other sources, they carried only one wooden bridge, which was mined in the first canal (that is, at Tecpantzinco, before the present site of the Post Office) and could not be used for the rest of the canals (personal communication, Rafael Garcia Granados).

2. Mixcoac is expanded in the Nahuatl MS.

These places were all at canals near the main temple square, on the road to Tlacopan. Cano (op. cit.) says of Atenchicalco and Mixcoatechialtitlan that they were on the Calzada de Tacuba between S. Juan de Letran and Guerrero; Tzapotlan was on the same calzada in the barrio of Tlaxpolco.

3. The corresponding Spanish text refers to "un lugar que se llamaba mictlantenco, macuilquitlapilco"; Cano (op. cit.) mentions a "Macuilquitlapilco, "que pertenece a Sn. Pablo y corresponde Indagalle (57-58)."

726 [411] Thereupon the war bostmen cast their barbed spears at the Spaniards. From two sides—from both sides—fell the barbed spears. And the Spaniards also shot arrows at the Mexicans; they shot iron bolts and guns. On both sides there was death. The Spaniards and the Tlaxcallans were shot by arrows; the Mexicans were shot. And when the Spaniards reached Tlaltecayoacan, there at the Tolteca canal,[4] there they fell into what seemed a deep chasm; they filled an abyss. There all fell. Those of Tlaxcalla and Tiliuhquitepec tumbled in, as well as Spaniards, and the horses, and some women. With them the canal was completely filled, full, clear to the banks. But those who came at the very rear, emerged and crossed over on men, on bodies.

And when they had proceeded to reach Petlacalco,[5] where there was another canal, very slowly, cautiously, and softly, with guarded measure, they set forth upon the wooden bridge. Here they recovered themselves, caught their breaths, and revived their valor.

And when they reached Popotlan,[6] it was dawn, and light was spreading. Already [the Mexicans] set out to attack; already they had been recognized from afar. And then they went raising a war cry against them and surrounding them. The Mexicans took after them; they took those of Tlaxcalla; and Spaniards were slain. And also Mexicans and Tlatilulcans were killed. On both sides was death dealt. They made the Spaniards leave Tlacopan; they pursued them. And when they advanced forcing them from Tiliuhcan and Xocotlihiovican, there at Xoxocotla,[7] there Chimalpopoca, son of Moctezuma, died in the fray. They came upon him pierced by a barbed spear, and wounded. Likewise Tlaltecatzin, [648] lord of the Tepaneca, died there. They had guided the Spaniards, and gone ahead to show them the route, keep them from wrong roads, maintain them on their course, and make the way for them.[8]

Thereupon they passed the Tepçolatl (a small stream). They crossed and forded the water there at Tepçolatl.[9] Then they climbed the embankment

12. Teocalhueyacan is the usual spelling.

[p. 68 is blank]

648 **Twenty-fifth Chapter, in which is related how the people of Teocalhueyacan quietly and peacefully came to meet the Spaniards and offered them food when they fled from Mexico.**

Tlacatecuhli was the name, and Otoncouatl the lordly title, of the one who led them away. There he came to leave food. White tortillas; birds, baked
[262] and boiled; eggs; and some live birds; and some tuna cactus-fruit he spread out before the Captain.

He said: "You have suffered fatigue. Our lords the gods have tired themselves. Let them rest. Let them find a resting place. Let them recover their breath."

Then Marina answered them and said: "My master, the Captain, saith: 'Whence have they come? Where [is] their home?'" Then they said to him: "May our lord hear: we have come from his home at Teocalhueyacan; we are the people of Teocalhueyacan." Then Marina answered: "It is well. They have shown us kindness. We shall go there tomorrow; there we shall sleep."

727 And meanwhile, just as dawn broke, when the earth was visible, then [the Mexicans] carried away — there were carried out — all the men of Tlaxcalla and of Cempoalla; and the Spaniards, who had plunged into the Tolteca canal and [at] Petlacalco or Mictlantonco. In boats they carried them all away. In patches of rushes, among the rushes; in patches of reeds, among the reeds, they went to cast each one and lay them out. They went to throw out each one. And they went to cast out each woman;
[302] naked, yellow[-skinned], anointed with yellow, painted yellow, were the women. All and each of them they stripped and despoiled. They removed all from them and left them bare.

And the Spaniards they placed, each one, apart, in rows; [like] white reed shoots, or white maguey shoots, or white maize ears, or white reed shoots were their bodies. And they removed each of the deer which bore men on their backs, called horses.

And all the goods [of the Spaniards and their allies], carried in their back packs — all was stolen,

727 all was claimed as booty. He who came upon something, took it, whatever it was; he appropriated it, carried it off on his back, and took it to his home. And on the very place where there were the killings, all—whatsoever it was—which they had gone from and left in fear, and much war equipment, were there stolen: the lombard guns, the arquebuses. And some lay there strewn; gunpowder, iron swords, iron lances, halberds, iron crossbows, and iron bolts lay scattered. And also there were looted iron helmets, corselets of iron and of chain mail, and leather, iron,[1] and wooden shields. And there were claimed as booty the bars and plates of gold, and gold dust, and golden necklaces with pendants.

726 And while this was going on, there at Acueco [the Spaniards] had slept; still at night, yet well toward the dawn, they arose, bedight themselves, and girt themselves for battle. Each put on his war array. Thereupon they departed, moved on, and placed themselves in order. And the Mexicans took after them, shouting and crying out—following after them only at a distance, keeping after them from there. And when they reached another place, called Calacoayan, on top of a rounded hill, on a small rise, where there were rows of rocks,[2] there they set upon and slew the people, spearing them. The people there were unwarned, these Calacoayan folk. Without notice they were slain. [The Spaniards] vented and loosed their wrath upon them. And when they had put the people to death, thereupon they came down below and occupied the flat lands, the small plain called Tiçapan. After this they climbed up to Teocalhueyacan.

Twenty-sixth Chapter, in which is told how the Spaniards reached Teocalhueyacan, and how the people there joyfully received them.

On entering Teocalhueyacan, they went to and quartered themselves in the Otomí tribal temple. They had arrived in good time — shortly before noon.

And when they arrived, all was at hand [for them]; all was arranged — all the food, fowls, etc. Great comforts did [the people] offer [the Spaniards]; quite peaceably they entered among them and offered them all which they required — fodder for the deer, water, grains of maize, ears of green and of tender maize, boiled ears of green maize, tortillas of tender maize, boiled ears of tender maize, roasted ears of green maize, tamales of green maize; and slices of squash. They lavished and pressed these things upon them, gained their good will, and made friends with them.

And the people of Tiliuhquitepec who came there [with the Spaniards] had formed a bond with those of Teocalhueyacan; for those of Tiliuhquitepec were relatives and kin of those of Teocalhueyacan.[1] Teocalhueyacan had been the place from which those of Tiliuhquitepec had set forth and originated — their seat and residence. From that place they had gone forth and issued.

There [at Teocalhueyacan] they consulted among themselves, were of one mind, came to common conclusions, and agreed in a common determination to meet with and pray to the Captain — the god — and all the [other] gods: "They have come to reach their revered home here at Teocalhueyacan. Here we, the vassals, the men of Teocalhueyacan and of Tiliuhquitepec, offer our prayers and greetings. And may our lord hear! For Moctezuma and the Mexicans have greatly afflicted and troubled us. To our very noses they have brought misery, for this one

1. Corresponding Spanish text: "y allí unían las amistades de hermandades que se acostumbran de la guerra acostumbrada con los de Teocalhueyacan porque eran todos parientes y deudos propios de Teocalhueyacan salían pues a poblar o Tiliuhquitepec." The commentaries is shown in Pedro Carrasco Pizana: *Los otomíes* (México: Instituto de Historia, 1950), p. 281, fig. 29.

648 hath laid all manner of tribute upon us. But this [Moctezuma] is our lord and our ruler. And if [the gods] hasten to quit us — for the Mexicans are inhuman and very unrighteous — if [the gods] quickly leave us, if they stay away long, [the Mexicans] will return; they will come back here. The Mexicans have not made an end of and destroyed us. But great is their evil; they are full of sin."

And when Marina had informed the Captain of these words, he then answered them: "Let them not be grieved. I shall not tarry; shortly shall I return and speedily shall I find them. Here will be the ruling; here will be the place of governing. The Mexicans will be destroyed, so that they shall not harm you."

And when the people of Teocalhueyacan heard this, they rejoiced greatly. They became proud and haughty because of it. Behold, they therefore rose up and held themselves as better than others, as if they knew all. The more they listened foolishly, the more they were vainly presumptuous; as if then they had lost fear. They took this to be true; they thought that this was already so.

[534 201] And when this was over, and they had slept, when it was still deep night, flutes were blown, they sounded the mixed flutes and the wooden whistles,[2] and drums were beaten. War drums were sounded. Then the Spaniards all arose and got up, and arrayed themselves. And after this, then they departed and filled the road. They went crowding the road.

Then they went on to and reached Tepotzotlan. Before long, in good time, they quartered themselves [there]. Only a short distance had they marched. And the people of Tepotzotlan then scattered and departed, fleeing from them and entering the forest. Some climbed the mountain; some [went into] the gorge. [The town] was quite abandoned to the Spaniards.[3] None dealt with them, because very great were they in destruction of men. Therefore they took flight and ran off. Only their bodies did they save. And all their goods they scattered in haste; they dropped them in their hurry. [The Spaniards] entered the palace; they went into the palace to quarter themselves. There they slept, being all together, all crowded and heaped together. For they were quite frightened; they went in fear.

3. *Tepotzotlan*: the title is omitted in the Nahuatl text.

And when the dawn broke, at a good hour, all ate and broke their fast. When they had broken their fast, when they had eaten their breakfast, then they arose and set forth on the road. [Those of Tepeztoltlan] shouted war cries after them from a distance, from afar. Only holding their distance did they shout at them. And if any dared come up to them, as if one were to speak to them, [the Spaniards] lanced them. Once and for all the Spaniards speared them. No longer did they stir; none escaped; none saved the speared one.

Then they proceeded to and reached Citlaltepec, to rest [there]. But the land was abandoned to them; the folk did not await them.[4] And the chieftains and the people of that place, the householders, showed themselves no more, but only hid. They skulked behind things—perhaps rock cacti,[5] or maguey plants, or a knoll, or a cliff. For [the Spaniards] were not to be opposed.—There also they slept.

And when the dawn broke, in good time, when it was already warm and mild, thereupon [the Spaniards] ate. And then once again they set forth and proceeded to Xoloc. In the same manner, it was abandoned to them. No one awaited them with even a little. Quite hurriedly the houses had been abandoned. No one was there to come out to [the foe]. They had hidden above, on top of Mount Xoloc. Watch was kept on all sides, that nowhere [the Spaniards] might be hidden on a terrace, in a gorge, or in an abyss. They were afraid, in dread, lest they be seen by their foe, lest without warning they set upon them.

And when dawn broke, when they were about to depart, set forth, and go on their way, they thereupon ate. Then they set out. In two files, on each side of the road, marched the deer bearing men upon their backs, called horses. And all the burden-bearers marched within [the files], crowded together.[6] And as they ended their march, they then set and laid fire to the Otomí temples, and to all the temples, houses of the demons. Then they burned; the fire roared. The blaze, the tongues and flames of fire, and the smoke arose. Smoke spread out and

648 settled. And as they went marching, the common folk set out shouting war cries after them, but from a distance.

Then they stopped at Aztaquemecan, at the base and foot of Mount Aztaquemecan. There, below, they rested, at a place called Çacamulco. Also above [346] was a rounded hill, where likewise there was an Otomí temple.[7] There they went to quarter themselves. Likewise it was abandoned to them. No more did the common folk draw near to them; but everywhere the houses remained quiet. They had abandoned the houses in haste.

Twenty-seventh Chapter, in which is told how the Mexicans came to and reached the Spaniards as they followed them at the rear.

Injc cempoalli on chicume capitulo vncan mjtua in quenjn Mexica intech acito in Españoles injc qujnteputztocaia. 726

Also this very time was when the Mexicans advanced and arrived in order that they might cut off [the Spaniards'] progress. The Mexicans went to and established themselves at the foot of a mountain called Tonan. And when dawn broke, the Spaniards[1] arrayed themselves and ate. Likewise the Mexicans bedight themselves and ate and drank. They drank a mixture of *pinole* and water.[2] Some climbed to the top [of the mountain], as scouts and sentinels, to watch for when the Spaniards would depart and move on. In truth, standing guard was their very charge, their concern.

No vel iquac in onacito Mexica in qujniacatzacujlizquja: in ommotecato mexica itzintlan tepetl itoca Tona. [262 272]

And after this, when the Spaniards[3] already proceeded and followed the road, then the scouts cried out and said: "O Mexicans, your foes are already going! Let us array ourselves! Let us arm ourselves, each one! Let us all proceed! Let us all go together! Let none remain behind!" And when they heard this, there was running; all ran hither and thither and went in pursuit.

Auh in ie iuhquj in ie olinj in ie utlatoca in Espanoles: njman ie ic valtzatzi in iautlachixque: qujvalitoa. Mexicae ie iauh in amoiaouh, ticencaoa, ticecencaoa, ticemolinj, ticenvi, aiac mocauhtiaz. Auh in oqujcacque nec netlalolo, tlaixqujqujça, tlatoteca.

And when the Spaniards saw them, they waited for them. They then closed ranks in order to encounter them. They studied them carefully in order to consider how to fare well against them. And after this, [the Mexicans] then ran at them; they hurled themselves at them, so that all were enclosed within [the Spaniards' ranks]. Then they were speared and lanced; indeed, then died in great numbers those of Mexico and Tlatilulco. They went to deliver themselves, cast themselves into [the Spaniards'] hands, and came upon death. But few fled from their hands and so did not die. And those who remained at a distance, who remained following from afar, did not die. And when the Spaniards had dealt death among the people, and had spent their rage, they thereupon departed. All who bore burdens went following them. No one knew of them where they

726 slept at this time. Here was the place to which [the Mexicans] went in order to return, when the Spaniards showed their heels to and turned their backs upon them.

766 727 Upon this, then were identified the chieftains who had died, who had been speared. There they burned all of them. And their charred [remains] they gathered up; they collected the bones of each of them. They heaped them all up and then buried them; they buried them in the earth.

805 And these are all the days since the Spaniards came to and entered Mexico, on One Wind of the day count and One Reed of the year count, on the eve of the tenth day of Quecholli. And when they had tarried one day, Two House, at that very time it was the tenth day of Quecholli. And when they came to the end of Quecholli, when it was the actual feast day, thereupon after it followed Panquetzaliztli, with twenty days.[4] Then after it came Tititl, also with twenty days. Then followed after it Izcalli tlamj,[5] also with twenty days. Then, at that time, set in the five days known as Nemontemi. And when the five days came to an end, then began Atl caualo, or Quauitl eua, in which the year returned[6] —in which began the new year—also of twenty [days]. Then came after it Tlacaxipeualiztli, also of twenty [days]. Then followed after it Toçoztontli, also of twenty [days]. Then proceeded after it Uei toçoztli, also of twenty [days]. Then came after it Toxcatl, also of twenty days. This was when the chieftains perished; when they were cut to pieces, when the Mexicans were put to death. Then followed after it Etzalqualiztli, also of twenty days. Then came after it Tecuilhuitontli. This was when [the foe] set forth; upon an opportune day, the Spaniards set out, to disappear by night without the knowledge of [the Mexicans]; without its being their will, they set forth by night. And when the count of all the days is added, they are two hundred and thirty-five. And they had been our friends for one hundred and ninety-five days. And they were our foes for forty days.

000 And when the Spaniards had thus gone, it was therefore thought that in truth they had departed forever, that indeed once and for all they had left—

Veinte 7 días estuvo nuevamente descansando allí, en Tlaxcapan. Y nuevamente volvió él, a quien siguieron. De allí salieron y se establecieron en Tzcoxcan. Transcurrieron 80 (días) regresó otra vez y se fué a Ixmiquipc y a Quauhtlahuac. De allí pasó a Xochimilco. Allí pereció gente Tlatelolco. De allí partió por segunda vez y volvió sobre Tlalhuicaxpan. Allí pereció gente Tlatelolco.*"

5. Cf. *ibid.*, p. 65, §§309-311.

Twenty-ninth Chapter. Here is related how the plague[1] came, named smallpox, of which the natives died, when the Spaniards set forth from Mexico.

And [even] before the Spaniards had risen against us, a pestilence first came to be prevalent: the smallpox. It was [the month of] Tepeilhuitl when it began, and it spread over the people as great destruction. Some it quite covered [with pustules] on all parts — their faces, their heads, their breasts, etc. There was great havoc. Very many died of it. They could not walk; they only lay in their resting places and beds. They could not move; they could not stir; they could not change position, nor lie on one side, nor face down, nor on their backs. And if they stirred, much did they cry out. Great was its destruction. Covered, mantled with pustules, very many people died of them. And very many starved; there was death from hunger, [for] none could take care of [the sick]; nothing could be done for them.

And on some the pustules were widely separated; they suffered not greatly, neither did many [of them] die. Yet many people were marred by them on their faces; one's face or nose was pitted. Some lost their eyes; they were blinded.

At this time, this pestilence prevailed sixty days, sixty day signs. When it left, when it abated, when there was recovery and the return of life, the plague had already moved toward[2] Chalco, whereby many were disabled — not, however, completely crippled. When it came to be prevalent, [it was the month of] Teotl eco. And when it went, weakened, it was Panquetzaliztli. Then the Mexicans, the chieftains, could revive.

And after this, then the Spaniards came; they marched from Tezcoco. By way of Quauhtitlan they set out, and quartered themselves at Tlacopan. There then the task was divided; their routes were there separated. Pedro de Alvarado's charge became the road leading into Tlatilulco. And the Marquis went

1. Corresponding Spanish term: *pestilencia*. Siler (op. cit., p. 331) has *viruelas* for this term, and "great rash" for *mal general*. Chimalpáhin (op. cit., p. 198, n. 5, has *viruelas* for *cocomoliztli*. — The term is quite commonplace in the Codex.

2. Probably either *rollicate* or *contrite* should be read.

000 to and established quarters at Coyoacan, and it became the Marquis' charge — as well as the road from Acachinanco[3] which led into Tenochtitlan; for the Marquis knew that those of Tenochtitlan were great warriors, great chieftains.

726 And at Nextlatilco, or Iliacac, there in truth first came the fighting, when they quickly came to and reached Nonoalco.[4] The chieftains came pursuing them. None of the Mexicans died. Then the Spaniards turned back. The chieftains, who fought valiantly by boat, the warboatmen, shot darts at them. Their darts rained upon the Spaniards. They then entered [Nonoalco]. And the Marquis thereupon threw himself upon those of Tenochtitlan; he proceeded along the Acachinanco road. Many times, in truth, there was battle, and the Mexicans contended against him.

3. A location in the lake, which can now be fixed as to the east of the Calzada de S. Antonio Abad and south of the Calzada de Fr. Servando Teresa de Mier (personal communication, Rafael García Granados).

4. Nextlatilco and Iliacac are parts of the barrio of Nonoalco, in Tlatelolco. Nonoalco (S. Miguel) is described as an "Islote al norte de la Calzada de Tacuba," an area today bounded N. by Calle de la Emigración and Manuel González; E., irregular line approximating Guerrero; S., approximately Lerdo and Plaza de Almoloya; and W., Olivo. — Cano, op. cit.

Thirtieth Chapter, in which is told how the Spaniards fashioned their boats there at Texcoco, in order to come here to conquer Mexico.

And when their twelve boats had come from Texcoco, all of them were brought together there at Acachinanco. Then the Marquis moved [his camp] there to Acachinanco, whereupon [the Spaniards] proceeded to find out where the boats could enter — where the canals were straight, or deep, or not deep [enough], so that they might nowhere be grounded. But the canals were twisting and winding; they could not there get them in.

Two boats they brought in there; they forced them through the road going straight from Xolloco. And once [for all] they resolved and determined to do away completely with the Mexicans. When they had so decided, then they placed themselves in order. They carried guns; in the lead they went bearing the large cotton banner. And so, without confusion or impatience, they proceeded beating drums, and sounding flutes, and blowing wooden whistles.

And the two boats came floating slowly; at one side only were the boats floating. But on the other side came no boats, because it was a place built up with houses. Then they came, giving battle. On both sides death was dealt and captives were taken. And when those of Tenochtitlan who dwelt in Çoquipan saw this, they then ran off; they fled in fear. The small children were taken from among the people. Into the water they went; all in the water were the common folk. A cry of weeping arose. And the boatmen filled boats with their little ones. They plied the boat poles; they plied them with vigor. Nothing else did they take with them, but left, hastily, in their fear, all their wretched belongings. Indeed everything they left scattered in their hurry. And our foes plundered as they went, taking whatsoever they came upon. What they found as they went, they took; they carried off with them perchance [regular] capes; or large, cotton ones; or devices; or two-toned drums; or ground drums.

726 And those of Tlatilulco fought, there at Çoquipan,[1] in war boats. And when [the Spaniards] came to reach Xolloco, where there was a wall which cut across shutting off the road, they fired at it with the big guns. As the first [charge] fell, it did not crumble; but at the second, it collapsed; at the third, finally it quite went to the ground; and at the fourth, at last the wall [fell] completely leveled.

And the two boats moved in to meet those in war boats.[2] There was fighting in the water. And the guns occupied the entire prows of the boats. And there where the [Mexicans'] boats lay thick, where they lay close together, there, upon them, they fired. Many men died thereby. Then the boats went bobbing up and down and rocking, and sank. Just so was it with the bolts; the one upon whom they could take aim could not escape; he then died and there breathed his last. But when the Mexicans could behold and determine where the gun [shots] and bolts would strike, no longer did they follow a direct course. Only from side to side would they veer; only sideways, at a slant, they traveled.

And when [those on land] also already saw that now the big gun was to fire, they all fell to the ground; all stretched out on the ground, and lay flat. And the chieftains withdrew to enter the spaces among the houses. The road became clear; the wide road lay empty [of people].

And then [the Spaniards] proceeded to and reached Uitzillan,[3] where was yet another wall. And many [Mexicans] were spread out by it, crouched, taking refuge behind the wall. For a short time the [Spaniards'] boats were grounded there, as their prows struck land. There for a brief space they tarried while they prepared the guns.

3. Near the Church of S. Pablo (corresponding Spanish text).

Thirty-first Chapter, in which is related how the Spaniards came with the brigantines and took after those who were in boats in order to join battle with them, and then emerged and came to arrive near all the houses.

And when they had reached [the guns], thereupon they fired upon the wall. And the wall then gave way and parted from behind. And the second time [the shot] struck, the wall then fell to the ground destroyed; it burst open, pierced through. Then likewise the road appeared clear [of men]. And the chieftains who were by the wall then dispersed. All fled from there, escaping in terror. And all the various men [allied to the Spaniards] then quickly advanced filling each canal. Then they speedily leveled them with stones, adobes, and some logs so that they were filled.

And after the canals had been filled, then came the horse[men], perhaps ten of them. They rode in a circle; they came wheeling about, twisting and circling. [And] once again horse[men] came, following after the others. And a number of Tlatilulcans who had quickly entered the palace which had been the house of Moctezuma then emerged in terror, and came up against the horse[men]. One [of them] hanced a Tlatilulcan. And though he had speared him, yet he took hold firmly of the iron lance. Then his companions went up to tear it from [the rider's] hands, threw him down upon his back, and upset him. And when he had fallen tumbled to the earth, they hit him repeatedly, they struck him on the back of the head. He died there.

Thereupon the Spaniards assembled and set out together. Then they reached Quauhquiyauac (the Eagle Gate). And they took with them the lombard gun and the equipment which went with it. They placed it at the Eagle Gate. (And for this reason is it called the Eagle Gate, that there stood an eagle carved in stone, a good man's height tall — so high — and flanking it stood, on one side, an ocelot, and on [the other] a wolf, likewise hewn of stone [)].

726 And, when this had come to pass, the great chieftains in vain took refuge behind the stone columns; and
[347] the stone columns [were] in two rows, altogether eight [of them]. And also the chieftains crowded on the roof terrace of the Coacalli.[1] They filled the roof terrace. None of the chieftains [could] go beyond.

And the Spaniards at first remained quiet. And when they fired the gun, it became very dark; smoke spread out. And those who were hiding behind the stone columns all fled; and all those who were on the roof terrace hurled themselves down, and all ran far away. Then [the Spaniards] took up the gun and went to place it upon the large, round stone.
[534] And on top of the [pyramid Temple of] Uitzilopochtli, holding vigil to no purpose, [priests] struck two-toned drums; as if with all force they struck the two-toned drums. And then two Spaniards climbed up, going to club them there. And when they had gone there to strike them, they cast them down; they threw them down from there.

And the shorn ones, all the chieftains, who had been fighting in boats, all came forth and issued on to the dry land. And those who plied the boating poles for them [were] the young boys; only these guided the boats. And upon this the chieftains then took note of the spaces among the houses. They ran fast; all in truth shouted and said: "O chieftains, make haste!"

And when it came to pass that the Spaniards saw that they were about to come to grips with and pursue them,[2] then they cowered and sped away; they turned tail; they indeed fled and ran. From both sides they were shot at with darts and barbed arrows; and from both sides they were pelted with stones. Shortly, then, they went to find respite at Xolloco, to catch their breath. There [the battle] quieted, and thereupon [the Mexicans] all turned back. And the Spaniards then also returned and went to establish themselves at Acachinanco. But the gun, in their haste, they abandoned there on the large, round stone. Then the chieftains seized it, ran it forward, and went to toss it into the water. They pulled it to Tetamaçolco.[3]

3. Spanish text: "[illegible] que llamaba Tetamaçolco, que era cabo de [illegible] que se llama Tlapanohuaya, donde [illegible] los Indios."

Thirty-second Chapter. Here is told how the Mexicans in terror left their city, from fear which they felt of the Spaniards.

And meanwhile those of Tenochtitlan came to enter, here, in Tlatilulco. There were cries of weeping, and there were shouts. Many were the tears of the beloved women. And the men[1] went with their women. One or another carried his child upon his shoulders. When, then, they abandoned their city, it was for only a day. And the Tlatilulcans yet again went there to Tenochtitlan to give battle.

And at this time Pedro Alvarado yet once more moved there against Iliacac, which is toward Nonoalco. Nothing could be accomplish. It was as if he had arisen against a stone. For those of Tlatilulco put forth great effort. On both sides was there fighting, on the road and on the water with war boats. When Alvarado grew tired, then he turned back and went to camp at Tlacopan. And only two days after they had thrown against them the boats which first went—only[2] two—then all [the boats] set forth together and stopped at the outer houses of Nonoalco. Thereupon they issued on to the dry land, the firm ground. Then they followed the narrow road, [into] the heart of the settlement.

And when the Spaniards came, all was clear. No man of the common folk appeared. But Tlilocatzin, a great chieftain and very brave, then cast three of his stones which he carried—great, large, round rocks: well stones, or white stones. One he had in his hand; two he bore upon his shield. Thereupon he gave cheer to and went against the Spaniards, dispersing and scattering them in the water. Into the water they went. In truth, heavily laden on the water [were the boats] as they went down [into them].

1. Tepujchtlaca. Literally, the men, as Clavigero rendered in his translation.
2. Ome: probably per le omnem.

701 (And this Tlilacatzin was an Otomí [warrior], as a chieftain, because of his Otomí hairdress. For he despised his foes, even the Spaniards. He disdained them; in truth, all were completely terrified. When they saw Tlilacatzin, our foes then covered. And much did they try to slay him; either to pierce him with iron bolts, or shoot him with a gun. But Tlilacatzin disguised himself, that he might not be
[301] recognized. At times he put on a device; he hung his lip pendants and inserted his golden ear plugs, and he put on a neck band of small white shells; but his head went uncovered, so that it was apparent that he was an Otomí. And sometimes [he had] only his heavy cotton shirt and a thin band with
[293] which he wrapped his forehead. And at times he disguised himself by putting on a feather headdress and wig, a head band with [two] eagle feather tufts which went at the back of the head, used to bind [his hair]. Thus did one go with it bound at the time that men were cast into the fire.[3] He went in the guise of one who cast men into the fire; he went imitating those who cast men into the fire. [He had] his golden arm bands; on both arms he had them — in both places he had them on his arms. And the
[301] golden arm bands glistened.[4] And also he had about the calves of his legs, leather bands — gilded leg bands, which shone.)

726 And then, next day, when once again their boats set out, they grounded them at Nonoalco, at Ayauhcalitlan.[5] And then also came out those who went afoot, as well as all the Tlaxcaltecas and Otomí. Indeed, in force the Spaniards issued to fall upon [the Mexicans]. And when they came to and arrived at Nonoalco, thereupon there were battle and fighting; in truth there spread strife and war. Death was dealt on both sides. All their foes were shot at with arrows, and also all the Mexicans. On both sides equally was there suffering. Thus all day and all night they all fought.

But [there were] two great chieftains who turned not their faces, who despised those who were their foes, who set no value upon their bodies. The first man was named Tlaxocmin; the second was named Temoctzin. And a third was the [above]mentioned Tlilacatzin.

726 **Thirty-third Chapter, in which is told how the people of the floating gardens, those of Xochimilco and Cuitlauac, and of Itztapalapan, and still others, came to help the Mexicans.**

726 And once it came to pass that the people of Xochi-
648 milco, Mixquic, Culhuacan, Mexicatzinco, and Itz-
tapalapan sent emissaries who came to confer with Quauhtemoc and still other noblemen and chieftains. They came, saying to them: "O my beloved prince, with a little we have come to give aid to the city. Perchance it may be that thus the debt is paid [you]. These are the words of the rulers who yet guard there. In truth here dwell the rulers; so have come and assembled the eagle and ocelot [warriors] in boats, in order, they say, now to drive off our foes."

And upon this, when they had said their say, when they had spoken, thereupon [Quauhtemoc] replied to them: "It is well. Ye have shown favor [to us]; ye have suffered trials and tribulations. Help the city. Let there be battle!"

415 After this, he gave them gifts; he gave them
431 devices and shields, and they gave them each choco-
772 late. To each one they gave a shallow gourd vessel of chocolate. Thereupon he said to them: "Onward! Let there be battle, O chieftains! For our foes already are come!" Thereafter went the emissaries there to where lived those of Cuitlauac; they escorted them there. And as they went, then grew the crying of war cries everywhere along the road. Thereafter there was fighting.

726 But these people of Xochimilco then also raised a war cry and fell upon the boats. In no wise did they help us, but only, then, robbed the people. They despoiled the beloved women and the small children, and the beloved old women. Then some they there slew; there these breathed their last. And still others they did not slay, but carefully lowered them into the boats.

And when already they were doing this, when already they were spiriting the people away, then chieftains raised an outcry. They said: "O Mexicans, what now are the fools doing? Let all pursue them!" Thereupon there were war cries. They gave them chase in boats.

726 And all the boats which were at Nonoalco then were assembled there; all left from there in order to pursue. Then they proceeded to hem in those of Xochimilco. Thereupon they slew them; they spared and beat them. But some they only took. And almost all died there; in truth, there they were destroyed. And all [the women] whom they had seized, all of them they left there. None of the beloved women were taken away.

And while this was already coming to pass, then the Spaniards settled back.

And just as those of Xochimilco had devised, and would have done, just so [the Spaniards] would do away with us through deceit. And all whom they seized of Xochimilco, Cuitlauac, etc., they thereupon brought and hurried there to Yacacolco, where now is [the Church of] Santa Ana.[1] There were Quauhtemoc and Mayeuatzin, ruler of Cuitlauac (for he was here at the time of the war).

And when [those of Cuitlauac] had been brought, they greeted Mayeuatzin. They said to him: O my younger brother, [may it] be well with thee." But Mayeuatzin replied to them: "You fools, have I perchance bidden you? What have you done?" And Quauhtemoc then said to Mayeuatzin: "O my younger brother, do thy work." And Mayeuatzin thereupon offered up as sacrifices four, whom he slew, of his vassals. Likewise Quauhtemoc slew four.

And later, of all who were included among the captives, it was commanded that they be slain, everywhere in the temples of the devils. Everywhere the captives gave blood to [the images].

726 687 And afterwards the Mexicans were wroth because of this. They said: "Verily, here among us, mingling with us, are the people of Xochimilco; they have already made their homes here. Do they not, in truth, deliver their messages [to our foes]? So these we shall take forth; they shall perish!" And upon this, when judgment was indeed pronounced, thereupon were drawn out all the beloved women and old women, and those already mature. All were slain. None were spared, because of those who went bearing false witness of them and doing undeserved ill: those of Xochimilco and Cuitlauac who came [saying] they would help us.

1. Spanish text: "en el Tlaltelco." A Sarabia, "sede del gobierno de Guadalupe, donde actualmente se encuentra el templo de Santa Ana en la calle del Tecolotillo," according to R. H. Barlow: "Una pintura de la conquista en el templo de Santiago," *Tlatoani* 4 *estudio de los códices*, VI (1949), p. 58. Cline (op. cit.) identifies it as a district or neighborhood in the barrio of Sta. Ana Atlamaxac, near Tlatelolco.

And then, some days later, two boats came there to Yauhtenco.[2] The Spaniards came alone, proceeding in the early dawn. There were no [allied Indian] men; [the Spaniards] came quite alone. And upon this, when they had beached their boats, they thereupon leaped out on dry land. And when they had set forth on the firm ground, then they came giving battle. They went each firing guns and crossbows.

And the chieftains flattened themselves behind walls; they remained hidden in houses or behind walls. And the sentinel [had] as his care and charge [to know] when to break forth. And when it was already good time, at the right moment, he then cried out and said: "O Mexicans, onward!"

1. Eighteen are mentioned here. Cf. also Bustamante, *op. cit.*, p. 189 (chapter heading). The corresponding Spanish text of the *Florentine Codex* has fifteen.

2. Bustamante, *loc. cit.*: *"en que estaba una casa que era como casa de audiencia, cerca de donde agora es la iglesia de Santa Ana."*

3. Corresponding Spanish text: *"los mexicanos los conquistaron delante del pueblo que se llamaba Mexicalzinco y los otros españoles estaban refugiados dentro las sementeras como los mexicanos."*

4. Bustamante, *op. cit.*, p. 190: *"que se alojaron [el barrio de] S. Francisco."* Cano (*op. cit.*) says it is the same as Cihuatecpan, in Mexico-Tenochtitlan.

5. Bustamante, *loc. cit.*: *"cerca del barrio de San Lucas (que por otro nombre se llama Atenco)."* Cano (*op. cit.*) identifies Coyonacazco as a part of the barrio of Tlaquechihuitlan, to the north in Tlatelolco. R. H. Barlow ("Cinco siglos de los calles de Tlatelolco," *Tlatelolco a través de los tiempos*, IX [1947], p. 32) places it *"en lugar de la actuales calles del Peñonceillo de Hidalgo."* A map in Antonio Espejo and R. H. Barlow: "El plano más antiguo de Tlatelolco," *Tlatelolco a través de los tiempos*, I (1944), shows it in the northeast part of the city.

6. Bustamante, *loc. cit.*: *"Rodrigo de Castañeda (el quien los indios llamaban Xicotencatl, por usarlo por enseña hombro)."*

95

726 balls. Thereupon they shot iron bolts; but only one was pierced, in the forehead, wherefore he then died. Castañeda was the one who shot the arrow. And the chieftains moved in against him and they drove [the Spaniards] into the water, stoning them. And Castañeda there would have perished, but he clung to the boat and thus they carried him to Xocotitlan.

[349] And one boat lay at Tetenanepantzco, where the walls curve.[7] And another boat lay there at To-
[491] tecco,[8] where the road goes direct to Tepetzinco.[9] It only lay on guard in the water, and at nightfall they took it [away].

And some days thereafter the Spaniards once
[443 again resolved [to war upon] us.[10] Then they came,
317] and chose the Quauecatitlan[11] road which led direct to the salt market. But there on the Quauecatitlan road, they could not spread out. So all those of Tlaxcalla, Acolhuacan, and Chalco thereupon filled in the canals.[12] And on the road where they could not spread out, they cast adobes and roof beams; door lintels, pillars, and round logs were set in; they threw bundles of reeds into the water. And when it was filled in, then the Spaniards, disposed [in battle order], very slowly proceeded: a cotton banner led them; they went blowing trumpets and beating drums. And behind them went in position all the Tlaxcallans, and indeed all those of [other allied]
[533] cities. Those of Tlaxcalla became very brave; they shook their heads, beat their chests, and sang. The Mexicans also sang. There was chanting on both sides. They intoned whatsoever they remembered. Thus they were able to animate themselves.

And as they reached Tlalhuacan,[13] all the chieftains were crouched; they stretched themselves out very flat, and were well hidden. They hid their

hosts. They waited until the time that the command to charge would be given, the time that they would hear the battle cry, and the order to advance. And when the cry was given, [it was]: "O Mexicans, onward against them!" Then the Tlapaneca Ecatzin, an Otomí [warrior], came to engage them and to hurl himself at them. He said: "O chieftains of Tlatilulco, onward! Who are these barbarians? Move forward!" Then he proceeded to throw himself against a Spaniard and struck him to the ground. This [Ecatzin] came first to cast him to the ground. He did it to him first. And when he had gone to overthrow him, then they went dragging the Spaniard off.

726 **Thirty-fifth Chapter.** Here is related how once again the Mexicans took captives and seized Spaniards, and, as counted, the captured Spaniards [were] fifty-three. And also [were taken] many men of Tlaxcalla, Tezcuco, Chalco, and Xochimilco. Also [it is told] how they slew all in sacrifice there before those which were their gods.

And when this had come to pass, then the chieftains who had been crouched, together fell upon them; they fell upon them from their ambush in the spaces among houses. And the Spaniards, when they saw this, [were] as if drunk. Thereupon were
727 captives made. Many men of Tlaxcalla, Acolhua-
726 can, Chalco, Xochimilco, etc., were taken. Verily, myriads of captives were made and men slain. Truly, they forced the Spaniards into the water, and indeed all the [allied] people.

And the road became very slippery. It could no longer be traveled; each one could only slip and slide. And the captives were dragged along. Here in this place the [Spaniards'] standard was taken. Here it was seized. Those of Tlatilulco took it. It was captured there where now is [the church] named San Martín. But [the Spaniards] showed no concern over it; they were just troubled over it.[1] And others escaped [the Mexicans'] hands. They went leaving them exhausted at Colhuacatonco,[2] at the edge of the canal. There they retired to establish themselves.

727 And after this they took the captives there to Yacacolco. They were urged forward; they went surrounding their captives. One went weeping; one singing; one crying war cries while striking the mouth with the palm of the hand. And when they had been brought to Yacacolco, thereupon they were placed in rows, in files. One by one they proceeded to the small pyramid, where they were slain. First went the Spaniards. They took the lead. But all those of the [allied] cities came only last, following. And when they had been slain, then they strung the

3. Corresponding Spanish text: "*los capitanes eran diez . . . los otros indios eran hasta . . . los caballos eran hasta.*"

4. Sahagún, *op. cit.*, p. 770, sends this passage.

5. *Xiquacatl*: [illegible], or straw, of maize, which Mexican cattle eat, green or dry; in other words, the plant itself after the maize grains have been harvested (personal communication, Rafael García Granados). — In Sahagún (Rekendo ed.), III, pp. 271-272, it is described as "*hierba . . . es muy verde y tiene parecer como el trigo, y es blanco, almacena las cosechas y otras cosas.*" Ramírez, *op. cit.*, p. 259, describing it as a diuretic and purgative, suggests "maize straw" as a name.

6. *Tepaxquiquatl*: probably pasture on saline lands, of the variety called "grama," creeps over the ground, putting forth small roots (personal communication, Rafael García Granados). — For this, Sahagún, *op. cit.*, p. 271, has "*hierba muy dañosa y espinosa, que se hace en tierra salitrosa . . . es buena para quemar.*" Ramírez, *op. cit.*, p. 223, citing Simón (*op. cit.*), calls it mere grass or couch grass, possibly *Distichlis spicata* (L.) Greene. Grama (*tepaxquiquatl* in Molina, *op. cit.*), Santamaría (*op. cit.*, II, p. 31) identifies as *Panicum repens* L., very abundant in the Americas.

7. *Tzumpanquauitl*. According to Sahagún (*op. cit.*, III, p. 279), "*es árbol mediano, tiene ramas arrojadas, tiene la capa colorada y de buen parecer, tiene unas flores que se llaman equimoxochitl; son muy colorados y de buen parecer y no tienen olor ninguno; las hojas de este árbol se llaman equimitl*"; p. 148: "*Equimitl. Árbol, flor y fruto del Colorín.* Erythrina corallodendron. *D.C.* Leguminosas." Santamaría, *op. cit.*, III, p. 321, giving the same botanical identifications and *E. americana* Mill., adds the current common name (*zompanda*), and observes of the bean (*colorín*) that it is "*veneno de pajarillo rojo, dicen que envenena un alcaloide muy venenoso.*"

8. *Tzacuxuchitl*. Ramírez, *op. cit.*, p. 309, calling it a "glue flower," identifies it as *Bletia campanulata* La Llave and Lex. (?), *Epidendrum pastorale* La Llave and Lex. (?), *Gomesiana macrodactyla* Kunth (?) — all orchids. Hernández, *op. cit.*, II, pp. 375-376: *Tzacuxuchitl o tzacuchil floridus. Bletia campanulata* La Llave y Lex, or *B. coccinea* La Llave y Lex.

9. *Tlaquilli*. In Molina, *op. cit.*, tlaquilli is "plaster or stucco. *Tlaquilin*, however, is given by Ramírez, *op. cit.*, p. 226, as "frilled flower" — probably *Mirabilis jalapa* L., known as marvella. It is medicinal. Santamaría, *op. cit.*, III, p. 186, adds these common names: *San Diego de la noche, arrebolera, and tlaquilla.*

10. *Tetzmetl*. Sahagún, *op. cit.*, p. 249, says it is like *xamaxilin*: "*hojas muy verdes y carnosas y redondillas, y también nacen hacia, y tiene las mismas enfermedades . . . calientes . . . dulces, y aperitivas y laxativas . . . la tomaban de esta vida mexicana*" (medicinal). Ramírez identifies it as *Sedum dendroideum* Moziño and Sessé — commonly, *siempreviva* (*op. cit.*, p. 223). Santamaría, *op. cit.*, III, p. 85, adds *S. quitense* H. B. K. and *S. mexicanum* Sims.

11. Cf., however, Sahagún, *op. cit.*, p. 550: "*and Stock and Leder and Hirschhaut, ciervo bruno, bufano, rinoceros, bromisco, asno o ro, and Tzacuxipur and Lebenszeiget and auch Tezcatl.*" Of *tezcatl* or *tezcatl*, Sahagún (*op. cit.*, p. 289) says it is a bad country plant used for coloring. Santamaría, *op. cit.*, III, p. 143 (*tezcatl*), says it is "*nombre vulgar de varias plantas endemoniadas, como el capulincillo o nigua* (Cocculus laurifolius), *el tecopatle* (Mimosa borealis), *y otras.*"

726 **Thirty-sixth Chapter, in which is told how the Spaniards for the first time came to and entered the market place here in Tlatiluco.**

And at one time it came to pass that four horse-[men] came to enter the market place. And when they had proceeded to come in, they then traveled in a circle; they followed about the outer edge of the market place and went lancing the chieftains. Many were the dead. They had penetrated the market place at this time — the first time that they had come to look at the market place. Then they went; they fled.

And the chieftains dared to come up to and give them chase. And at the time they had come, entering the market place for the first time, [it was] unexpected; they had given no warning.

And also this was the time that they burned the temple.[1] They laid fire to it. And when they had set it afire, then it flared up. Very high rose the blaze, the tongues of flame. It was as if the fire roared and kept flaring up. And when [the Tlatilulcans] saw that the temple was now burning, then there was weeping; there were tearful greetings. For it was thought that there would be plundering.[2]

And after there had been battle for a long time in the market place, the war spread to the outskirts. Little by little, they abandoned the wall,[3] there at Tenexnamacoyan. And there at Copalnamacoyan,[4] and at Atecocolecan[5] and at Xochicalco,[6] [the Mexicans][7] entered among the houses. The chieftains took positions on the wall. And all the houses of those of Quauhquechollan, which stood around the market place, all became a barrier. Many [of the Mexicans] took their places upon the roof terraces,

7. From here on, Tlatelolco is the scene of battle. Tlatelolcan warriors of Tenochtitlan and Tlatelolco fought together. The term "Mexicans," from this point forward, in brackets, implies Indians of both these cities.

726 in order to throw rocks. They cast down stones and darts; they cast rocks and shot arrows. And all the back walls of the houses of the people of Quauhquechollan[8] were pierced with openings. They made small openings. And when again the horse[men] pursued them, then they would try to cling to their legs and cut off their advance. [Then] the chieftains quickly entered [the openings].

And at one time it came to pass that the Spaniards proceeded to enter Acatl yiacapan.[9] Then there was plundering, and poor, common folk were spirited away. And when the chieftains noted it, then they fell upon the [enemy] chieftains. There came to stand a shorn one, named Axoquentzin. He pursued his foes. He forced them to let [the common folk] go; he made them turn about. And this chieftain died there. They shot him with an iron bolt, there, in the breast. When they shot him, the arrow pierced his heart. He lay as if stretching after a sleep.[10] So had he died. And then our foes withdrew to establish themselves.

And there at Yacacolco,[11] similarly was there battle. The Spaniards[12] who shot iron bolts came in order to aid and join the Four Lords,[13] who had gone to close off the road. And the chieftains then crouched, in order to cut into their rear as the sun already hung [low]. And at this point, when they were already coming, some of our foes climbed upon the roof terrace. And, crying out, they said: "Ho, O Tlaxcallans! Hasten here! Here are our foes!" Then they cast down darts upon those who were spread out on the ground. Then they broke through.[14]

Slowly [the Spaniards] came to reach Yacacolco, where the battle had spread to the outskirts. They had come only to skirmish; they could not break the Tlatilulcans, who were on the other side of the water, shooting arrows and casting rocks at them. No overpass, no bridge did [the Spaniards] take.

11. Corresponding Spanish text: "se apercibieron los españoles que pelearon de la parte de aca [illegible]." In Bernaldez, op. cit., p. 195, the fighting is said to have taken place at Tlacochcalco, "que es á donde está agora la iglesia de Santa Ana."

12. Españoles: the title is omitted in the MS.

13. See Chapter 14.

14. Bernaldez, op. cit., p. 195: "y dieron voces pensos los españoles y dixeronos, alegrense dixeronos y españoles subieron sobre los cimientos de los [illegible] que estaban en rededor del almagueno. Entre que subieron sobre los cimientos dixeronos los mexicanos [illegible] la ciudad, y dieron voces á los que iban por bajo y dijeron. . . . [illegible], dixeronos, que vuestros enemigos están aquí en ciudad! Y luego comenzaron á flechar á los que estaban en la ciudad, mexicanos y dixeronos, y los de la ciudad como dichos que ya los habían dicho, comenzaron á huir."

Thirty-seventh Chapter. Here is told how the Mexicans laboriously uncovered by night the waterways which the Spaniards had filled in by day.

And our foes went filling in the canals. And when the enemies had gone, once more [the Mexicans] took up the rocks with which the foes had filled them in. When dawn broke, once again it was even as it had been the day before. Often they so did, where [the Spaniards] had filled in the canals — immediately taking up the stones, the wood, etc. — so that by a little the war was lengthened, and gradually [the Spaniards] broke through [the Mexicans]. For these canals were looked upon as great walls.

And [as far] the Spaniards and all the Tlaxcallans, their common charge was the road, the highway to Yacacolco, and to Tlilhuacan and Atencapan.[1] And Yacacolco, Cuepopan,[2] Apanécan,[3] and Atlicuhyan, with which went Ayacac[4] and Tetecco, were the charge of those of Xochimilco, Cuitlauac, Mixquic, Culhuacan, and Itztapalapan. It became their common task to give battle in boats.

And the boatmen and archers of Atlicuhyan and Ayacac girded themselves to come to grips with them. They lost no time. In truth, they were evenly matched. [It was] as if it rained barbed spears; like serpents, arrows streamed and poured. When they hurled them with spear throwers, it was as if a deep yellow mass spread over the foes.

And a number of chieftains — the Tenacacoccal Xiuhcuacatzin, the Tequenecal Quequeuzin,[5] Uitzitzin, and Itzcuintzin, people of Yacacolco, whose houses were situated there, neither tarried, nor abandoned their beloved women and children. With difficulty they went to bring them safely to a house by another canal which was in Amaxac.

5. Siler, op. cit., p. 755, groups the names and cities as given here.

726 And once it befell that the Spaniards came forth there at Tonecco. And when they had reached where the young men's house stood, a place called Ayacac, then they set fire to it.

And another of the Spaniards' boats put in there at Atlicuhyan, and many of the boats of those of Xochimilco entered with it. And the chieftain Tetlistecatzin, the commanding general, placed himself upon a small pyramid and stood looking toward the Spaniards. And the chieftain Coyouaztzin put on the device of an eagle-ocelot [warrior]—half eagle and half ocelot. In a boat he came from Tolmayecan to fall upon [the Spaniards]. And many war boats[6] came following him. He said: "O chieftains, onward! Let us repulse them!" Thereupon they struck against the ship. And when the Spaniards had seen this, they then turned back, and [the Mexicans] went after them. Then [Coyouaztzin and the Mexicans] made straight for Atlicuhyan. And the Spaniards' boats then withdrew from the others and went to take position at Amanalco. And many of those of Xochimilco died of the arrows. And after this, when [the Mexicans] had pursued them, once again [the Spaniards] held a position, and then drove the chieftains back. Coyouaztzin hid himself behind a small pyramid. Then he succeeded in turning them back and forced them there where stood the young men's house at Atlicuhyan. Once more [the Spaniards] pursued Coyouaztzin and came making him jump into the water. And once again Itzpapalotzin, a young Otomí [warrior], threw them back. He had also assumed a device. Then he took after them; like a ball of mud he rolled them together. In truth, he went to battle with them in a boat.[7] Then they departed. Thus were they undone.

And those of Cuitlaua thought that their ruler Mayauatzin had indeed died—that he had perished with the others. They were exceeding wroth; they said: "You have slain our ruler. Bring him forth! Why have you slain our ruler?" And Mayauatzin, when he had learned that his vassals were angry, that they were angry in his behalf, then said to Coyouaztzin:[8] "O my elder brother, set up one of our elders who can shout loudly—of loud speech and

7. *Also another:* one is probably a copyist's error. Seler, op. cit., p. 338, reads the phrase *qujintepeoa ocalco*.

8. The MS is apparently corrupted here so read as reproduced: *qujlhuj in coiovevetzin*.

strong voice." Then they spoke to a seasoned warrior named Tlamayocatl, and then Mayeuatzin commanded and said to him: "Go forth and tell those of Cuitlauac: 'O men of Cuitlauac! Your ruler Mayeuatzin hath sent me! Behold him! There he standeth upon the small pyramid!'" And when those of Cuitlauac had heard him, they answered him: "Nay, ye have slain him!" Then he said unto them: "Nay, he is not dead! Look well upon him! There he now standeth!" And [Mayeuatzin] spoke forth: "I have not died. Let nothing injure my lip rod, my green stone [jewels], my devices!" And when he ended his speech, then a cry arose [among the Indians who were with Spaniards], whereupon there was fighting. Then they pursued [the Mexicans]. But in the market place, there at Copalnamacoyan, the battle, gradually abating, lasted long.

And once our foes of Tlilihquitepec and Atezmollan* together conferred and took note of a narrow road which led between house clusters. It was the path of a nobleman named Tlacatzin. And when our foes had already entered, then the chieftains drove them forth. And a man, a chieftain and a seasoned warrior named Tlapanecatl, whose horse was at Atezcapan, then engaged them. Our foes then quickly seized him. And the [Mexican] chieftains then rushed and went shooting arrows at our foes. Then they made [the enemy] loose the captured chieftain. But our foes then smote him in the calf of the leg, there where the leg is bled. Then [the enemy] departed; the fighting ceased.

726 **Thirty-eighth Chapter, in which is told how the Spaniards set up a catapult with which they would by trickery slay the Tlatilulcans.**

And then the Spaniards set up a catapult upon a small pyramid, in order to hurl rocks at the common folk. And when they had readied it, when they were about to fire it, much did they come circling it; much did they point with their fingers. They pointed to the common folk; they motioned there where they had assembled at Amaxac.[1] All the common folk noted with concern the Spaniards pointing with their arms, as they were about to hurl and cast it, as if using a sling on them. Then [the Spaniards] wound and twisted [the ropes]. Then the wooden beam of the catapult rose upright. But the stone would not go there upon the common folk; it only went to fall beyond the back of the market place at Xomolco.

And so, there, [the Spaniards] quarreled among themselves; it appeared as if the Spaniards jabbed [one another's] faces with their fingers. Much did they chatter. And the catapult kept tottering and swaying, and little by little stilled itself. Then indeed it could be seen that the sling was on top; very thick was the rope. Because [it was provided with] a rope, [the Mexicans] named it "the wooden sling."

And once more the Spaniards hurled [their strength] against [the Mexicans]. And all the Tlaxcallans thereupon formed themselves in rows at Yacacolco, and Tecpancalxitlan,[2] and Copalnaxacoyan. Then, there at Atecocolecan,[3] they headed all those who were besieging us.[4] Very slowly they proceeded, upright position. And the chieftains went taking their places.[4] They gathered courage, and indeed stood up as men [of war]. None swooned nor behaved like women. They said: "Come, O chieftains! Who are these little barbarians — little men of low condi-

1. In the *Anales de Tlatelolco*, "*cuna de Cuauptlan*," in the version of Barrientos, op. cit., p. 200. Cuna, op. cit., identifies it as a diminutive in the *Anales de Amaxac*, as cuna hundred cuna, N., by Códice del Canal del Norte; E., *Arco del Trabajo*; S., *Anales de Motecuhzoma* and a broken line from intersection of Tolteca and Motecuhzoma to approximately the intersection of Pedro and Jesús Carranza; and W., Jesús Carranza.

2. A *Anales* enumerating an cuna hundred cuna, N., by Códice de la Independencia; E., a line approximately along Mariscal, prolongad to Plaza de S. Juan; S., Pugibet; and W., Lázo Mayo. — *Ibid.* The contract would suggest, however, another place of the same name in Tlatelolco.

3. Seler, op. cit., p. 590, translates thus: "*In Atecocolecan liegt quasi vielleicht der Pfahlwer über die gegenüber (Abwehrpfähle), die sie umzingen (abschliessen).*"

4. The contract does not indicate whether Tlaxcallan or Mexican chieftains are meant; it may be speculated that the latter are referred to, for a parallel passage, supra, Chap. 34.

726 tion?"[6] And the chieftains kept going from one side to the other, back and forth. None stood upright nor rose straight.

(And often the Spaniards placed themselves among their enemies. They were not to be seen; as the natives were arrayed, so also they bedight themselves. They put on devices and bound on mantles over [their shoulders], in order to disguise themselves. They went hiding themselves among the people and took watchful care. When [the Spaniards] struck someone with an arrow, all crouched; all fell to the ground. There was much watching; there was alertness as to whence came and whither went the iron bolt. Well did the chieftains of Tlatilulco take care and keep good watch.)

And little by little [the Spaniards] penetrated them and laid siege to them. And at Copalnamacoyan, on the road to Amaxac, the [bearers of] shields came close to one another; they met face to face.

And there was a man whose name was Chalchiuhtepeua, who hid himself behind a wall there at Amaxac. And this one was a Mexican from Tlatilulco. And he spied a horse, in order to spear it. And when he had speared the horse, then the Spaniard [riding it] went down back of it. Then his companions quickly came forth to seize him, and then put to flight all the chieftains and lords who were with them. Then they fell in behind them in pursuit. So once again they made them come to a stand at Copalnamacoyan, where stood the wall. Forthwith each rested, and each departed and entered his house.

And once it came to pass that all who were about us, though not the Spaniards, came and assembled there at Teteuhtitlan.[7] It was yet early dawn when they took position. Thereupon they leveled over a lagoon; they filled in the body of water named Tlaixcuipan,[7] for they went about crowded together. All manner of rocks they bore; all kinds of wood, pillars, door lintels, adobes, worked corner stones, etc. They moved with much chattering, raising the dust. For this reason had they so done, that they thought and imagined that thus they could rob the common folk who were at the edge of the road, who dwelt on the border of the way which led to Tepeyacac.

6. Meaning — or surrounding? — Thelmaquipan, "probablemente en el barrio de Tolpetlac[illegible]." — Garcia, op. cit.

7. A pond (swamp) in or near Teteuhtitlan. — Bell.

And when the chieftains had beheld what new [the foe] did and intended, thereupon they deliberated as to what they would do. And when they had decided, thereupon went a boat, very carefully, which they poled rapidly. It came to a stop at the road's edge. No war device showed; it only came covered over. Another came. Just so, cautiously, they poled it forth rapidly. And once more came two boats, so making four. Then came two eagle and two ocelot [warriors]. The first eagle [warrior] was Topantemoctzin; the second, Tlacotzin. And the first ocelot [warrior] was Temilotzin; the second, Cuyuamatzin. Thereupon broke forth one ocelot and one eagle [warrior], poling their boats furiously—as if the boats flew. They went cautiously to Tetzahuiztlan, in order to intercept and cut off the advance [of the foe]. And when they had gone, once again, also, two—another eagle and another ocelot [warrior]—sped forth to hurl themselves into the midst [of the fray]. And when they had already gone, the flutes were blown, and thereupon people were robbed. And some from there approached to cut off the advance of the chieftains.

And when our foes saw this, they would have fled. Many died in the water, sank and submerged, only piled up one on another, as if no longer conscious, as if stunned, fallen, soaked. Those who in vain tried to flee, only fell between the beams. They were pulled out, it is said, completely smeared with mud, slippery with mud, well soaked and completely drenched. Very many perished; there they died in myriads. And this was the last time that there our foes, the various people [allied to the Spaniards] died in numbers. And when our foes had died, the next day was quite calm.

And thus came the Spaniards here to Amaxac. They went to and reached where the common folk had taken refuge.* They had completely surrounded us. The battle spread all around, there at Amaxac and on the road which led to Tepeyacac. Then [the Spaniards] went to and entered the young men's house named Uitzco,* for there assembled all the young men. Then they climbed up to the roof terrace. And all the common folk thereupon jumped down behind the young men's house, and then all dispersed into the water. And a great an-

726 mand warrior, a shorn one, named Uitzilhuitzin, placed himself above, on the roof terrace of the young men's house. Like a wall he now became.[10] Meanwhile, the common folk followed him a little. But the Spaniards then fell upon them and bore down on them, and thereupon beat, hacked, and pierced him. Then once more the chieftains set upon [the Spaniards], and they then quickly kessed the chieftain [Uitzilhuitzin]. Then they went to lay hands on him, but he did not, nevertheless, die. Then they went, and all was quiet.

And [the temple with] images of the devils [the Spaniards] then set fire to. They burned it.[11]

And the chieftains to no purpose came to hold their position. Yet [the Spaniards] shot no arrows at the women, but only at those who came out as men [of war]. And when all ceased, there was only a little sun.

And on the fourth day likewise it came to pass that our foes marched forth together. Wherever there were common folk, there the Spaniards moved cautiously. Very softly they kept going. And the chieftain and commanding general Temilotzin in vain opposed them. He took refuge behind a wall.
[411] As an eagle [warrior] he stepped forth; he had his iron sword with him, with which he would cut them down. But when he saw that nowhere could he do anything, then he cast himself into, and made his way in, the water. There were great war cries. Then once again the battle engulfed them. Only there did they reach. In truth, all day did the battle last.

And when it had dawned, when already it was the fifth day, once again our [Indian] foes and the Spaniards made an assault. And all who surrounded us, in truth, marched together. They were around us, hemming us in. Nowhere could any go nor proceed. All were indeed compressed. All were verily crushed and trampled. And when they had come close among us, a woman poured water upon them; she drenched their faces; she dashed water into the faces of our foes.[12]

[693] And the ruler Quauhtemoc, and the chieftains Coyoueuatzin, Temilotzin, Tepanemoctzin, Auelitoctzin the chief justice, Tlacotzin, and Petlauhtzin

12. Chimalpahin's Spanish text: "los mexicanos [illegible] a los [illegible] con el agua de las mezquitas arrojandola con las [illegible]."

then seized upon a great chieftain named Tlapalcozcatl quechtecatin, whose home was Cuetlaxo. Thereupon they accepted him, and put on him the quetzal feather cost[13] which had been the device of Axitzcatzin. Quauhtemoc said: "This device was the device of my brother, of my father Axitzcatzin.[14] Let him wear it. Let him die in it. May he gain honor before the people. May he become a portent in it. May our foes see and marvel at him."[15] And when they put it on him, he was indeed terrifying. Truly wonderful he appeared. And [Quauhtemoctzin] commanded four to aid him and be at his side. They gave him the darts[16] [and dart thrower] which were the devil's—the throwing spears with flint points.

And when they had done this, it became like a portent for the lords of the Mexicans. The ruler's vice Tlacotzin said: "O Mexicans! O Tlatilulcans! Hath Mexico been nothing—that on which Mexican rule was founded? It is said to be with the power of Uitzilopochtli, which he hurled at one. It is none other than the fire serpent, the fire drill, with which he walked, casting it at our foes—which you, O Mexicans, have held as his power of the dart. Forthwith you will aim it against our foes. You will cast it not to the earth; you will hurl it with strength at [the foe]. And if one or two will be struck—if one or two of our enemies will be reached,—it is in truth a token for us [that] yet, for a little, we shall look to favor; [that] yet our lord [the god] may desire it." Thereupon went the quetzal-owl [twilight warrior], with quetzal feathers as if parted.

And when our foes saw him, [it was] as if a mountain had burst. In truth, all the Spaniards took fright; much did he terrify them, as if they had seen in him something [inhuman]. Then the quetzal-owl [warrior] climbed up to the roof terrace. And some of our foes, who could see him, stood up. Then they forced him to turn back, and took after

13. Boturini, op. cit., p. 211: "un dardo (dardo de plumerio clase y especialidad)."

14. With Book XII was in green Dr. Anderson wrote the following comment from Pimentel, Indjo: "The word is almost illegible in the MS. Reproduction of the original (Biblioteca Nacional, Madrid, 218-220, Legislation Library, Sacramento), in connection with researches in Europe made possible by the John Simon Guggenheim Memorial Foundation, suggests that cuauhtlatoani (my mother or brother) is meant."

15. Corresponding Spanish text: "Entonces fue un acontecimiento prodigio de todos pues de los mexicanos señores de nuestra generación y aquesto de ello fue verdadero en nosotros o el hay grandeza hagar de conquer de aquel gil pulgrin en que estando y habia el señor de nuestro que se llamaba [illegible], y dice a los [illegible] que eso de estando . . . [illegible] [illegible] [illegible]

726 him. Another time the quetzal-owl [warrior] turned them back and pursued them. Thereupon he took from them the quetzal feathers and the gold [looted by the foe],[17] and then he jumped down from the roof terrace. He did not die, nor did our foes carry him off. Now also, three of our foes had been taken. At last the battle came to an end; with this, stillness spread, and no more was done. Then our foes departed. All was quiet, and nothing more took place. Then night fell.

And upon the morrow, likewise no more happened. None spoke aloud. The common folk only settled back. And the Spaniards did nothing more. They only remained still; they remained looking at the common folk. Nothing more occurred; they remained quiet, in place.

701 And here are named all the chieftains, the great men who were wise in the ways of war, who disposed [men] for battle, who assumed the burden of war: the general Coyoueuetzin, and the Tzilacatecatli Temiqtlan. These were Tlatilulcans. And those of Tenochtitlan [were] the ruler's vicar Tlacotzin and the captain of the armies Motelchiuhtzin. These are they who were the great chieftains of Tlatilulco and Tenochtitlan.

17. This is explained in the Spanish text: "salio este con un el dispuesto desde los dichosos tenjan quitado y cosas de sus enbidias."

Thirty-ninth Chapter, in which is told how, when the [Spaniards] had forced them to the wall, there appeared to the Mexicans what showed itself to be [a ball of] jasper[1] which seemed to issue from the heavens and came to view like a large coal of fire.

And when night had fallen, then it rained and sprinkled at intervals. Later at night the flame became visible; just so was it seen, just so it emerged as if it came from the heavens. Like a whirlwind[2] it went spinning around and revolving; it was as if embers burst out of it — some very large, some very small, some like sparks. Like a coppery wind it arose, crackling, snapping, and exploding loudly. Then it circled the dike and traveled toward Coyoacacco;[3] then it went into the middle of the lake there to be lost.

None shouted; none spoke aloud.

And on the next day, nothing more happened. All remained [quiet], and also our foes [so] remained.

Ca: the Captain [Cortés] was watching from a roof-top at Amaxac — from the roof-top of [the house of] Axayacatzin — under a canopy. It was a many-colored canopy. He was looking toward the common folk; the Spaniards stood crowded about him and took counsel among themselves.

And [on our side] were Quauhtemoc and the other noblemen[4] — the ruler's vicar[5] Tlacotzin, the lords' judge[6] Petlachotzin, the captain of the armies[7] Motelchiuhtzin, the constable[8] of Mexico, and the head priest;[9] and also the rulers of Tlatilulco — the

701 565 general[10] Coyonacazcatzin; the commanding general Temilotzin; the army commander[11] Topantemoctzin; the chief justice[12] Auelitoctzin; the captain of the armies[13] Uitzilinitzin; the Tlacopan ruler Uitzitzin. All of these rulers were assembled at Tolmayecan; they appeared to consult among themselves how this should be done: what we should offer as tribute, and how we should yield to [the Spaniards].

728 Thereafter only two [men] took Quauhtemoc in a boat. The two who took him and went with him were the seasoned warrior Tepuztzinoloc, and Yaztachimal, Quauhtemoc's page. And the one who poled [the boat] was named Cenyauel.

And when they carried Quauhtemoc off, then there was weeping among all the common folk. They said: "Now goeth the young lord Quauhtemoc; now he goeth to deliver himself to the gods, the Spaniards!"

And when they had betaken themselves to bring him and disembark him, thereupon all the Spaniards came to see. They drew him along; the Spaniards took him by the hand. After that they took him up to the roof-top, where they went to stand him before the Captain, the war leader. And when they had proceeded to stand him before [Cortés], they looked at Quauhtemoc, made much of him, and stroked his hair. Then they seated him with [Cortés] and fired the guns. They hit no one with them, but only made them go off above, [so that] they passed over the heads of the common folk.[2] Then [some Mexicans] took and got into a boat and guided it there to the house of Coyoueuetzin.[3] And when they arrived, then they climbed up to the roof-top, whereupon once again they slew men and many died there. But [the Mexicans] only fled. With this the war reached its end.

1. *Repeated:* the title is omitted in the MS.

2. Probably an military order, without prejudicing we know that Cortés used this opinion to impress the Indians. Perhaps this done is was to pay over the end of the war (personal communication, Rafael García Granados).

3. Seler, op. cit., p. 302, implies that they brought a cannon (*tlatlauc cuetzpal*). What appears to be the corresponding Spanish text reads: "*quando este mensajero adelante dos cosas de artillería y entraron en la casa de un principal que se llamaba Coloxuetzin.*"

4. Corresponding Spanish text: "*desde quijtos ß espantó a algunos Indios de los amigos de los españoles mensajeros.*"

5. So many: Bandelier, op. cit. CX, Interesse, Hidalgo, op. cit.

727 And all who lived in boats and [in houses] on
481 poles, and those at Tolmayecan,[6] went into the water. On some, the water reached to the stomach; some, to the chest; and on some it reached to the neck. And some were all submerged, there in the deeps. Little children were carried on the backs [of their elders]; cries of weeping arose. Some went on happy and rejoicing as they traveled crowding on the road. And those who owned boats, all the boatmen, left by night, and even [continued to] leave all day. It was as if they pushed and crowded one another as they set out.

6. Cam, op. cit., mentions Tolmayecan (Tolmayecan?) as probably the same as Ayecac.

7. Literally, of yellow bodies, the yellow ones.

All went forth about holding, by their capes, Quauhtemoc, Coanacoxtzin, and Tetlepanquetzatzin[8] — grouping only these three. [And also appeared] the ruler's vicar Tlacotzin, the lords' judge Petlauhtzin, the captain of the armies Motelchiuhtzin, the constable of Mexico, the lord priest Coatzin, the keeper Tlaçolyauel — the men who guarded all the gold.

Then they went straightway to Atlacuihuayan,[9] to the house of the chieftain and commanding general Coyoacacatzin. The Spaniards came in files; they stretched out in two rows, which went to their ends at a distance and extended far. And when they had reached the house of Coyoacacatzin, then they climbed up to the roof-top, on to a platform. Then they sat down. With a many-colored cloth they made a canopy for the Captain. Then the Marquis sat there, and with him stood Marina.

And Quauhtemoc was by the Captain. He had bound on the cape of quetzal feathers, each half of different color, with humming bird feathers, after the manner of those of Ocuillan. It looked soiled. He had only this. Then, after him, came Coanacoxtzin, ruler of Texcoco, who had bound on only a maguey fiber cape bordered with flowers and with a design of radiating flowers. It also seemed dirty. Then after him came Tetlepanquetzatzin, ruler of Tlacopan. He likewise was covered by a cape of maguey fiber, also very dirty — much soiled. Then, next, came the chief justice Auelitoctzin, and last walked Yopicatl Popocatzin, a prince. On the other side were the men of Tenochtitlan — Tlacotzin, Petlauhtzin, Motelchiuhtzin, the constable of Mexico, the lord priest Coatzin, and the keeper Tlaçolyauel.[10]

9. "Donde ahora está edificada la iglesia de Santa Lucía, aquí en el Tlatelolco" — Ibn. ibi.

10. Tlaçolyauel: the ortthe is omitted in the MS. In this passage, cuauhtlatlatl appears to be run together in the MS. Cf., however, Molina, op. cit., and Simeon, op. cit. (Alvarado).

[p. 120 is blank]

648
728

Forty-first Chapter, in which are told the words with which Don Hernando Cortés addressed the rulers of all the cities, here in Mexico, in Tenoxtitlan, and in Tlacopan, when the shields had been stilled, and [how] he questioned them as to the gold which [the Spaniards] had in haste scattered there at the Tolteca canal, when they escaped and fled from Mexico.

Ihuiz omopaulli ooc cuptitoki vncl mjtoa in tlacolli inijc qujnnanotz do hernando Cortes in jxquichtin ohuetzi ipil tlatoque in ojcan Mexico: auh teteuctli, tlacuhu, in jquac ic omomoan chimalli, in qujnnotzalitia in cuaitc teucujtlatl, in vncan qujnnanotzqujque tolteca acalooc, in jquac qujxqui, choloque mexico.

Thereupon the Marquis, the Captain, addressed the rulers. He said to them: "What of the gold which was stored in Mexico?" On this, all the gold was taken from the boats — the golden banners, the golden conical caps, the golden arm bands, the golden bands for the calf of the leg, the golden bowls, the golden discs. All [these] they had laid out before the Captain, [and] indeed all of it the Spaniards had taken up.

Then, the Captain said: "Is this all the gold which was stored in México? Have you brought all of it forth?" For our lords sought it diligently.

Then Tlacotzin spoke: "May our lord, the god, hear! That which was brought to our palace we walled up, all of it, with adobes. Did not, in truth, our lords take it all with them?"

Then Marina said to him: "The Captain saith, 'It is so. We took all of it. All was gathered together, and all was marked. And they caused us to cast away all of it there at the Tolteca canal, there where they all set upon us. They must bring forth all!'"

Thereupon the ruler's vicar Tlacotzin answered: "May the god, the Captain, hear! The men of Tenochtitlan rise not [to battle] in boats; it is not their wont. Only the men of Tlatilulco have made it their way of doing. In boats they gave battle and set forth to stem the advance of our lords. Did not in truth these of Tlatilulco take it all?"

After this Quauhtemoc spoke and said to the ruler's vicar: "What dost thou say, O ruler's vicar? Even if the men of Tlatilulco took it, were not the guilty imprisoned therefore? Did they not produce all of it? Was it not gathered together at Tlacopan? And what took our lords with them [if] not this?" Quauhtemoc pointed to the gold with his finger.

Inje omopaulli ooc cuptitoki vncl mjtoa in tlacolli inijc qujnnanotz do hernando Cortes in jxquichtin ohuetzi ipil tlatoque in ojcan Mexico: auh teteuctli, tlacuhu, in jquac ic omomoan chimalli, in qujnnotzalitia in cuaitc teucujtlatl, in vncan qujnnanotzqujque tolteca acalooc, in jquac qujxqui, choloque mexico.

648 728 Then Marina spoke to him: "The Captain saith, 'Is this all?'"

Then the ruler's vicar spoke: "Perchance some commoner took it. But it will be sought; our lord the Captain will behold it."

Then once again Marina spoke: "The Captain saith, 'Ye will find all two hundred [pieces] of gold.'" She measured off [the size] with her hands; her hands described a circle.[1]

Again the ruler's vicar answered; he said: "Doubtless some poor woman put it in her skirt. It shall be sought out. He shall behold it."

Upon this the chief justice Auelitoctzin spoke; he said: "May the lord, our lord Captain, hear! When Moctezuma yet was [alive], when somewhere there was to be a conquest, the men of Mexico and of Tlatilulco, the Tepaneca and the Acolhua, moved together. All the Tepaneca, all the Acolhua, and all the dwellers in the swamp lands — we set out together when we conquered. And when the city fell, thereupon all turned back. Each man returned to [his] city. And thereafter came the masters of the city, the conquered ones. They brought their tribute, which had become the goods of [the victors]: green stone, gold, quetzal feathers, and the other precious stones — fine turquoise; and blue cotinga feathers, and red spoonbill feathers. They offered this to Moctezuma. All together it reached there. All together, there to Tenochtitlan, came all the tribute, all the gold."

PREFACE

THE PRESENT PAPER was prepared between March and December, 1943, under the auspices of the University of California at Berkeley, while the author was a research assistant in the Department of Anthropology. The data were assembled in the Bancroft Library, under ideal working conditions. The author wishes to express his gratitude to the staff of that Library for its coöperation, and to Professors Alfred Kroeber and Carl Sauer for their critical aid. Mrs. C. A. Block, Editor of the Department of Anthropology, contributed valuable advice on the technical problems of format. As for the translations scattered through the text, the author has chosen to make them loose, being aware that translations are at best worthless toys. No amount of ingenious paraphrase can possibly supplant the original documents, to which those wishing to investigate the problems of the paper will turn. (Certain emendations of the text have been made in Mexico during the succeeding five years.)

The Empire of the Culhua Mexica . . . . . *facing* 144

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

I. INTRODUCTION

Nature of the Present Study

The present paper is the first part of a study of the empire that Cortés invaded when he set foot at Vera Cruz in 1519. This is the empire wrongly called "Aztec"—a term which the writer has considered elsewhere[1] and for which he proposes to substitute the name "Culhua Mexica." This and a second paper, to be published later, deal with the geographical extent of the Empire of the Culhua Mexica and with its division into tributary provinces. All towns that can be proved to have been subject to the Valley of Mexico in 1519 will be dealt with in the two parts of this study of Culhua Mexica. Later and more detailed portions of the larger study consider this vast Empire chronologically: how and when it came to reach its final dimensions, who dominated it at the outset and who toward the end, and so forth. The present mapping of the Empire of the Culhua Mexica is a necessary preliminary to the historical studies (in the form of local histories) which are to follow, and which are the writer's chief aim.

Great exactness is possible in mapping the Empire (see map at end of book), because of one monumental document, the *Matricula de Tributos;* its bibliography is considered in the second section of this Introduction. It is the original native tribute list, in which the payment exacted from the provinces was recorded; it is the official bookkeeping ledger of the Empire, a hardheaded, realistic document. The *Matricula* is shaped like a book, in which hieroglyphs for various towns—ranging in number from two to nearly thirty—of a province are

[1] R. H. Barlow, "Some Remarks on the term 'Aztec Empire,'" *The Americas* (1945), 2: 344–349.

This empire was the product of a Triple Alliance among three tribes settled in the Valley of Mexico. These three tribes differed in religion, in customs, and doubtless in many other things. Their names were the Tepaneca, the Acolhuaque, and the Mexica. (The Mexica were subdivided into Tenochca and Tlatelolca.) The chief towns of each during the period of the Empire—roughly speaking, the century before the Spaniards came—were Tlacopan [Tacuba], Texcoco, and Mexico-Tenochtitlan (with Mexico-Tlatelolco active from 1428 to 1473). In 1519, the end of the native period, the Mexica of Tenochtitlan had quite overshadowed their allies, so that it is proper to call the Empire of the final period—which is the period of the present study—the Empire of the Mexica or Mexicans. But more exactly, it should be called the Empire of the Culhua Mexica, for reasons I have set forth in the above-cited paper. It is hopelessly erroneous to call it the Aztec Empire, for although the name Aztec was once applied to the Culhua Mexica, at the start of their history, they had discarded it long before founding their capital city.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

114 painted along the outer and lower margins of the page, the rest of the
128 page being taken up by the items of tribute for which these towns
[211 were jointly responsible. The place names on a given page prove to
65] be geographically contiguous on modern maps, and so it is evident that the towns were regarded as a unit, as all having something in common. I have called each region thus indicated a "province," partly in order to provide some territorial division, but also because these groupings of towns were in some measure expressions of former political or linguistic units. Most of the Matlatzinca-speaking towns, for example, cluster on a page of their own; moreover, they were all conquered in a continuous campaign of a few years. These provinces (indicated on the map by large arabic numerals) I have named after the introductory glyphs, assuming the first glyph on each page to represent the most important town. Other available sources justify this. In another source, for instance, in the province I have named Tepequacuilco, Tepequacuilco is stated to be the "presidio de gente de guarnicion que cobravan los tributos: y recogieron de toda la cuisca [Cohuixca]";[8] in that which I have named Coayxtlahuacan, Coayxtlahuacan is called "donde el dicho Munteçuma tenia puesta su frontera de gente de guerra."[9] The borders of the provinces as they existed in 1519 have been commented on in detail where these were adjacent to non-Mexican lands.

Most of these invaluable place glyphs of the *Matricula* could be read even if they were all we had, and they are of course the final authorities. The task of reading them, however, is greatly simplified by the annotations they bear; the *Matricula* itself contains scattered and not always reliable identifications in roman letters, and the copy of the *Matricula* in the *Codex Mendocino* contains a complete series of highly reliable ones. In order to have some norm for spelling, I have everywhere followed these *Mendocino* versions. There are objections to this procedure—which gives us "Tuluca" for what is better rendered "Tolocan,"—but it shows how one Indian pronounced all the names of the Empire before the corrupting European influences set in.

[8] *Relación de Iguala* (1931), p. 223.

[9] *PNE*, 4: 165; 4: 198 agrees. Likewise, Tochpan (Tuchpa in *Mendocino*) has seven towns, and Ixtlilxochitl (*Obras historicas* [1892], II: 197) says that "La gran provincia de Tochpan se dividía en siete provincias." The fact that the initial glyph is often the only one identified in roman letters in the *Matricula* is also taken into account.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

I have included a certain amount of related ethnographic material which has appeared in the course of accumulating data on place names and locations. Names for certain stretches of territory, names of language groups (these two often intertwined), reasons for such names, and occasional remarks on customs or gods form the main part of this supplementary material, which shows the great diversity of the Empire. (This diversity is still present: even today, a traveler in Mexico can see twenty countries in one.)

Here, however, the supplement stops. I have reluctantly excluded every scrap of the historical sections originally written to accompany these provinces. By suppressing an approximate history now, I can give an accurate history later. Nor has it been possible here to touch on the question of government and administration of tribute,[4] and on the topics of the motivations and formulae of native warfare, all of which need reëxamination.

In view of the nature of the authority for this map of the Empire of the Culhua Mexica—a tribute reckoning—it has, however, seemed appropriate to add some data on tribute. These data come chiefly from two sources: the *Matricula*, which gives the tribute from provinces as units, but not from their component towns; and the geographical *relaciones* of the 1580's, which often record the kind of tribute from a given town. Here again, I have omitted incidental materials in order to focus on the map. I have treated the *Matricula* tribute data in a summary fashion,[5] but have given all other tribute information in full.

[4] Manuel Moreno, *La organización política y social de los aztecas* (1931), gives something on these points.

[5] *I.e.*, by simply presenting whatever the Spanish annotations of the *Mendocino* copy say (for these give the frequency of payment, which is not deducible from the *Matricula* pictures alone), and by correcting a few errors in regard to quantities of goods. This method leaves much to be desired. A real study of the *Matricula* tributes would involve that document and its two copies—the checking of all items in all variant drawings and annotations from different hands, with special note taken of the quite unexploited annotations in Náhuatl on the *Matricula;* the investigation of native measurements and weights; the detailed itemization of various styles of mantles, skirts, and warriors' costumes portrayed (each of which has a name and a symbolism and many of which are badges of certain social categories); the question how often payment was made and into whose hands, where it was stored, and many other matters. Until such a study is prepared, the student should consult Cooper Clark's edition of the *Mendocino*, supplementing this with the works of Eduard Seler, especially his *Altmexikanischer Schmuck und soziale und militärische Rangabzeichen*. On the frequency of tribute payment, some observations have been made by R. C. E. Long, *The Payment of Tribute in the Codex Mendoza* (1942), and by R. H. Barlow, *The Periods of Tribute Collection in Moctezuma's Empire* (1943). Those interested in place glyphs and etymologies should see Peñafiel's imperfect, but still not superseded, *Nombres geográficos de México* (1885).

The Matricula de Tributos

114 En estos Fragmentos se ve el más auténtico testimonio de la opulencia, grandeza, y Majestad de este Imperio Mexicano.

—Archbishop Lorenzana

The map the publication of which is begun in this work is based primarily on one document. Since the relationship of this document to its copies and editions has not been worked out before, it is proper to turn our attention to bibliography.

The *Matricula de Tributos*[6] is a folio manuscript, painted on coarse native paper, arranged like a European book. It is preserved in the Salon de Codices of the Museo Nacional de Arqueología de México and bears the exhibit number 52. Originally it must have contained more than eighteen folios, although today it has dwindled sadly.[7] On both sides of each of these folios are painted the hieroglyphs of the towns which were subject to the Triple Alliance of Mexico, Texcoco, and Tlacopan, as well as those of the tributes they paid.[8] The *Matricula* was probably made after 1511 or 1512, as I have remarked elsewhere.[9] Its European format hints that it may have been painted for Cortés, who soon had it in his hands and was learning the likeliest fields for pillage. Bernal Díaz tells us: "En los libros de la rrenta de montezuma miravamos de donde le trayan los tributos del oro y donde avia minas y cacao y rropa de mantas y de aquellas partes que viamos en los libros y las quentas que en ellos tenian montezuma que se lo trayan queriamos."[10] Afterward it doubtless served as a touchstone for taxability. When the first generation of unhappy mestizos was about come of age, the Viceroy Mendoza had the *Matricula* copied as part of the compilation made to show His Sacred and Caesarian Majesty what

[6] Named by Boturini in his *Catalogo del Museo Historico Indiano* (1743).

[7] Fernandez, *Monumentos del arte mexicano antiguo* (1890), p. 69, interprets the number 35, written on the last sheet of the manuscript as it exists today, to mean that it had 35 pages originally. This, however, is merely the number given in the Boturini inventory.

[8] That the *Matricula* contained records of the tributes of both Mexico and Texcoco is clear from the inclusion of the provinces of Quauhnahuac and Tlalcoçauhtitlan, with certain subordinate towns which were specifically subject to Texcoco, as Ixtlilxochitl (*Obras históricas*, T. II: *Historia Chichimeca* [1892], p. 89) and other sources inform us. It also includes the province of Xilotepec, which with its towns was subject to Tlacopan specifically ("La orden que tenian los indios ... ," *ENE*, 14: 145–148).

[9] Anderson and Barlow, "The Maize Tribute of Moctezuma's Empire," *Annals of the Missouri Botanical Garden* (1943), 30: 414–415.

[10] *Historia verdadera de la conquista de la Nueva España* (1904), II: 144.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

New Spain was like. This copy (which is not generally realized to be a copy)[21] preserves for us the manuscript as it stood in the 1540's. It is possible that a leaf or two had been lost before that date. Since four leaves have been lost since then, this copy is very precious. This *Mendocino* copy shows that the *Matricula* had thirty-six pages and somewhat more (a matter which cannot be commented on here), that is, eighteen leaves *plus*, at that time. The military history section of the *Mendocino* was also copied from the *Matricula*, where only a scrap of it survives. Probably the ethnographic section of the *Mendocino* was the only one painted especially for it. The manner in which two leaves of the *Matricula* were lost completely and two were carried off is noted below.

Sometime in the sixteenth century the manuscript was annotated unsystematically in Náhuatl. This must have been after the *Mendocino* copy was made, for the latter does not take cognizance of these annotations, but provides others.[22]

The *Matricula* disappears in that neglected century of consolidation, the seventeenth. In the first half of the eighteenth, however, it came into the hands of Lorenzo Boturini, the Italian Guadalupe enthusiast, whose immeasurably rich collection embraced almost every document on which our knowledge of ancient Mexican history is based. In the

[21] Orozco y Berra suspected that it was. The preface to the 1925 del Paso edition says (*Códice Mendocino*, p. vii): "No se sabe si es obra original de los indios instruidos comisionados especialmente por Mendoza, o copia de distintas pinturas antiguas colegidas en el códice." And even that astute bibliographer Gómez de Orozco is skittish: "pudo ser la fuente [del Códice Mendocino] el codice llamado Matricula de los Tributos ... u otro muy semejante, pues que existen algunas variantes entre este y el codice Mendocino" ("¿Quien fué el autor material del códice Mendocino?" *Revista mexicana de estudios antropológicos* [1941], 5: 44). In the absence of the much-needed variorum edition of the *Matricula*, but with the related manuscript and editions described here—and lacking space for more extended discussion,—one can only dogmatize. The tribute section of the *Mendocino* is unquestionably a copy of the *Matricula*. The only differences between the pictures of the two are minute. Sometimes two pages in the *Mendocino* are devoted to material which occupies only one page in the *Matricula*, and in the province of Çihuatlan the town of Xolochiuyan has been placed out of sequence by the *Mendocino* artist. A few erasures have occurred in the *Matricula*, leaving gaps and traces of the erased material. Such variants as these are not worth itemizing further.

[22] The names of the warriors' costumes, for example, are given in the *Matricula* annotations, but are lacking in the *Mendocino*. The *Matricula* gives "Tlacotepec" in Tuluca Province, whereas the *Mendocino* gives a probably erroneous "Mitepec." The *Matricula* gives "Panchimalco" in Qusuhnahuac; the *Mendocino*, the certainly erroneous "Chimalco." As a whole, however, the town names of the *Mendocino* are highly accurate; these minor slips are cited to show that the *Mendocino* annotator saw a still unannotated *Matricula*.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

inventory made of his papers, July 15, 1745, it appears as No. 35 of "Ymbentario 2°."[32] It also figures in the printed catalogue of the following year, § VII, No. 9, where it received the name of "*Matricula*."[33]

A very inexpert copy of the *Matricula*, now bound with it, was made about this time. It appears in the "Ymbentario 2°" as No. 36,[34] in the printed catalogue. This copy does not fully reproduce the initial page, which had become nearly effaced. Four pages of this wretched copy were published by Peñafiel, that is, those corresponding with the two leaves carried off to Philadelphia—an event noted below.[35] The *Matricula* suffered the fate of all Boturini's collection, being taken as part of the evidence of his crime of collecting funds to make a crown for the Virgin of Guadalupe. It lay in one of the secretarías of the Gobierno del Virreinato until 1770, when Archbishop Lorenzana published the first of the editions it has suffered.[36] By Boturini's day (mid-eighteenth century) the manuscript had been reduced from the eighteen leaves plus of *circa* 1540, to sixteen leaves in the Lorenzana publication. The losses were the leaf containing the provinces of Tlachquiauco (recto) and Tochtepec (verso) and that containing Axocopan (recto) and Atotonilco (verso).[37] Lorenzana's edition is imaginatively unfaithful, being a series of lopsided copper-plate engravings. One page is so wretchedly copied that the "artist" has a vacant space left, which he plugged up with a cherub blowing a trumpet—a very curious item to find in Moctezuma's tribute list. This edition includes the Náhuatl annotations, as well as the Spanish translations which certain of them had acquired in the meantime.

---

[32] "Este, es otra Matricula, como la antezedente en el mismo Papel de Pasta, todo figurado con caracteres, en [*sic*] antiquissimo, no tiene por donde se perziua a que Provincia toque. en diez y seis Fs" ("Inventario de los documentos recogidos á D. Lorenzo Boturini, 15 July 1745," *Anales del Museo Nacional ... de México* [1925], Epoca IV, T. 3).

[33] "Original. Una Matricula de Tributos, que se pagaban a los dos Reynos de Mexico, y Tlatilólco por las respectivas provincias subditas. Es de 16. fojas de papel Indiano, aunque le falta algo del principio, y fin, y se pintan en ella los lugares tributarios, y las especies de los tributos, que pagaban en frutos, y otros generos" (*ibid.*).

[34] "Esta es copia del antezedente, se halla en Papel de Marca mayor en diez y seis fojas" (*ibid.*).

[35] Peñafiel, *Monumentos del arte mexicano antiguo* (1890), pls. 256–259.

[36] "Fragmentos de un Mapa de Tributos, ó Cordillera de los Pueblos ... " in Lorenzana's edition of Cortés, *Historia de Nueva España* (1770), pls. following p. 176.

[37] Not Atotonilco el Grande (see p. 64), which is on p. 8 of the manuscript as it exists today.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Sixty years after the appearance of Lorenzana's edition, the original *Matricula* suffered further loss. Two folios were detached by Poinsett, the American minister of Iturbide's day, who carried them off to Philadelphia, along with a large collection of Mexican antiquities on which there is no report available. One of these folios, half torn away since Lorenzana's edition, contains the provinces of Tlatelolco (recto) and Petlacalco (verso). The other contains Tlatlauhquitepec (recto) and Tuchpa (verso).[*] With this final mutilation, the document was left in its present state, except for a binding which it acquired sometime in the nineteenth century. It has been in the Museo Nacional for many decades, where Sr. Fernando Gamboa has recently devised a setting worthy of it, amid a welter of gold nose-plugs, green feathers, cacao, paper, and the like.

In view of all these mutilations, I wish to state that I cite the present pagination throughout.

At the end of this same nineteenth century, in which the *Matricula* was at first seriously maltreated, the nobility of the old document was appreciated, and a lithographed edition in heightened colors was published by Peñafiel. This edition partakes of the usual defects of "official" scholarship of the Batres Era and omits[**] the annotations in European writing. As recompense, the editor had the prices which he thought the tribute would bring on the open market added up, and published this in many solemn tables.

With the recent recovery of the Philadelphia pages, the story of the *Matricula* is complete. As there has never been a usable edition of it, I have had to work with diminutive photographs of the original. A good edition and a serious commentary on this document are much needed.

[*] They were published in the *Transactions* of the American Philosophical Society (n.s. [1893], Vol. 17, following p. [62]), in whose possession they and the other antiquities were left. Recently they have been recovered but not restored to their place in the manuscript.

[**] As in the unpardonable cases of the Codices Colombino and Sánchez Solís.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

II. THE TARASCAN FRONTIER

128 Because there were many provinces in the Empire which it is our purpose to delimit, some few grand divisions seem advisable. These have been made in a rather arbitrary way, with varying criteria. In certain regions it is possible to point out a particular zone as the special sphere of influence of some one or another member of the Triple Alliance. The six provinces described below, however, have been grouped on the basis of their common enemy and peril, the Purépecha or Tarascans, against whom they formed a long frontier. Brand has published a useful map of the Tarascan dominions and their fortified towns facing the Mexica, from the Río de las Balsas north.[1]

1. Çihuatlan

SOURCES OF THE MAP

635 114 On the sixteenth page of the *Matricula* and on folio 38' of the *Codex Mendocino* appear the twelve towns of the most westerly province of the Empire we are about to depict. This province, now the "Costa Grande" of Guerrero, extends west of Acapulco to the outlet of the Río de las Balsas. In the *Matricula*, seven of the towns are identified by annotations in roman letters; in the *Mendocino*, all are. The province of Çihuatlan was in a region which is wretchedly mapped to this day, where half the place names seem to have disappeared. If it were not for a "Relación de los pueblos que visitó Gaspar Xuarez en la provincia de Çacatula," of the mid-sixteenth century, the present map would scarcely be possible. There is supplementary information in the relación of Zacatula itself, dating from the 1580's, which the writer has published from a nineteenth-century copy—the original remaining unpublished and apparently unpublishable, for some mysterious reason known only to its present guardians.

635 114 128 Since this relación was available only after the printing of the map, two or three inconsistencies between map and text have inevitably resulted.

The "Millionth Map" of the American Geographical Society, sheet

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

"Ciudad de México," has been used as the skeleton of the present map; the filling-in has come largely from Xuarez' report. Towns which have been identified are given below, the left-hand column containing their names as written in the *Codex Mendocino* and the right-hand column containing the equivalents when present on the modern map. The number following each name indicates the location of the town on the accompanying map (at the back of this book). A question mark in parentheses means that the location of the town is uncertain.

MENDOCINO	MILLIONTH MAP
Apancalecã (?), 2	[Missing]
Coyucac, 8	Coyoquilla
Nochcoc, 10	Nuxco
Panotlan, 9	[Missing]
Petlatlan, 6	Petatlán
Xihuacan, 5	[Missing]
Xolochiuhyan, 7	Jolochuca
Yztapan, 3	[Missing]
Çacatulan, 1	[Missing]
Çihuatlan, 9 [*sic*]	[See Remarks on Towns]

Aside from doubtfully identified Apancalecan, two pueblos of the *Mendocino* list remain entirely unidentified. These are Colima and Coçohuipilecan. This Colima can hardly be the Colima of the modern state of the same name, because of the distances involved. Coçohuipilecan, however, appears as "Coçohuipillan" in the conquest list of Ahuizotl, among other names of this province.

For reasons explained below, to these towns from the *Matricula* and its *Mendocino* copy may be added the pueblos of Acapulco (13), Anecuilco (12), and Citlaltomaua (11).

REMARKS ON TOWNS

Acapulco, like Coçohuipilecan, is one of the towns conquered by Ahuizotl. Its absence from the tribute list is due to its slight importance in aboriginal days—to nonseafarers the celebrated port facilities meant nothing at all. It is even possible that the tribute list may refer to an Acapulco near Zacatula, mentioned in the relación of that town, in which case Yopitzinco may have extended farther west along the coast.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 *Anecuilco* (near Çeuctla) is added on the authority of the sixteenth-
[114] century relación of this and of the following town. (These two are
131 included in the province of Çihuatlan somewhat arbitrarily, in the interest of symmetrical disposition.) Anecuilco and its companion Citlaltomaua "tributaban al rrey que era de Mexico que se llamava Monteçuma."[3] It lay behind the high mountains east of Citlaltomaua
[491] (whose location is considered below), eight leagues of "muy mal
[133] camino ... de muchas bueltas" distant.[4] The river upon which it was situated sprang from the sierra of Tlacatepetl, taking the name of Xiquipila in its lower reaches from another pueblo on its banks, and emptying in the southeast into the "playa y boca que dizen de Nagualan." A tributary of this river was called the Nexatl.[5] All of these names save that of the sierra Tlacatepetl have disappeared. However, since Citlaltomaua lay on the Río Coyuca (as appears below), this other river springing from the Tlacatepetl must be the present Río Papagallo. The Río Sabana, which is the only other possibility, has a source nearer the coast than the sierra mentioned. The rest of Anecuilco's location depends on that of Citlaltomaua.

Apancalecan may be either the Atenchancaleca of Gaspar Xuarez,[6] two leagues from "the Villa" (Zacatula), or Echancaleca (No. 863 of the same document), one league from the Villa. (All three names
[103] mean "Place of the Owners of Houses by the Sea.") In any case, like
[101] Zacatula, it appears too far east on the accompanying map.

Citlaltomaua was eight leagues from the sea, seven from Coyuca
[491] de Benítez (d) and seventeen "leguas de muy malos caminos de Acapulco, azia el sueste." It lay to the south of the high and broken mountains of the Tlacatepetl. Two leagues below it a river was formed which emptied "en la mar del sur en la playa que dizen de Coyuca." An estancia of Citlaltomaua, the only one of these names (except for the sierra of Tlacatepetl) which can be found today, lay about "una legua hazia el nascimiento del sol." This was called Tepetiztla (c)[7] and appears as "Tepetixtla" on some maps today, others giving it as "Tepetlixpa."

[7] *PNE*, 6: 155–159.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Coyucac is probably not the Coyuca de Benítez of today, but the one 132
described by Xuarez as twenty-five leagues from Zacatula, near the 131
sea, and adjacent to Axapoteca[7] (which in turn is adjacent to Xolochiuyan and Panotlan, *q.v.*).[8] This is the only Coyuca he describes in his report on his tour of the coast. Today it is called Coyuquilla.

Nochcoc is certainly the present Nuxco, also described by Xuarez.[9]

Panotlan is mentioned by Xuarez both as "Panutla" and as "Pamutla."[10] He places it at thirty leagues from the Villa and one league from the sea, confining with Çihautlan and Nochcoc. This rules out the present Pantla, west of the Río Ixtapa.

Petlatlan is one of the few surviving names, appearing today as Petatlán. It is given by Xuarez as twenty leagues from the Villa.[11]

Xihuacan has vanished. Xuarez places it nineteen leagues from the Villa and adjacent to Petlatlan and Cihuatanejo—both well-established places. He adds, "tiene en su termino una laguna de mucha pezqueria y donde se haze sal en cantidad."[12] This salty lagoon suggests the Salinas de Potosí, southwest of Petatlán on the "Millionth Map."

Xolochiuhyan, described by Xuarez as "Solochuca" and also as "Cholochuca"[13] and placed twenty-two leagues from the Villa, near the sea, has become Jolochuca of today, another of the towns of this province which may be definitely localized.

According to the writer's chronological study and the "Relación de 175
Zacatula," Xolochiuhyan was the scene of Ahuizotl's first breakthrough to the coast and became his "frontier"—against whom, is doubtful.

Yztapan is given as the name of two towns by Xuarez. One[14] belonged to the encomendero, Anton Sánchez the younger, and was seventeen leagues from the Villa. The other, belonging to His Majesty, was thirteen leagues from the Villa,[15] close to the sea, and two leagues from the "Puerto de Çiguatanejo." Thus the pueblo belonging to

[7] *PNE*, 1: No. 900.
[8] *PNE*, 1: No. 899.
[9] He gives it as 33 leagues from the Villa. *PNE*, 1: No. 903.
[10] *PNE*, 1: Nos. 900 and 902.
[11] *PNE*, 1: No. 896.
[12] *PNE*, 1: No. 895.
[13] *PNE*, 1: Nos. 897 and 898.

[15] *PNE*, 1: No. 892.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 Sánchez was right at the Bay of Cihuatenejo, and it appears there in
131 a manuscript map of *circa* 1760.[36] The other pueblo, His Majesty's, appears on the "Guerrero State Map" of the atlas of the Secretaría de Agricultura y Fomento, being situated on the Río Rincon. By means of the Salinas de Camotlán, which appear on both this latter map and the "Millionth Map," we see that this Río Rincon is the Río Ixtapan of the "Millionth Map," though the pueblo is omitted here. It is this Ixtapan belonging to His Majesty which has been selected as probably identical with the pre-Hispanic town, both because it gave its name to the Río and Punta de Iztapa (a), a promontory which may be found on most maps, and because it was reserved for His Majesty, a fact implying a special desirability and importance.

Çacatulan lay one league south of modern Zacatula, near the mouth
[101] of the Río de las Balsas. (On the accompanying map, it appears too far east.)

Çihuatlan (Çiguatlan de Salzedo and Panotlan), which gave its name to the province, is missing from all available maps. It might have been any of three vanished towns, but the one which seems most probable is Çiguatlan de Salzedo. This lay thirty leagues from Zacatula, near the sea, and bordering Pamutla and Nusco—the modern Nuxco, near Tecpan. Çiguatlan and Panutla, or Pamutla, lay on the same river five leagues from Tecpan.[37] Judging by the distances east of Zacatula assigned to other localizable towns (Jolochuca, 22; Coyuca—Coyuquilla—28; Nuxco, 33; and Tecpan, 35), this river is the modern San Luís. Çiguatlan de Salzedo may be San Luís de la Loma today. In any case, according to the relación of Zacatula, Çiguatlan was divided from Panotlan only by a river ("entre estos dos pueblos está el río"). For that reason, it has been given the same number, 9.

Çiguatlan de Salzedo lay right in the middle of the province, which is the writer's reason for identifying it as the old cabecera, despite the claims of two remoter homonyms.[38]

[37] "Relación de Zacatula," *Tlalocan*, 2: 261; *PNE* (*Suma*), 1: No. 901.

[38] The other possibilities are Çigua (*PNE*, 1: No. 864) and Çiguatlan de Su Magestad (*PNE*, 1: No. 883). Çigua extended between Zacatula and the sea. Çiguatlan de Su Magestad lay seventeen leagues from the Villa and four from the sea. (It bordered

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

Inhabitants and languages.—There is little material available on the languages, although Zacatula is said to have been "idioma por si,"[18] and in the northeastern prolongation Tepuzteco was spoken by the people of Citlaltomaua and Anecuilco. The inhabitants called themselves Tepuztecas, which meant "people from a place of abundant copper."[19] Other Tepuzteco villages are noted in the section on Tepequacuilco, below. It will be observed that this Tepuzteco is adjacent to the equally unknown Yope. In Tepetiztla and other near-by places, however, a tongue that was not Tepuzteco was spoken.[20] Between the western and eastern extremes of this province there may well have been intrusions of Tarascan and Cuitlatec, presumed to have been spoken along the northwest and northeast, in territory extending as far as the borders of Tepuzteco. (It is reported that there was a region of mingled Cuitlatec and Tepuzteco five leagues west of Citlaltomaua.)[21]

Besides Tepuzteco and Cuitlatec, a mosaic of vanished languages underlay the (pre-Mexican) Nahuatl of the province, according to the "Relación de Zacatula." The data of this relación are presented acceptably on Brand's map.

Of Cuitlatec a few fragments have been preserved, owing to the initiative of P. R. Hendrichs. It is definitely stated that this language was spoken in Axochitlan, and it still survives faintly in the memory

---

Coyutla and Piquitla [*PNE*, 1: No. 877]; the latter lay one and one-half leagues from the sea and fourteen from Zacatula, in the mountains of southern Michoacan). Against Çiguatlan are two facts: It lay at the far border of the known towns of the province, and it had only eleven Indians in Xuarez' time. However, the Conquest was severe and it did join colonially important Zacatula and the vast archaeological zone of Melchor Ocampo (*Tlalocan*, 2: 259, notes 3 and 4). Against Çiguatlan de Su Magestad is its even greater distance from the rest of the known province. However, it was obviously an important town, since it was set aside for the Crown, and the colonial province of the Motines de Zacatula, according to the relación, reached nearly to Pómaro, Michoacan. Cihuatanejo itself is of course a fourth possibility, since the *-ejo* ending is Spanish. The whole problem is one which cannot be solved dogmatically at present.

[19] "'Jentes que biniero de algun lugar de muncho hierro' o 'jentes de hierro'" (*PNE*, 6: 158). Cf. glyph of Tepoztlan (Morelos): a copper hatchet.

[20] *PNE*, 6: 158.

[21] In a town called Chiantepec, Cuitlatec territory began, "aunque entre ellos hay pueblos que hablan la misma lengua tepuzteca" (*PNE*, 6: 165).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

197 of a few old people of Totolapan (San Miguel). According to the "Relación de Citlaltomáua," the area in which Cuitlatec was spoken extended in the southeast as far as vanished Chiantepec,[*] and fragments have been recorded by Weitlaner in coastal Atoyac.

635 *Provincial borders in 1519.*—The borders of Çihuatlan are as unclear as its linguistic features. Zacatula must have represented approximately the westerly outpost. Somewhere in the pathless mountains all along the north of Çihuatlan was the border between this province and the [101] Tarascans and Cuitlatec. (The Cuitlatec seem to have been an entity distinct from both their powerful neighbors, Mexican and Tarascan.) A slender link through Otlatlan (modern Otatlán), in the fellow-tributary province of Tepequacuilco, bound Çihuatlan to the Empire, and to the east lay the never-subdued Yopes.[**]

TRIBUTE

651 In the records of tribute presented for this and the following thirty-seven provinces, the frequency of payment is indicated as follows: one asterisk, annual; two asterisks, semiannual. The few quarterly payments ("de ochenta en ochenta días") are noted.

Tribute of the whole province.—According to the *Matricula* page and its copy in the *Mendocino,* the following items of tribute were exacted from the province of Çihuatlan:

CLOTHING**

[291] 1,616 bundles[***] of large orange mantles
2,400 bundles of large mantles of "twisted" cloth

FOOD**

[245] 80 loads of cacao bermejo

OTHER GOODS**

[248] 400 bundles of cotton
[136] 800 red seashells, like scallops

[*] See the preceding note. On Cuitlatec see Hendrichs, "Un estudio preliminar sobre la lengua cuitlateca de San Miguel Totolapan, Guerrero," *El México Antiguo* (1939), 4: 329–362; Weitlaner, "Beitrag zur Sprache der Ocuilteca," *ibid.*, pp. 297–328, notes; and McQuown, "La fonémica del cuitlateco," *ibid.* (1941), 5: 239–254.

[**] See section on Tepequacuilco, below.

[***] The *Mendocino* résumé, in Spanish, has been followed throughout this study as a convenient guide on tribute. There are slight inaccuracies in the version it gives of numbers, however; the figures representing single units are consistently overlooked. Here I have corrected the figure from the erroneous "1,600."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Tribute of the component towns.—In view of the poor documentation on this whole province, all that can be gleaned concerning the tribute of the component towns is that Anecuilco and Citlaltomaua gave slaves, who were, of course, captives taken in border skirmishes (as noted in the tribute list for Zompanco in the province of Tepequacuilco), mantles, and gold dust.[20] 651

2. Tepequacuilco

SOURCES OF THE MAP

On the fifteenth page of the *Matricula,* copied as folio 37' of the *Codex Mendocino,* are listed the tributary towns of a province situated in what is now north-central Guerrero. They are headed by Tepequacuilco, which is the only town identified in roman letters in the original document, although the *Mendocino* copy identifies all. There are fourteen towns listed in the copy; the original, however, lacks the glyphs for Teloloapan and Chilacachapan, which have been mysteriously erased. The American Geographical Society's "Millionth Map," sheet "Ciudad de México," has served for the reconstruction of this province. Original and present place names appear below: 635 114 103

MENDOCINO	MILLIONTH MAP
Alahuiztlã, 21	Alahuistlán
Atenanco, 8	Atengo del Río
Cocolan, 13	Cocula
Cueçalan, 7	Cuetzala
Chilacachapã, 12	Chilicachapa
Chilapan, 4	Chilapa
Huitzoco, 16	Huitzuco
Ohuapã, 6	Oapan
Oztoma, 19	[Missing]
Teloloapan, 11	[No change]
Tepequacuilco, 15	Tepecoacuilco
Tlachmalacac, 18	Tlaxmalac
Ychcateopã, 20	Ixcateopan
Yoallan, 17	Iguala

All these towns have been located. To them we may add a series of border towns of lesser tributary importance, and therefore omitted 635

[20] "Al rrey que era de Mexica ... le dauan esclavos e mantas e oro en polvo que sacauan y lavaban de los rrios a ellos cercanos." It is said, absurdly enough, that "los esclavos que ellos dauan al dicho Montecçuma eran para que los dichos Mexicanos comyesen" (*PNE,* 6: 158).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 from the *Mendocino*. These lay along the insecure west, where memories of internecine strife mingled with that of the prevailing war against Michoacan. The relaciones made to Philip II in the 1580's [103] authorize the addition of these six towns: Otlatlan (1),[27] now Otatlán; Tenepantla (9), now Tlanipatlán;[28] Tetela (5),[29] now Tetela del Río; Tlacotepec (2);[30] Totoltepec (10);[31] and Zompanco (3), now Zumpango del Río.[32]

[175] Tonalli imoquetzayan (22)—a conquest of Tizoc—seems to be the modern Tonaliquizaya, and Brand's map adds Tlatlaya (23) as a Mexican frontier post.

REMARKS ON TOWNS

632 *Atenanco* is one of the vacillating name forms like the equally common "Tetela." It is described, not very helpfully, in the sixteenth century, as being "junto a Taxco."[33] Though the "Millionth Map" gives it as "Atengo del Río," the Agricultura y Fomento atlas gives "Atenango del Río" in the same location. Moreover, a sixteenth-century relación[34] gives Atenango as northeast of Huitzoco.

Oztoma no longer exists, but colonial "Oztuma," which stood near the original town, left a relación which helps to locate it,[35] and a modern investigator informs us that the site is "located twenty-three miles west of Teloloapan, Guerrero, in the municipality of Acapetlahuaya,"[36] names which appear on the "Millionth Map."

Totoltepec is a ubiquitous and trouble-making name. There were famous homonyms, especially, in Hidalgo and southern Oaxaca, which are constantly confused. Del Paso y Troncoso sought to avoid ambiguity among the many Totoltepecs, ancient and modern, by calling

[27] "Eran de Moteçuma ... y le trebutavan" (*PNE*, 6: 128).

[28] *PNE*, 6: 144: "los sujetaron los mexicanos."

[29] *PNE*, 6: 133: "Le serbian [al rey de México] en la gerra que tenyan con los de Mechoacan y con los de Ajuchitlan."

[30] *PNE*, 6: 123: "Un rrei de México les bino a conquistar y allanar, con los quales tuvieron su gerra asta que los conquistaron, y Moteçuma envió un capitan ... para que los gobernase."

[31] *PNE*, 6: 149: "[En] tienpo del rrey de Mexico llamado Ajayacatzin tuvo gerra con ellos hasta que les sujeto."

[32] *PNE*, 6: 317: "Estavan subjetos a Montecçuma."

[33] *PNE*, 1: No. 90.

[34] *Relación de Iguala* (1931), p. 224.

[35] *PNE*, 6: 113: "En otro tiempo estubo poblado en un peñol ques enespunable y muy fuerte."

[36] Lister, "Cerro Oztuma, Guerrero," *El México Antiguo* (1941), 5: 210. See also Hendrichs: "¿Es al Arco de Oztuma de construcción Azteca?" *ibid.* (1940), 5: 142–147.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

the one we refer to "Totoltepec de Guerrero," but alas! there are two even in Guerrero, the other being an estancia of Ayutla, now called Tutepec."

Yoallan is the conspicuous variant in our list of names. This has become the modern Iguala. In the *Relación de Iguala* of 1579 we read: "Iguala en lengua castellana quiere decir escuridad."[a] "Escuridad" (*oscuridad*) is the meaning of Yoallan, as we see in the glyph of the town: a circle studded with "stellar eyes." The Náhuatl root is *yoalli*, "night."

NATURE OF THE PROVINCE

Inhabitants and languages.—Of the people, Sahagún writes that they speak Mexican and are rich.[b] Tlachmalacac is the most northerly town specified to be "en la provincia que se dice Cuixco,"[c] but the Coixcatlalpan—as it was called—must have stretched even farther in that direction, since the Coixca joined Malinalco in an attack upon the Cuauhnahuac [Cuernavaca] after the latter's surrender to Cortés.[d] And to the east it must have extended beyond Tlalcoçauhtitlan in the adjacent province of that name. The latter town again is the last of which it is stated that "esta tierra se llama Coyscatlalpa y la lengua es coysca,"[e] but the people of distant Texaluca in southwest Puebla remembered in 1580 that they had served their Mexican masters by going to war against the "provinçia de Coyxco."[f]

Other towns of our province listed as speaking Cohuixca in the 1580's are Yoallan,[g] Cocolan,[h] Mayanala (14),[i] and Huitzoco.[j] Since

[k] *Ibid.*, p. 224.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

197 Chilapan is given in Sahagún as Cohuixca, and elsewhere as "lengua mexicana ... no tan pulida,"[40] and since the latter source uses the same words for the speech of Zompanco,[41] Zompanco may be classified with the Cohuixca towns.[42]

[114] Ample texts from the Cohuixca are preserved in the seventeenth-century "Tratado de las Supersticiones ... " of Ruíz de Alarcón.

So much for the linguistic situation in the east. The northwesterly towns of the province of Tepequacuilco were mostly Chontal-speaking: the Chontal were the aborigines there,[43] against whom war was still being waged in 1519. These Chontal towns were Alahuiztlan,[44] Ychcateopan,[45] Oztoma,[46] Totoltetec,[47] and—in earlier times, at least—Cueçalan.[48] Further material on these Chontales de Guerrero is given in the section on Tlachco.

Between the Cohuixca and Chontal regions, south of Iguala, tongues called Matlame and Tuxteco were spoken, according to an unpublished map by Paul Kirchoff.[49]

It was in the southwest part of the province that this linguistic complexity reached its peak. Tetela was Cuitlatec in speech.[50] South of Tetela the utterly mysterious and vanished [?] Tepuzteco was spoken in Otlatlan and Tlacotepec.[51]

635 *Provincial borders in 1519.*—The frontier to the west may be rather
131 precisely delimited, since we have evidence from a long chain of fron-
632 tier towns. Let us examine them from north to south.

Alahuiztlan, in the north, used to send help down to the famous garrison town of Oztoma: food and arms and troops.[52] Alahuiztlan

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Ajahuiztlan 635 632 [317] 131

had a small town subject to it which was called Iztapa. This guarded a salt mine, well-fortified, from the Tarascans.[a] Nevertheless, there is no salt from this province in the tribute list.

Oztoma itself held the great border fortress of the region, built after the arrival of the Mexicans, to serve as a protection from the people of Michoacan.[b] The remains of this fort have recently been investigated and described.[c] [712]

Oztoma figures in the *Mendocino* (folio 18') as one of the garrison towns, under two nameless governors, a "tlacochtectli" and a "tlacatecatl"; and Bernal Díaz refers to Oztuma when, speaking of the garrisons, he cites "... otra capitania En lo de mechuacan ..." (*Historia verdadera de la conquista de la Nueva España* [1904], 1: 302; see fuller quotation of this passage in note 1 under Çitlaltepec and Tlatelolco Province, p. 128).

Totoltepec was another frontier town, which, besides sustaining a local Mexican garrison, had to send aid to Oztoma.[d] [712]

Cueçalan, in turn, was actively at war with Apaztla (a) when the Spaniards came.[e]

Tetela lay west again, and fought against the Michoaque and the Cuitlatec of Azochitlan.[f]

Otlatlan had not been in Mexican hands long enough for quarrels with certain of its fellow subjects to have been erased—quarrels originating, perhaps, when parts of the province were subdued and other parts were still resisting.[g] Nothing is said of the war with Michoacan [648]

[a] *PNE*, 6: 105. Iztapa is also listed in *PNE*, 1: No. 7. This is not, of course, the famous and redundantly named Iztapan de la Sal of the State of Mexico.

[b] A group of Mexican warriors came "con mandato que ... biesen y myrasen a donde podian poblar y açer vn fuerte, de manera questiviese xente en el de guarnyçion contra los de Mechoacan, el qual ... hizieron, y tan fuerte, que para ellos se tenya por [in]espugnable ... era la mas prencipal fuerça que los mexicanos tenyan en todas las fronteras de Mechoacan" (*PNE*, 6: 110). Moedano Kerr, "Estudio general sobre la situación de la fortaleza de Oztuma," *Vigesimoseptimo Congreso Internacional de Americanistas, actas de la primera sesión, celebrado en la ciudad de México en 1939* (1942), 1: 557–563; and Armillas, "Oztuma, Gro.," *RMEA* (1944), 6: 165–174.

[c] By Hendrichs, "¿Es el Arco de Oztuma de construcción Azteca?" *El México Antiguo* (1940), 5: 142–147, and Lister, *op. cit.*

[d] "Estavan en frontera con los de Mechoacan y sustentaban los soldados que alli tenian, mexicanos, y en el fuerte de Oztuma" (*PNE*, 6: 149). "Trayan gerra con los de Mechoacán y Ajuchytlan" (*PNE*, 6: 150).

[e] "Estando en la gerra de Apaztla, llegó el Marques del Balle a México" (*PNE*, 6: 141).

[f] "Trayan gerra con los de Mechoacan y Azuchitlan" (*PNE*, 6: 134).

[g] "Trayan gerra con los yndios de Tlacotepeque y Tetela" (*PNE*, 6: 129).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 and its fellow Cuitlatec of the west, but we have seen that "eran de
632 Moteçuma," being, indeed, a link with the uttermost western hinter-
131 land, the provice of Çihuatlan.

Tlacotepec warred with southern neighbors on the coast,[m] among them Tecpan—this latter, presumably, ceasing to be an enemy when it was subjugated to form part of the province of Çihuatlan.

Zompanco and Chilapan were strong-points on the Yope frontier.[n]

Just south of Chilapa lies Quecholtenanco, a garrison town whose
[712] glyph is in both the *Matricula* and the *Mendocino* (fol. 17') accompanied by the head of one "Mixcoatl, tlacatectli governador."

Regional names.—The whole eastern part of this former province was known as Coixcatlalpan,[o] "que quiere decir Tierra de Lagartijas porque ay muchas."[n]

651

TRIBUTE

Tribute of the whole province.—The original *Matricula* and the *Mendocino* copy specify the following tribute:

CLOTHING

[291] 402 bundles[p] of mantles *colchadas***
402 bundles of mantles striped black and white**
400 bundles of rich mantles (the drawing is of a Tlaloc-head decoration)**
400 bundles of women's skirts and blouses**
400 bundles of little white mantles**
1,600 bundles of large mantles**
[714] 22 warriors' costumes (20 of the common "Huaxteca" armor and 2 special pieces: one Tiger Knight and one with *quetzalpatzactli* headdress)*

FOOD

[262] 4 *troxes* (wooden cribs), 1 each of maize, beans, *huauhtli*, and
[263] *chian**
200 little jars of honey (quarterly)

[m] *PNE*, 6: 124: "trayan gerra con los de la costa, que era los pueblos de Tequepa, Acamalutla, Temazcaltepec y otros pueblos." Tequepa (*PNE*, 1: No. 904) "parte terminos con Nuxco," hence is the present Tecpan.

[n] *PNE*, 6: 318 and 5: 178. On the Yope, see Ortega, "Extensión y límites de la Provincia de los Yopes ...," *El México Antiguo* (1940), 5: 48–53.

[o] *PNE*, 5: 249.

[p] *Relación de Iguala* (1931), p. 221.

[q] The figures for this and the following item are corrected from the erroneous 400 of the *Mendocino* annotation.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

 651

OTHER GOODS

5 strings of *chalchiuites*[a]
8,000 pellets of unrefined copal and burners (quarterly)
400 baskets of refined copal (quarterly)
1,200 yellow-colored clay vessels (quarterly)
100 little copper hatchets (quarterly)

Tribute of the component towns.—Some idea of the way in which this burden was shared may be gathered from the following details. 651 632

Alahuiztlan "davan de trebuto mantas, maiz, chian."[b]

Cueçalan gave chalchiuites annually (the string listed above?), besides mantles and other things.[c]

Chilapan gave maize, chile, and animals important for religious reasons (ocelots and eagles).[d]

Otlatlan gave cotton mantles, delivering them directly to Mexico,[e] instead of to a local depot.

Oztoma, being obliged to support the local Mexican garrison, seems to have given nothing more.

Teloloapan gave clothing of various sorts and a mineral dyestuff called "tlalcozahuitl."[f] 386

Tepequacuilco—as might be expected of the eponymous town—was the presidio from which most of this tribute was gathered.[g] In colonial times, Tepequacuilco became a famous mining center, and indeed, it lost its importance only when the railroad reached Iguala.

Totoltepec is said to have been another nontributary, like Oztoma, because of the garrison, but it still thought it expedient to send its overlords "gifts" of mantles, chalchiuites, and copper.[h]

---

[a] *PNE*, 6: 102.

[b] "Cada vn año vna esmeralda berde que llaman ellos chalchihuitl, dauanle mantas y otras cosas que tenyan" (*PNE*, 6: 140).

[c] "A Motecçuma ... le servia de llevalle algunos tigres y aguilas, algun mahiz y chile en recognoçimiento" (*PNE*, 5: 178). Eagles were the sole tribute of the northern frontier province of Oxitipan.

[d] "Era de Moteçuma ... y le trebotavan mantas de algodon, y ellos myumos se las llevavan a Mexico" (*PNE*, 6: 128).

[e] "Trebutavan ... mantas y guaipiles y naguas y mantillas delgadas, y tlalcozahuitl que es una arenilla para hazer color amarilla, y otros colores, las quales buscaban para llevar a Mexico con el tributo, por sus tercios" (*PNE*, 6: 146).

[f] "Tenian los señores de Mexico en este pueblo en tiempo de su gentilidad presidio de gente de guarnicion que cobravan los tributos: y recojian de toda la cuisca que eran mantas y algodon y otras cosas" (*Relación de Iguala* [1931], p. 223).

[g] "No llevava trebuto por questavan en frontera con los de Mechoacan y sustentaban los soldados que alli tenian, mexicanos, y en el fuerte de Oztuma, y ... algunas vezes del año subiban presente a mexico de mantas y piedras verdes y 'hierro colorado' que abia" (*PNE*, 6: 149).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 632 Tlacotepec gave "seeds" (chian ?) among other items, which are not specified.[30]

[567 721] Zompanco sent prisoners of war to Mexico as slaves.[31] These must have been Yope prisoners, destined to be sacrificed, like those sent from Anecuilco in the province of Çihuatlan. Prisoners taken on the Oztoma frontier were usually sacrificed in the temple of the fortress, we learn, but if captives were important, they were sent to Mexico to be sacrificed.[32]

3. Tlachco

SOURCES OF THE MAP

635 131 The province of Tlachco, now Taxco, is depicted on the fourteenth page of the *Matricula*, copied on folio 36' of the *Codex Mendocino*. This province was situated in territory now forming the northern tip of the State of Guerrero and contained ten towns. Whereas the *Matricula* annotator identified only the town of Tlachco, the *Mendocino* identifies all towns in roman letters. The present map is based on the "Millionth Map" of the American Geographical Society, sheet "Ciudad de México." Former and present place names as given in the *Mendocino* and on the modern map are listed below:

MENDOCINO	MILLIONTH MAP
Acamilyxtlahuacā, 6	Acamixtla
Chontalcoatlan, 9	[No change]
Nochtepec, 7	Noxtepec
Teotliztacan, 2	Huiztac
Tetenanco (? 5)	[See Remarks on Towns]
Teticpac, 8	Tetipac
Tlachco, 3	Taxco Viejo
Tlamacazapā, 4	Tlamacazapa
Tzicapuçalco, 1	Izcapuzalco

One town has not been identified: Tepexahualco.

We may add the town of Çacualpā (10).

[30] "Moteçuma enbio un capitan ... para que coxiese el tributo y semyllas que le trebutavan" (*PNE*, 6: 123).

[31] "Estavan subjetos a Monteccuma ... y le serbia este pueblo de llevarle esclavos de los [que] tomavan en la guerra, y que est, le llevavan en rreconoçimiento" (*PNE*, 6: 317).

[32] "Relación de Acapetlahuaya" (1579), in *PNE*, 6: 117: "Dixeron que todos los presos que tomavan los sacrificaron en el templo prençipal del fuerte grande, y si era persona prençipal la que prendian la embiauan a Mexico presentada a su rrey para que alla la sacrificaren."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

REMARKS ON TOWNS

Acamilyxtlahuacan apparently underwent the same sort of abbreviation which made "Amacusac" out of near-by "Amacoztitlan" in Quauhnahuac Province.[]

Teotlixtacan suffered the fate of other names bearing the prefix *teo-* from *teotl* ("divine, godly"), a sacrilege to Spanish ears. The partly synonymous *huey* ("great") supplanted the earlier prefix here.[] In 1581, Teulistaca and Hueyztaca were used alternately;[] since then, the name has atrophied unrecognizably to Huiztac.

Tetenanco. Although there is no modern mention of the town, this is presumably the Real and Pueblo of Tenango which existed close to the west of colonial Taxco. Its borders are given as Nochtepec, Ichcateopan, Tasco, Acamistlauacan, Coatlan, and Teticpac, which enables us to place it.[] And the name Tenanco—often interchangeable with this common place name—appears in the *Codex Mendocino,* folio 7', as a conquest of Moctezuma I, who was prominent in the reduction of this area.

It may be remarked that both *Tenan*guillo and Cacalo*tenango* lie within the area mentioned.

Tlachco was not the modern Taxco de Alarcón, but somewhat south and lower, the present Taxco Viejo.

Tzicapuçalco was the same town as the present Ixcapuzalco, we learn from a relación of 1569. Anciently it bore still another name, "Pindexo," perhaps applied by the aboriginal Mazatecos who were established in the Chontal region here.[]

Çacualpan was a conquest of Itzcoatl, according to the historical [175] section of the *Codex Mendocino,* and, as Itzacualpa, figures among the subject towns which received Ahuizotl after the conquest of Teloloapan (Tezozomoc, *Crónica mexicana* [1878], p. 528).

[] On location, see *GPM,* p. 178; *PNE,* 1: No. 37 and 6: 269.

[] *PNE,* 6: 270, has a note on such changes.

[] The latter in *PNE,* 1: No. 273, which gives its boundaries, also given in *GPM,* p. 174.

[] *PNE,* 1: No. 671: "junto a Tasco"; *ibid.,* 6: 266: "a la parte del occidente"; *ibid.,* 6: 275.

[] *PNE,* 6: 94, which also provides its location. *Pindexo* is said to be the name of the adobe tree.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

191 101 *Inhabitants and languages.*—The aborigines of the west of this province spoke "Chontal de Guerrero,"[a] a language which is commemorated in the place name Chontalcoatlan.[b] This little-known tongue is distinguished from Mexican, Matlatzinca, Mazatec, and Tarascan, all of which were spoken in the province,[c] and was still current in the late sixteenth century in Coatepec, Chontalcoatlan, and Teticpac,[d] as well as in towns of the adjacent province to the south.

131 635 *Provincial borders in 1519.*—Tlachco Province was a part of the Tarascan frontier. To its south lay the hot-country province of Tepequacuilco, and to its north, Ocuilan, both of these also western frontiers. On the east was opulent Quauhnahuac.

TRIBUTE

651 *Tribute of the whole province.*—It is clear from the *Matricula* that the rich silver mines of later fame were ignored by the Culhua Mexica. Tlachco was a second-rate province, as we see by the list of goods remitted:

CLOTHING

[291] 400 bundles of little cotton mantles, richly worked**
400 bundles of women's clothing**
[248] 1,206 bundles[e] of little mantles of soft henequen**
714 2 warriors' costumes (a *Huaxteca* and a *quetzaltzitzimitl*)*

FOOD

[263] 2 wooden cribs, one of maize, the other of chian*
263] 200 little jars of honey (quarterly)

OTHER GOODS (quarterly)

[323 1,200 yellow pottery bowls
314] 400 little baskets of copal for incense-burners
8,000 pellets of unrefined copal wrapped in palm leaves

651 632 *Tribute of the component towns.*—Tlachco itself is the only town for which itemized tribute data are available. It remitted men's cotton mantles (measurements are given) and women's skirts and blouses,

[a] "Son los antiguos de la tierra" (*PNE*, 6: 143).
[b] *PNE*, 6: 263; *GPM*, p. 135.
[c] *PNE*, 6: 100, 118; *GPM*, p. 127.
[d] Corrected from 1,200.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

one from each household. These mantles were paid locally on each of the eighteen fiestas of the year. Maize for tribute was grown on special lands.[88]

4. Ocuilan

SOURCES OF THE MAP

On page 12 of the *Matrícula* and on folio 34' of the *Codex Mendocino* appears the province of Ocuilan, which now forms part of the southern portion of the State of Mexico. Only the *cabecera* is identified in the former document; the latter bears all names added in roman letters. The map which has been followed in restoring the province is the 1:200,000 map of the "Estado de México," Secretaría de Agricultura y Fomento (1927). Original and present place names are listed below:

MENDOCINO	1927 MAP
Coatepec, 3	Coatepec Harinas
Ocuilan, 7	[No change]
Tenantzinco, 6	Tenancingo
Tequaloyan, 5	Tecualoya (Villa Guerrero)
Tonatiuhco, 4	Tonatico

One town remains to be located: Çincozcac.

To this list the two westerly towns of Zoltepec (2) and Temazcaltepec (1) have been added, on the authority of their sixteenth-century relaciones.[89]

REMARKS ON TOWNS

Çincozcac is cited by Tezozomoc (*Crónica mexicana* [1878], p. 528) as Zicozcatlan, a town figuring in Ahuizotl's Guerrero campaigns.

The proper form *Zoltepec*, from *zollin*, "quail," has been restored with the authority of these relaciones.[90]

NATURE OF THE PROVINCE

Inhabitants and languages.—Sahagún[91] tells us that "those who are called Ocuiltecos live in the region of Toluca, on their lands and boundaries. They have the same ways and customs of those of Toluca,

[88] *PNE*, 6: 276: "Tributaban al rey de México y generalmente daban mantas de tres braças de largo y una bara de ancho, de algodon, y entre dos tributarios casados un guipil y unas enaguas ... . Hazian una sementera grande entre todo el pueblo e lo que della cosian lo juntauan estos governadores y la dauan cada año a Monteçuma, y las mantas dauan de veynte a veynte dias."

[89] "Relación de Zoltepec": "heran subjetos a los rreyes de México a los quales tributaran." "Relación de Temascaltepec": "eran en tiempo de su gentilidad subjetos a un señor de México." *PNE*, 7: 11 and 20.

[90] *PNE*, 7: 102: "por los muchos codornices que ay se nombraron asi."

[91] *Historia general de las cosas de Nueva España* (1938), III: 128.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

but their language is different. They used to practice curses and sorcery very much." The Ocuiltec language is said by Ingeniero Weitlaner, who rediscovered it, to be related to Matlatzinca and Otomí,[] spoken near by. Although the Ocuiltec language is supposed to be limited today to the village of Ocuilan and its environs, the writer has found a mysterious reference to it in a sixteenth-century document from the north of modern Hidalgo State."

Provincial borders in 1519.—In the final native period the province of Ocuilan, approximating a half-moon resting on its back, was bordered on the northwest by Tuluca, and on the northeast by Quahuacan and the Valley of Mexico. To the east lay Quauhnahuac, and to the south the small province of Malinalco and more sizable Tlachco. Ocuilan thrust out westward into the enemy lands of the Tarascans; Temazcaltepec and Zoltepec are spoken of as situated on the Tarascan frontier.

TRIBUTE

Tribute of the whole province.—According to the *Matricula* and *Mendocino* pages, Ocuilan gave the following tribute:

CLOTHING

800 bundles of richly decorated little mantles of henequen**
400 bundles of little cotton mantles decorated with sea shells**
400 bundles of little cotton mantles**
21 warriors' costumes with shields (one of the headdresses having the *quetzalpatzactli* form, and the rest Huaxteca)*

FOOD

4 wooden cribs, 1 each of maize, beans, huauhtli, and chian*
2,000 vessels of white salt**

Tribute of the component towns.—Temazcaltepec alone gave military help (not more than twenty men), two or three bundles of the above-mentioned mantles of henequen, intoxicating mushrooms (*teonacatl*), kindling, and ink made from sap—all this "every time they were asked."[] No data are available on the tribute of other component towns individually.

[] Weitlaner, "Beitrag zur Sprache der Ocuilteca," *El México Antiguo* (1939), 4: 297–328.

[] In Tlachinolticpac, *PNE*, 3: 130.

[] *PNE*, 7: 20: "Tributavanle cada ves que se lo pedian dos y tres cargas de mantas de nequen, que se haze de un arbol que se llama maguei, y davan ongos con que senbo-

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

5. Tuluca

SOURCES OF THE MAP

Page 11 of the *Matricula* and folio 33r of the *Codex Mendocino* contain the province of Tuluca, which is now part of the State of Mexico north and east of the Nevado de Toluca (Zinantecatl). In the *Matricula* these towns are identified in roman letters, one of the names disagreeing with the version given in the *Mendocino* annotations, which are also present for every town glyph. This divergence is noted below. The present map is based on the 1:200,000 map of the "Estado de México," Secretaría de Agricultura y Fomento (1927). Below are the *Mendocino* names and modern names, in so far as the latter appear on the 1927 map:

MENDOCINO	1927 MAP
Cacalomaca, 6	Cacalomacán
Calimayan, 8	[No change]
Calixtlahuacã, 2	Calixtlahuaca
Metepec, 5	[No change]
Mitepec, 7	Tlacotepec
Teotenanco, 10	Tenango (del Valle)
Tepemaxalco, 9	[Missing]
Tuluca, 3	Toluca
Xicaltepec, 1	[Missing]
Çoquitzinco, 11	Xoquicingo

Two towns remain to be identified: Capulteopan and Tepetlhuiacan.

Tzinacantepec (4) has been added to these. It was conquered with the rest of the province, according to the conquest lists of Axayacatl. Another source adds that most of the inhabitants of Tzinacantepec fled to Michoacan, to a place called Tlaulan, the remaining folk making a special milpa in the service of their new master.[99]

---

rrachan y ocote, ques tea para alumbrarse, y tinta hecha del zuma del ocote que se llama en su lengua ocotili."

[99] "Los de Zinacantepec ... se fueron á Mechuacán, adonde ahora llaman Tlaulan, y así quedaron en la obediencia del Señor de México, y tomó para sí todas las tierras, y las arrendaba, y repartió algunas, y por ellas le pagaban tributo. Demás de ésto todos los matalcincos que quedaron hacían una sementera para el Señor de México, que tenía ochocientas brazas en largo y cuatrocientas en ancho" (Zurita, "Breve y sumaria relación de los señores," in García Icazbalceta, ed., *Nueva Colección* ... [1858–1866], III: 221). The exiles in Tlaulan felt the yoke of their persecutors again, for the year following the accession of Tizoc, the Mexicans "hicieron la fiesta en el templo de Huitzilopochtli con la sangre de los Matalcingos y los de Tlaula" ("Historia de los mexicanos por sus pinturas," in García Icazbalceta, ed., *ibid.*, p. 253).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

103 Valle de Bravo (12) and Villa Victoria (13) have likewise been added.

REMARKS ON TOWNS

632 [114] *Mitepec* is given in the usually reliable *Mendocino* interpretation, but no trace of such a town has been found. On the other hand, "Tlacotepec" (the *Matricula* version) is well known, and appears in the conquest lists of Axayacatl, who took all of this region. Tlacotepec, therefore, has been placed on the map.

Teotenanco retained its name as late as 1582, as we see in the relación of that year.[100] Most of these *teo-* prefixes have been dropped, or supplanted by *huey-*, as remarked above.[101]

Tepemaxalco appears in 1582 as a town a league north of Teotenanco.[102] In the 1921 census it figures as a pueblo of the Municipio de San Antonio la Isla. However, only the latter (as La Isla) is on the 1927 map.

Valle de Bravo has been added from Brand's Tarascan map.

Villa Victoria is likewise added from Brand.

NATURE OF THE PROVINCE

101 197 *Inhabitants and languages.*—The name of the province (Matlatzinca) and its people (who did not speak Mexican, but an Otomían language) seems to have come from *matlatl*, "net." Sahagún tries out various étymologies[103] and finally decides that "they are called net [people] . . . because when they sacrificed anyone to their idol they threw him into a net, and there twisted and squeezed him in the said net until his intestines came out." The Matlatzinca are sometimes included among the Eight Tribes whom the Culhua Mexica met at the start of their migration. Matlatzinca-speakers were scattered far into Michoacan, where the village of Charo, northeast of Morelia, was still called San Miguel de Charo Matlatzinco in the eighteenth century. Westerly contacts and migrations were continued in the latter part of the fifteenth century, as has been mentioned above. The most southerly point in which the Matlatzinca have been noted by the writer is Cocolan, in the province of Tepequacuilco, where their tongue was spoken jointly with Cohuixco in the 1580's.[104]

[783] [103]

[100] *PNE*, 7: 1–7.
[101] See p. 23 above.

[104] *Relación de Iguala* (1931), p. 222.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Provincial borders in 1519.—The province of Tuluca was a frontier 635
against Michoacan all along its western side. It was during their expan- 131
sion into this region that the Mexica met one of their few outstanding defeats, being thrown back after penetrating to the shores of Lake Cuitzeo. To the north lay the province of Xocotitlan (a single town and its tributaries); to the east, that of Quahuacan, long Mexicanized; and to the south, Ocuilan, which was separated from Tuluca by the mountain of the icy and sacred lake, the Zinantecatl, now called Nevado de Toluca.

Regional names.—The province of Tuluca was called the Matlat- 635
zinca[n] as far west as Temazcaltepec.[100] Since this term is a rather familiar one, the exact boundaries which it includes have not been investigated here.

TRIBUTE 651

Tribute of the whole province.—The province of Tuluca gave the following tribute, according to the *Matricula* and its *Mendocino* copy:

CLOTHING

400 bundles of little white cotton mantles with decorated border** [291]
400 bundles of henequen mantles, with designs in red, black, and white**
1,200 bundles of white henequen mantles** [714]
22 warriors' costumes and shields, 2 of them of fine quality*

FOOD

6 wooden cribs, 2 of maize, 2 of chian, 1 of beans, 1 of huauhtli* [262]

Tribute of the component towns.—Tzinacantepec's special milpa has been noted. No other information is available on this point. [632]

6. Malinalco

SOURCES OF THE MAP

Two provinces are shown on the thirteenth page of the *Matricula*, 635
which is copied as folio 35' of the *Codex Mendocino*. The two sections 114
are separated by a strong line in the original, but in the copy this is so weak as to be scarcely visible, antl it apparently was not visible to the annotator. There is no question, however, that we are dealing with

[100] *PNF* 7: 16.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 two distinct regions, for, as the map shows, they are separated by
114 various other provinces. One other page includes more than a single province, but there the provinces represent contiguous territories.[100] Here we are concerned with half the page: the province of Malinalco, which is shown on the left-hand side of the original and at the top of the copy. This province, containing two towns, is now a tiny segment of the State of Mexico, southeast of the Nevado de Toluca. The *Matricula* bears both names, written above the glyphs in roman letters, and disagrees with the *Mendocino* in regard to one form. The present
[126] map is based on that of the "Estado de México" in the atlas of the Secretaría de Agricultura y Fomento; the names of the towns as given in the atlas appear below, compared with those of the *Mendocino:*

[103]

MENDOCINO	ATLAS
Malinalco, 1	[No change]
Çonpahuacã, 2	Zumpahuacan

No towns have been added from other sources, although the subject towns of Malinalco in the sixteenth century are known and probably represent the old jurisdiction.[101]

REMARKS ON TOWNS

632 *Çonpahuacan* is given as "Tzonpanco" in the *Matricula* annotation.
114 The glyph may be read either way; the name of the modern town, however, confirms the *Mendocino* version.

NATURE OF THE PROVINCE

346 *Inhabitants and languages.*—Malinalco was a great religious center.
635 It is only recently that the temple there has been excavated. This is a complex structure cut from the living rock, unique in the New World, and in the Old World rivaled by only a few such structures in India. A shrine, entered through a semicircular arch—the open mouth of a stone serpent—is one of the spectacular features of these ruins, which may have been dedicated to the native Military Orders of the Eagle and Tiger Knights. The culture represented in the ruins of Malinalco

[100] I.e., the huge provinces of eastern Guerrero given on p. 18 of the *Matricula* and on fol. 40r of the *Mendocino*.
[101] *PNE*, 1: No. 346.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

is attributed to the Matlatzinca,[*] although in 1791 the Matlatzinca language is not mentioned in a "Descripción" of the place.[**] The religious importance of Malinalco is probably linked with an episode of the migration story of the Mexican tribe. This is given in several variants, the gist of it being that Malinalxochitl, sister of the tribal god Huitzilopochtli, being a great sorceress, was such a plague to the migrating tribesmen that they abandoned her en route, while she slept. She settled then at Malinalco, and bore a son, whose later attempt to avenge the family honor is a part of the story of the foundation of Tenochtitlan. The ramifications of the name Malinalco lead also into a maze of calendaric ritual, for the sacred grass Malinali was the twelfth day-sign.

It has been noted[***] that Malinalco joined the northern Cohuixca in attacking Quauhnahuac after the latter's surrender to the Spaniards.

Provincial borders in 1519.—Malinalco lay well embedded in the Empire, with Ocuilan to the north and west, Quauhnahuac to the east and south, and Tlachco to the south and west.

TRIBUTE

Tribute of the whole province.—The annotations of the *Mendocino*, which we are following for our summary of tribute, do not distinguish between what Malinalco paid and what its fellow, represented on the same page, paid. However, the pictures do show this distinction, and from them we gather that Malinalco Province paid the following:

CLOTHING

1,200 bundles of large mantles of soft henequen[**] [291]

FOOD

4 large bins (1 each of maize, beans, huauhtli, and chian)[***] [262]

[*] Cf. Gante, "The Recently Discovered Malinalco Ruins," *Mexican Art and Life*, No. 2 (April, 1938), and Larsen, "The Monolithic Rock Temple of Malinalco, Mexico," *Ethnos* (1938), 3: 59–63. García Payon's more complete report appeared recently ("Los monuments arqueológicos de Malinalco ... ," *RMEA* [1946], 8: 5–63).

[**] "Descripción topográfica de la jurisdicción Malinalco," dated July 13, 1791, at Tenanzingo: "Los Yndios de toda esta Jurisdiccion hablan el Ydioma Mexicano, á excepcion de el Pueblo de San Juan Azingo, que para su govierno interior, conserban el *Oculteca*, de difícil comprehencion para los estraños."

[***] In the section on Tepequacuilco.

[***] To get this figure I have followed the *Mendocino* annotations, which specify 8 bins for Malinalco and the other province together. This I have divided equally, in view of the equal division of the bins as drawn in the picture.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 *Tribute of the component towns.*—If we allot the foregoing equally
632 between the two towns forming this province, we find that each must have contributed as much in produce as was collected from the whole province of Tlachco, in which there were nine towns, and that each must likewise have paid the equivalent of nearly one-third of the tribute in mantles collected from Tlachco Province.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

III. THE OLD TEPANEC DOMAIN

THE SEVEN PROVINCES which are considered next are linked historically by having been subject to the Tepanec tribe before the formation of the Empire of the Mexica. We know this because the major towns of these seven provinces are listed in a very early colonial document—which will be referred to repeatedly hereafter—as being former subjects of Tlacopan [Tacuba].[1] Tlacopan, of course, inherited these towns when the major Tepanec center of Azcapotzalco was wiped out, a century before Cortés, and brought them as her dowry to the new Triple Alliance. This early document is the only known record which approximates a tribute list of the Tepanec Empire. It is supported—though such support is really needless—by the relación of Tecpatepec (1579),[2] one of the towns of this region, which tells us that Tecpatepec was settled by a venturesome Indian of Azcapotzalco about 1370.

These seven provinces are not all the former Tepanec domain—we have statements from towns of the Toluca area which were included also[3]—but they seem to have formed the heart of it, and they embrace the region about which we may be most dogmatic. It is, on the whole, both physiographically and culturally, a geographical entity, a gateway and frontier of the Chichimeca.

7. QUAHUACAN

SOURCES OF THE MAP

Immediately to the west of Tlacopan, in the modern State of Mexico, lay the province of Quahuacan. It is depicted on the tenth page of the *Matrícula* and on the copy of that page, folio 32r of the *Codex Mendocino*, and includes thirteen towns. The present map is based on that of the Secretaría de Agricultura y Fomento, the 1:100,000 map, "Valle de México" (1937), on which nine towns of this province have been located.

[1] "Memorial de los pueblos subjetos a esta cabecera de tlacupan," published first in facsimile by Paso y Troncoso and printed in *ENE*, 14: 118.

103

MENDOCINO	1937 MAP
Acaxochic, 6	Santa Fe
Ameyalco, 8	[No change]
Coatepec, 14	Coatepec Bateas
Chichicquautla, 4	Xochiquauhtla
Huizquilocan, 5	Huixquilucan
Quahuacan, 1	Cahuacan
Quauhpanoayã, 9	[See Remarks on Towns]
Tecpan	[See Remarks on Towns]
Tlalatlauhco, 13	Xalatlaco

Two other towns have been found elsewhere: Huitziçilapa (3) and Tlalachco (?) (2).

Two towns of the tribute list have not been found: Chapolmoloyã and Ocotepec.

REMARKS ON TOWNS

632 *Acaxochic,* "que ahora es Santa Fé," is located on the authority of
131 Tezozomoc.[4] It lies southwest of Tacubaya.

Chichicquautla has become the modern Xochiquautla, between Huixquilucan and Toluca. The boundaries of "Chichiguautla" given in a sixteenth-century document confirm this identification.[5]

Huitzilçilapa, under the transitional form of "Vçiçilapa," is referred to in the sixteenth century as being adjacent to Tacuba and as having a barrio called Tamimilulpa[6]—which description applies perfectly to the Huitzilapan of the 1937 map.

Quauhpanoayan has vanished from the map. It was divided between two hills, one section being called San Joan Baptista and the other San Francisco. It was a league from Atlapulco (11), a league and a half from Capulhuac (12), "y de los otros dos á media legua." As one of "los otras dos" is known to have been Ocoyacac (10), Quauhpanoayan may be placed with fair accuracy.[7]

Tecpan has long since disappeared from the map. In the late sixteenth century, according to the 1579 map of Ortelius, it lay south of Teocalhuiacan and northeast of Mimimiyauuapan [*sic*]. Ortelius gives

[4] *Crónica mexicana* (1878), p. 530.
[5] *PNE*, 1: No. 113, places it seven leagues from México and touching the jurisdictions of Tacuba, Toluca, and "Vçiçilapa."
[6] *PNE*, 1: No. 782.
[7] *GPM*, p. 232.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

the respective names as "Tequepa," "Teacalhu," and "Mimiapan."[28] 632
Since Tecpan was within the province of Quahuacan and lay on the 131
path of conquest between Quauhtitlan and Huitzilapan,[29] it is not difficult to place approximately.[30]

Tlalochco has also disappeared, though it survived in early colonial days as "Talasco"—a pueblo bordering the limits of Toluca[31] and Huitziçilapa.[32] Sr. Jiménez Moreno suggests that it be identified with Atarasquillo.

Tlalatlauhco I have identified with the modern Xalatlaco. Under the name of "Xalatlauhco" it appears in the conquest lists of Axayacatl, just preceding Quappanohuayan and Ocoyacac, both near neighbors, as we see. *Xalli,* "sand," and *tlalli,* "earth," are words that tend to become confused, as is evident in the ancient name form of Tlatelolco, which began as "Xaltelolco."[33]

NATURE OF THE PROVINCE

Inhabitants and languages.—In the province of Quahuacan, Otomí[34] 635
and Matlatzinca[35] seem to have been the indigenous tongues of the 197
north and south respectively. Politically, the whole province was old 101
Tepanec territory.

Specifically mentioned among the towns subject to Tlacopan are: 635

Atlapulco, 11	Cuauximalpan, 7
Capulhuac, 12	Chichicquauhtla, 4
Coatepec, 14	Huizquilocan, 5

Tlalatlauhco, 13

Provincial borders in 1519.—Quahuacan was surrounded by other 635
Empire provinces—to the north Xocotitlan and Atotonilco, to the east 131
those of the Valley of Mexico, to the south Ocuilan, and to the west Tuluca.

---

[28] These places are identified by the writer in his forthcoming chronological paper.
[29] Cf. preceding note.
[30] Tecpan is perhaps the original seat of the Tepaneca, who later ruled from Azcapotzalco.
[31] *FNE,* 1: No. 561.
[32] *FNE,* 1: No. 782.

[35] Jiménez Moreno and Mendizabal, "Distribución prehispánica de las lenguas indígenas de México."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

TRIBUTE

651 *Tribute of the whole province.*—The following tribute was paid in pre-Conquest days by Quahuacan Province:

CLOTHING

[291 714] 800 bundles of rich mantles**
800 bundles of little mantles of henequen**
41 warriors' costumes with shields*

FOOD

[262] 4 wooden cribs (1 each of maize, beans, chian, and huauhtli)*

OTHER GOODS: TIMBER (quarterly)

[313] 1,200 large planks
1,200 large boards
1,200 poles (*quaumimilli*, morillos)

8. Xocotitlan

SOURCES OF THE MAP

635 Page 13 of the *Matricula* is divided into two sections, as has been
114 mentioned. The left-hand section contains the province of Malinalco,
175 the right-hand section that of Xocotitlan, with but a single town. The material concerning this one-town province is copied on the lower part of folio 35' of the *Codex Mendocino*. In both manuscripts, in addition to the glyph, its name appears in roman letters. Xocotitlan
[128] (1) is located on the authority of the American Geographical Society's "Millionth Map," sheet "Ciudad de México," where it is spelled Jocotitlán. It lies in the modern State of Mexico, at the foot of the peak also called Jocotitlán. With Xocotitlan has been placed the town of Xiquipilco (2), a vaunted conquest of the Mexicans.[16] Five estancias were subject to Xocotitlan in the mid-sixteenth century,[17] which probably were under its jurisdiction pre-Hispanically. If these estancias could be located, they would define the frontier a little more precisely.

[16] Xocotitlan and Xiquipilco were conquered at the beginning of Axayacatl's reign, before the invasion of the Matlatzinca country, as the writer's forthcoming chronological study will show.

[17] *PNE*, 1: No. 799. These are Almolonga, Tlalchichilco, Tlamacuelpa, Tlalcuzpan, and Tlaxomulco.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

Inhabitants and languages.—The inhabitants of present-day Xocotitlan 197
and Xiquipilco speak Mazahua and Otomí[28]—a fact in harmony with 101
Ixtlilxochitl's remarks concerning these people at the time of their incorporation into the Empire.[29]

Provincial borders in 1519.—Xocotitlan was a prolongation of the 635
Empire frontier towards Michoacan, exposed to attack from the west 131
and north. East of it lay the province of Quahuacan.

TRIBUTE 651

Tribute of the whole province.—The tribute of Xocotitlan is given as follows:

CLOTHING

400 little mantles of embroidered henequen** [391]

FOOD

4 large bins (1 each of maize, beans, huauhtli, and chian)** [262]

Tribute of the component towns.—Xocotitlan (like the other diminutive province of Malinalco) gives us figures—lacking from most of 651
the relaciones—for the tribute derived by the Mexicans from a single 632
town, and these figures suggest that life under Mexican rule was arduous.

9. Atotonilco de Pedraza

SOURCES OF THE MAP

The province of Atotonilco de Pedraza (not to be confused with that 635
of Atotonilco el Grande) occupied with its list of towns the verso side 114
of a lost page of the *Matricula,* as we may ascertain by the copy which forms folio 28v of the *Mendocino.*[30] It consisted of seven pueblos, of which only the cabecera survives with its original name. Despite the plethora of Atotonilcos, we may be sure of the location of this particular town and of its corresponding province because references to one other pueblo listed, Otlazpan, have been found in old documents. The

[28] Soustelle, *La Famille Otomi-Pame du Mexique Central* (1937), *passim.*
[29] He puts them among Otomí, Mazahua, and Matlatzinca peoples. *Obras históricas* (1892), II: 256.
[30] See n. 111, p. 31.
[31] The lost original might be called p. 6B.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 province of Atotonilco de Pedraza comprised small segments of the
114 north-central part of modern Mexico State and southwest Hidalgo. The map of Ortelius of 1579 has provided a few hints for the present one, as follows:

[103]

MENDOCINO	ORTELIUS, 1579
Atotonilco, 4	[No change]
Otlazpā, 1	Hatlaspa

Five of the towns, however, have vanished utterly and inexplicably. These are: Acocolco, Guapalcalco, Queçalmacā, Tehuehuec, and Xalac.

To compensate in a measure for these losses we may add two towns: Apaxco (3) and Tepexic (2).

REMARKS ON TOWNS

632 *Apaxco* is one of the towns subject to the Tepaneca of Tlacopan.
131 *Atotonilco,* still bearing its not very distinguished name, survives today; it is situated some twenty kilometers southeast of Tula. It has been given the arbitrary "apellido" of Pedraza in the present work, for ready identification. Maese Diego de Pedraza and, later, his son Melchor were encomenderos of the town in the sixteenth century.[22]

Otlazpan is a difficult problem, but one which must be solved so far as possible, since this and Atotonilco de Pedraza are the only two towns indicated on folio 28r of the *Mendocino* which can be found, and Atotonilcos are confusingly abundant. Otlazpan appears on at least one early map, and it has been possible to unearth various references to it, some of as recent a date as 1800. It may be located with reasonable certainty, yet there is no clear evidence as to what happened to it.[23]

[22] *PNE*, 1: No. 1.

[23] The "Anales de Quauhtitlan" (Walter Lehmann, *Die Geschichte der Königreiche von Colhuacan und Mexico* [1938], vss. 470, 481, 629, etc.) cite it various times. The *Codex Osuna* (1878) gives its glyph (fol. 497-35), together with that of Tepexic and the legend "otlazpā, yhua tepexic ce comēdero" ("Otlazpan and Tepexic, one encomendero"). A little-known codex, the *Mariano Jiménez* (1904), lists the salaries of the officials of Otlazpan in 1549. On the Ortelius map of thirty years later, it appears to the southwest of Tepeji del Río. Finally, a whole tome (No. 1201) of the Ramo de Tierras of the Archivo General de la Nación, México, is devoted to land disputes between Otlazpan and a neighbor. This contains documents from the sixteenth to the nineteenth centuries. The Códice Franciscano, written in 1570, cites (p. 15): "... otro monasterio fundado en termino de dos pueblos, los cuales se juntaron para lo edificar y poblar cabe él ... el uno Tepexico [Tepexic] ... el otro se llama Otlazpan."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

The pueblo of Jagueyes disputed certain pastures with Otlazpan; 632
moreover, from the reference to the dispute it is clear that Tepexic, 131
Huehuetoca, and Otlazpan also had a common boundary at a hill called Hueytepec.[n] The *Codex Mariano Jiménez* also deals in part with the limits between Tepexic and Otlazpan. But whether we should place Otlazpan north or south of the line formed by these three pueblos is uncertain. The evidence is slightly in favor of the south.[n]

Tepexic figures among the towns subject to Tlacopan, in the list we have cited at the opening of this section.

NATURE OF THE PROVINCE

Inhabitants and languages.—It would appear[n] that the people of Otlaz- 177
pan and of its subject towns spoke Otomí and the related Mazahua, 579
whereas the inhabitants of Tepexic spoke Náhuatl. This division was 101
accompanied by an enmity the echoes of which lasted into recent times in the form of a yearly stone-fight between the youths of the two towns at a place called the "Puente de las Guerras."

Provincial borders in 1519.—Many of the towns of this province have 635
not been located, but its outline is known from the boundaries of its 131
neighbors. To the north of Atotonilco de Pedraza lay Xilotepec and Axocopan provinces, to the east Hueypuchtla and Quauhtitlan, to the south Quahuacan, and to the southwest Xocotitlan—all provinces of the Empire.

[n] AGN, Tierras 1201, last document, p. 6, is a document of the Viceroy Martin Enríquez which bears the date May 12, 1576, and reads in part: "hago merced a melchoir nuñez de vn siõo destancia para ganado menor entre los terminos de los pueblos de tepexi y utlaxpa y huegetoca en vn cerro que llaman los yndios gueytepeque y en lengua castellana cerro grande a la parte del sur en vna barranca que baxa a vna quebrada grande que be hazia san bernardino sexeto de utlaxpa." Folio 11' calls this hill "ococacaya hueytepec."

[n] Nicolás León (*Codex Mariano Jiménez*, p. 3) gives a list of subject towns of Otlazpan—without any hint of his authority, of course—and names among them Tlautla and San Ildefonso. He also calls Otlazpan "San Juan." This would locate Otlazpan north of Tepexic. But in view of the frequent unreliability of León and his errors and oversights as editor of the *Mariano Jiménez*—he even overlooks the glyph of the town in the codex, fol. 6', where the alcaldes are drawn with the treasure chest—more faith is probably to be placed in the Ortelius map, on which Otlazpan falls south of Tepexic. In the land dispute with Jagueyes, Otlazpan is called "San Francisco" (AGN, Tierras 1201, Cuaderno 3) and two subject ranchos are named, San Bernardino and El Maguey—undiscoverable, of course. Burial records of San Francisco [*sic*] "Ontlazpan," 1611–1615, are preserved in the Ayer Collection, Newberry Library, Chicago, Illinois (Indian Linguistics Catalogue, No. 1468). [114]

[n] According to León, *Codex Mariano Jiménez*, p. 3.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 *Regional names.*—Atitlaquia and Apaxco lay in the margin of the ancient Teotlalpan, on which we have commented elsewhere.[**]

TRIBUTE

651 *Tribute of the whole province.*—This obliterated province gave the following items of tribute:

CLOTHING

[291 714] 400 bundles of rich mantles**
400 bundles of mantles with black-and-white border**
800 bundles of large mantles of "twisted" cloth**
62 warriors' costumes, together with shields*

FOOD

[262] 4 wooden bins (1 each of maize, beans, huauhtli, and chian)*

OTHER GOODS

[317] 400 loads of lime**

651 *Tribute of the component towns.*—Atotonilco de Pedraza itself
632 seems to have figured in the lime manufacture noted above.[**]
317 Otlazpan, in 1549, paid tribute of lime, "mantas labradas con tochomitl," and many other articles, as we see in the *Codex Mariano Jiménez*. These must be the "mantillas de ricas labores ... ropa que bestian los S[eñore]s y caciques." *Tochomitl* is defined in the "Relaciones históricas estadísticas" (1: 228) as "lana teñida de colores la qual dicha lana era conejos y liebres." (Compare with Tepechpa, p. 72.)

10. Quauhtitlan

SOURCES OF THE MAP

635 Page 6 of the *Matricula* represents the once great province of Quauh-
114 titlan, whose annals are so precious to the investigator of ancient Mexican history and ethnology. This page is copied as folio 26' of the *Codex Mendocino*. The province lay in the modern State of Mexico, north
[128] of the Federal District. Seven towns are listed in this province, the present map of which is based on that of the Secretaría de Agricultura

[**] Barlow, "Las provincias septentrionales del Impero de los Mexicanos," in *Tercera Reunión de Mesa Redonda sobre Problemas Antropológicos de México y Centro América, — 1943: El Norte de México y el sur de Estados Unidos* (1944), pp. 119–121.

[**] *PNE*, 1: No. 1 [*ca.* 1550]: "Ay muchos magueyes y tunas y piedra para hazer cal y destas cosas tienen mucha grangeria los yndios." The whole region was abundant in lime.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

y Fomento ("Valle de México," 1937; scale, 1:100,000). The correspondence of old and modern names appears below:

MENDOCINO	1937 MAP
Cuezcomahuacā, 6	[See Remarks on Towns]
Quauhtitlan, 2	Cuauhtitlán
Tehuiloyocā, 4	Teoloyucan
Teporxco, 1	[No change]
Xiloçinco, 7	Xilotzingo

Two towns remain to be identified: Alhuexoyocā and Xalapan.

On the other hand, we may add two other subject towns to the province: Huehuetoca (5) and Tepotzotlan (3).

REMARKS ON TOWNS

Cuezcomahuacan is said, in a document of 1570, to be subject to Tequixquiac; indeed, to be almost one with it.[20]

Huehuetoca figures in the list of subjects of Tlacopan.

Tehuiloyocan has become Teoloyucan and lies southeast of Huehuetoca. That it is the same pueblo is shown by the 1570 document, which places it "de este dicho pueblo de Güegüetocan una legua."[21]

Tepotzotlan is another of the former Tepanec towns.

Xalapan (not on the map) may possibly be the San Lorenzo Axalpan subject to Quauhtitlan.[22]

NATURE OF THE PROVINCE

Inhabitants and languages.—The rich and complicated history of the region is preserved in its annals, which cannot be summarized here. (Such a résumé may be found in Barlow's review of Velazquez' edition of *Códice Chimalpopoca*, in the *Hispanic-American Historical Review* [1947], 27: 520–526.) Quauhtitlan, Xiloçinco, and Tepotzotlan figured eventually among the towns of the Tepaneca, however; and the Náhuatl tongue predominated.

Provincial borders in 1519.—Quauhtitlan lay in the heart of the Empire. To the northwest was Atotonilco de Pedraza, to the northeast Hueypuchtla, to the east the lacustrine towns, and to the southwest Quahuacan.

[20] *GPM*, p. 67: "distante de la cabecera cuatrocientos pasos: está esta hacia el sur."
[21] *GPM*, p. 263.
[22] *PME*, 3: 33, n. 1.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651

TRIBUTE

Tribute of the whole province.—Rush mats and seats were a distinctive tribute of the province of Quauhtitlan, which paid the following items:

CLOTHING

[291 714]

400 bundles of rich little mantles**
400 bundles of little mantles with black-and-white border**
400 bundles of little white mantles**
62 warriors' costumes with shields (2 fine pieces)*

FOOD

[262]

4 wooden bins (1 each of maize, beans, chian, and huauhtli)*

OTHER TRIBUTE

[285]

4,000 *petates*
4,000 rush seats

11. Xilotepec

SOURCES OF THE MAP

635 114 The province of Xilotepec, which kept its name into the late sixteenth century, contained seven towns, according to page 9 of the *Matricula* and folio 31' of the *Mendocino*. It lay in the southwest part of Hidalgo and in the northwest part of the State of Mexico. In the *Matricula*, the towns of Xilotepec and Michmaloyan are identified in roman letters; in the *Mendocino*, all are. The present map is based on the "Millionth [128] Map" of the American Geographical Society, sheets "San Luis Potosí" and "Ciudad de México." Below are the *Mendocino* names which have been identified with those of the modern map:

103

MENDOCINO	MILLIONTH MAP
Acaxochitla, 7	[Missing]
Michmaloyan, 5	Michimaloyan
Tecoçauhtla, 11	Tecozautla
Tepetitlan, 6	Tepetitlán
Tzayanalquilpan, 3	Soyaniquilpan
Xilotepec, 2	Jilotepec

There remains a seventh town to identify in this province: Tlachco. It is possible that this may be the modern Querétaro, for the Mexican version of Querétaro (more properly "Querendaro" in Tarascan) is

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Tlachco, as we see in the "Descripción de [redacted] ever, it 632
is not really clear that Querétaro is a pre- [redacted] m- 114
pression given by the relación is that it was founde [redacted] the
Spanish invasion. And evidence that Querendaro-Tlachco is not the
Tlachco of the *Matricula* is found in the same relación, in the list of
"mojoneras" lying between Querétaro and Xilotepec. Tlachco, therefore, remains a puzzle.

We may add a few towns to those of the *Matricula*, and establish the 635
western frontier of the province, on the authority of the sixteenth- 632
century relaciones: Atlan (9), Hueichiapan (10), Nopala (8), Titlmilpa (1),[88] and Zimapan (12).[89]

REMARKS ON TOWNS

Acaxochitla may be found in the Secretaría de Agricultura atlas. 632

Titlmilpa seems to be the best form for the name which Orozco y Berra transcribes from the same document (in his *Geography*, p. 258) as "Tiltmilpa." Today it is Timilpan.

NATURE OF THE PROVINCE

Inhabitants and languages.—The province of Xilotepec was populated 635
by the Otomí. One early writer calls them "barbarous compared to [197]
the Mexicans," but admits that they are not nomads like their Chichi- 101
mec neighbors.[90] These "barbarous" people of Xilotepec Province, it
should be pointed out, produced the only known codex with an 212
Otomí (instead of a Mexican) text, possibly under the stimulus of

[88] In Primo Feliciano Velázquez, ed., *Colección de documentos para la historia de San Luis Potosí* (1897–1899), I: 1–48.

[89] The series appears thus in the "Descripción de Querétaro," in Velázquez, ed., *Colección de documentos para ... San Luis Potosí*, I: 13: "hera su mojonera con los de Xilotepec los pueblos siguientes santiago tecuçautla, sanct matheo gueichiapa, sant josepe atla," which have been located. Then follow three towns which have not been identified: "santa maria tleculutl ycatzia san geronimo acagulcingo san lorenço tlechatitla"; and the list ends with "san andres titlmepa," the Timilpan of today. Acagulcingo seems to be better rendered in a document published by Simpson (*Studies in the Administration of the Indians in New Spain*, Ibero-Americana [1934], No. 7, p. 48), where it is given as "San Geronimo Acagualcingo." *ENE*, 14: 119, gives "Acaualtzinco."

[90] *PNE*, 6: 3: "en tiempo de su gentilidad obedecian los naturales destos pueblos al señor de Jilotepec ... en cuyo rreconoçimiento le dauan de la caça que sacauan."

[90] "La provincia que llaman de Xilotepec, la cual es toda de indios otomis, que son barbaros en respecto de los mexicanos, y asi no tienen tanta policía, y confinan con los chichimecas, que son como alárabes y estan todavia de guerra" (García Icazbalceta, ed., *Nueva colección de documentos para la historia de México* [1886–1892], II: 18).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

212 their Náhua masters. These unique historical annals for the years 1403–1528 were discovered by Lic. Alfonso Caso.[30] They come from the town of Hueichiapan, on the very Chichimec frontier, and should afford important ethnographic and historical data when published.

632 Three of the seven towns listed on the *Matricula* page are definitely
635 stated to be old Tepanec domain. These are Michmaloyan, Tecoçauhtla, and Xilotepec. Two others, which fell within the province but are not on the *Matricula* page, were also Tepanec: Tula (4) and the unlocated frontier town of Acaualtzinco.

635 *Provincial borders in 1519.*—To the west and north of the province
131 of Xilotepec lay the "tierra de guerra" of the Chichimec nomads.[31] Traders ventured into this region, however, as did Conin, the Otomí *pochtecatl* who founded Querétaro. East of Xilotepec lay the Empire province of Axocopan, and to the south that of Atotonilco.

Regional names.—The ancient Teotlalpan began immediately on the borders of Xilotepec, with the town of Atitlaquia,[32] but apparently did not overlap with it.

TRIBUTE

651 *Tribute of the whole province.*—According to the *Matricula* and the *Mendocino,* the following tribute was extracted from the province of Xilotepec:

CLOTHING

[291 7:4] 400 bundles of women's skirts and blouses, richly decorated**
408 bundles[33] of men's mantles**
400 bundles of embroidered skirts**
800 bundles of mantles with a spotted design**
408 bundles[34] of rich little mantles**
400 bundles of mantles with a red stripe in the middle**
2 warriors' costumes with shields*

FOOD

[262] 4 wood cribs (1 each of maize, beans, chian, and huauhtli)*

OTHER GOODS

[231] 1–4 live eagles, "according to what they found"[35]

[30] Alfonso Caso, "Un Codice en Otomí," in *Proceedings of Twenty-third Congress of Americanists, . . . 1928* (1930), pp. 130–135.
[31] Cf. n. 35 above.
[32] *PNE*, 6: 201.
[33] Corrected from 400 of *Mendocino* commentary.
[34] Corrected from 400.
[35] The only other live-eagle tribute specified in the *Matricula* came from the province of Oxitipan, also in the north of the Empire.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Tribute of the component towns.—A little more detail on tribute appears in the "Descripción de Querétaro," which remarks the abject subservience of Xilotepec Province to its masters, the tribute of mantles and game, and the brutality of the tax collectors.[a] 651 632

12. Axocopan

SOURCES OF THE MAP

The province of Axocopan was depicted on one of two leaves of the *Matricula* which have disappeared completely. It must have occupied the recto side of a leaf between those representing the provinces of Quauhtitlan and Hueypuchtla, since it is preserved for us in this location in the copy of the *Mendocino Codex*, folio 27'.[b] Axocopan Province lay in the southwest part of the territory belonging to modern Hidalgo State. Its towns have been located on the basis of the sheet "San Luis Potosí" of the American Geographical Society's "Millionth Map," supplemented by the Hidalgo map of the atlas of the Secretaría de Agricultura y Fomento. The equivalents between ancient names and those of the "Millionth Map" are noted below: 635 114 [128] [103]

MENDOCINO	MILLIONTH MAP
Atenco, 5	[Missing]
Axocopan, 1	[Missing]
Mizquiyahuala, 7	Mixquíahuala
Tecpatepec, 8	[No change]
Temohuayã, 2	[Missing]
Tetepanco, 3	Tetepango
Tezcatepec, 9	[Missing]
Tlaahuililpã, 4	Tlahuelilpa
Xochichiuca	[Missing]
Yzmiquilpã, 10	Ixmiquilpan

Despite the absence of many names from the "Millionth Map," and of some from both maps used, all these towns have been located. We may even add to them the following town: Tezontepec (6).

[a] "Descripción de Querétaro," in Velázquez, ed., *Colección de documentos para ... San Luis Potosí* (1897–1899), I: 33: "en tiempo de su gentilidad [los de Xilotepec] eran sujetos á los señores de mexico á los cuales adoraban como a dioses ... tributabanles todo lo que podía cada vno ó lo que querían los que lo rrecogían daban mantas gallinas codornices conejos y sobre esto les apremiauan los cojedores con açotes y otros malos tratamientos."

[b] Regarding the missing pages, see Introduction, pp. 6–7. This vanished *Matricula* original may be called p. 6A of that codex.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

REMARKS ON TOWNS

632 131 *Atenco*, now Atengo, is a pueblo of Tezontepec de Aldama on the Agricultura y Fomento map. It is mentioned in a sixteenth-century document as being a league and a half from "Mizquiahuala."[44] The only other Atengo in the area of the former province is a mere barrio of Tepeji del Río, which there is no reason to choose.

Axocopan was a town the name of which underwent a rapid metamorphosis in the sixteenth century, from Axacuba to Ajucuba.[45] It may be accurately located from various references: it was three leagues south of Tecpatepec,[46] two leagues from Atitlaquia,[47] and bordered "Tetebanco" on the east and south.

Temohuayan is missing from the "Millionth Map," but appears as "Temoaya" on that of the Secretaría de Agricultura.

Tezcatepec is presumably the one north of Mizquiyahuala on the Secretaría de Agricultura map. Though this Tezcatepec has not appeared in the early sources examined, and though there is a better-documented modern town of the same name (in the province of Hueypuchtla), it appears that the homonym was called Tezcatepectonco in pre-Hispanic times.

Tezontepec appears among the pueblos subject to Tlacopan in the list we have cited at the opening of this section.

Xockichiuca is gone, but it once stood one league from Axacuba, to which it was subject.[48] The direction is not specified.

NATURE OF THE PROVINCE

635 197 *Inhabitants and languages.*—The cabecera of Axocopan and the following towns were formerly Tepanec dominions: Mizquiyahuala, Tecpatepec, Tezcatepec, Tezontepec, Tlaahuililpan, and Yzmiquilpan. Both Otomí and Náhuatl were spoken in the province, the latter from Chichimec times, apparently.[49]

[44] *GPM*, p. 185.
[45] *PNE*, 1: No. 1; *GPM*, p. 188.
[46] *PNE*, 6: 36.
[47] *PNE*, 6: 205.
[48] *PNE*, 3: 58; 6: 19.
[49] *PNE*, 6: 15, 32, and 35. On the population of the province by Chichimec settlers, see *PNE*, 6: 14 and 24.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Provincial borders in 1519.—To the north lay the republic of Metz- 635
titlan, whose soldiers fought with Yzmiquilpan. To the east was 131
Hueypuchtla, to the south Atotonilco, and to the west Xilotepec—all Empire provinces.

Regional names.—Many of the towns of the province of Axocopan 635
lay in a region called the Teotlalpan.[30] This term is defined as "tierra de los dioses."[31] The Teotlalpan is a term used far into the sixteenth century, by Alonso de Santa Cruz in his *Geography*, and by others. It does not seem to have been coterminous with the province of Axocopan in the north: Yzmiquilpan is nowhere stated to be inside the Teotlalpan, for example. But documentation is scarce.

TRIBUTE

Tribute of the whole province.—The tribute of Axocopan and the 651
other subjects of this province was as follows:

CLOTHING [291
714]

800 bundles of rich little mantles**
400 bundles of little mantles with black-and-white border**
800 bundles of little white mantles**
400 bundles of women's skirts and blouses**
42 warriors' costumes with shields*

FOOD** [262
263]

4 wooden cribs (1 each of maize, beans, chian, and huauhtli)
400 large jars of thick maguey honey

Tribute of the component towns.—Some indication of the way in 651
which this burden was divided among the tributaries appears below. 632

Atenco is grouped with Mizquiyahuala (*q.v.*).

Axocopan gave shields and spears, henequen mantles, and made nine special milpas for its overlords.[32]

Mizquiyahuala, together with Atenco, paid one turkey every twenty [235]
days, as well as henequen mantles: "... estavan sujetos al p[uebl]o de

[30] Axocopan, *PNE*, 6: 14; Mizquiyahuala, *PNE*, 1: No. 347; Tecpatepec, *PNE*, 6: 34; Tezcatepec, *PNE*, 6: 32 and 1: No. 546; Tlashuelilpa, on the other hand, "está ya casi fuera de la comarca que dizen de la Teotlalpan" (*PNE*, 3: 73).

[31] *PNE*, 6: 14 and *passim*.

[32] To the ruler in México, "dauanle de tributo: rrodelas de nequen [*sic*] y varillas tostadas, mantas de nequen de diferentes labores; haxianle nueve sementeras de mahiz" (*PNE*, 6: 15).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 tula ... Ansi mismo estavan sujetos al de mexico donde estava y rresidia
[235] montesuma q̃ en aquellos tiempos hera señor dellos, y la davan de tributo cada un yndio una gallina desta tierra cada veinte dias y unas mantas de nequen y todos en general chicos y grandes hazian lo mismo" (RHE, 1:253).

[237] Tecpatepec paid henequen mantles and skirts, deer horns, and game, as well as making a special milpa.[83]

[411 281] Tezcatepec paid tribute of game, bows and arrows, and deerskins.[84]

13. Hueypuchtla

SOURCES OF THE MAP

635 114 On page 7 of the *Matricula* and on folio 29' of the *Codex Mendocino* appears the province of Hueypuchtla, which included south-central Hidalgo and a tiny segment of north-central Mexico. The present map
[128] is based on the American Geographical Society's Millionth Map, "San Luis Potosí" and "Ciudad de México." In the *Matricula,* only the cabecera is identified in roman letters; in the *Mendocino,* all towns are. The following have been identified:

103

MENDOCINO	MILLIONTH MAP
Acayocã, 7	Acayoca
Atocpan, 10	Actopan
Hueypuchtla, 3	Hueypoxtla
Tequixquiac, 1	[No change]
Tetlapanaloyã, 2	Tlapanaloya
Tezcatepectonco, 6	[See Remarks on Towns]
Xicalhuacan (? 4)	[See Remarks on Towns]
Xomeyocan (? 5)	[See Remarks on Towns]

One pueblo of the *Matricula* remains unidentified: Xalac.

On the other hand, we may add two more towns with certainty to this province: Itzcuincuitlapilco (8) and Tolnacuchtla (9).

REMARKS ON TOWNS

632 131 *Atocpan* has become the Actopan of today. Although there still exists another town called Atocpan (southeast of Hueypuchtla), ours is the

[83] *PNE,* 6:36: "dauan de tributo mantas de nequen y naguas, cueros de venado, venados, liebres, conejos y codornizes, y le hazian vna sementera de mahiz."
[84] *PNE,* 6:32: "rreconoçian a Moctezuma ... davanle de tributo venados, conejos, liebres, culebras, arcos, flechas, pellejos de venados."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

subject of the sixteenth-century reports, in which it is still called Atucpan.[] Moreover, the "Relación de ... Meztitlan" gives it as one of the towns against which that state made war.

Itzcuincuitlapilco was one of the former Tepanec towns. It appears in the atlas of the Secretaría de Agricultura.

Tezcatepectonco is the interpretation of the glyph made by the *Mendocino* annotator. It might equally well be read "Tezcatepec." A vanished Tezcatepec[] is the only town of this name which is geographically admissible.[] It lay between Hueypuchtla, Axocopan, and Tequixquiac,[] two long leagues southeast of Axocopan[] and "dos leguas buenas" north of Hueypuchtla.[]

Tetlapanaloyan lay "quatro leguas pequenas" to the south of Axocopan[] and "media legua pequena" to the west of Hueypuchtla.[] It must therefore be the Tlapanaloyan of today.

Xicalhuacan is stated to be one league north-northeast of Tizayuca.[]

Xomeyocan lay two leagues east of Hueypuchtla.[]

NATURE OF THE PROVINCE

Inhabitants and languages.—The following towns of this province were old Tepanec dominions: Atocpan, Hueypuchtla, Itzcuincuitlapilco, and Tequixquiac. The language of the province was predominantly Otomí, but some Mexican was also spoken there.[]

Provincial borders in 1519.—On the north, Hueypuchtla was bordered by the republic of Metztitlan, with which Atocpan had war.[] To the east lay Atoconilco (el Grande), to the southeast Acolhuacan, to the south Quauhtitlan, and to the west Axocopan and the other Atotonilco—all Empire provinces.

[] *PNE*, 6: 24 and 35.
[] The relación of this town is given in *PNE*, 6: 31–34.
[] Cf. another Tezcatepec in Axocopan Province.
[] *GPM*, p. 188.
[] *PNE*, 6: 15. See also *PNE*, 3: 70.
[] *PNE*, 6: 28.
[] *PNE*, 6: 15.
[] *PNE*, 6: 28.
[] *PNE*, 3: 42.
[] *PNE*, 6: 27.
[] In Hueypuchtla, for example, "hablan dos idiomas, otomi y mexicana, y la mas general es la otomy" (*PNE*, 6: 28). In Tolnacuchtla, "hablan la lengua otomy ... y algunos hablan la lengua mexicana" (*PNE*, 6: 24).
[] "Relación de Meztitlan."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 *Regional names.*—The cabacera of Hueypuchtla lay within the region known as the Teotlalpan,[*] as did Tequixquiac[**] and the Tezcatepec we have identified as the pre-Hispanic Tezcatepectonco.[**]

TRIBUTE

651 *Tribute of the whole province.*—Hueypuchtla and its subject towns paid the following tribute to the Empire:

CLOTHING

[291 714] 400 little decorated mantles**
400 henequen mantles with black-and-white border**
800 white henequen mantles**
62 warriors' costumes, with shields*

FOOD*

[262 263] 4 wooden cribs (1 each of maize, beans, chian, and huauhtli)
400 jars of thick maguey honey

651 632 *Tribute of the component towns.*—Some of the elements of the tribute listed above may be traced in the relaciones of the sixteenth century.

[286] Hueypuchtla gave game and mantles and weapons, as well as making a special milpa for purposes of tribute. Nets are also mentioned—an unusual item.[*]

Tezcatepec[tonco] provided weapons and game.[*]

[231] Tolnacuchtla gave tribute of game, among which figured live eagles.[*]

---

[*] *PNE*, 3: 48, 6: 26. See discussion of regional names, Axocopan (p. 47) for a definition.

[**] *PNE*, 3: 51.

[**] *PNE*, 6: 32.

[*] *PNE*, 6: 28: "rreconoçian a ... Moctezuma y a sus antecesores, dauanle por tributo, venados, conejos, rredes y vnas mantillas de nequen que son como anjeo de Castilla, y codornyses y cutalas, arcos y flechas, y le hazian vnas sementeras, mahiz, frisoles, calabaças y otras semyllas menudas de esta tierra."

[*] *PNE*, 6: 32: "davanle de tributo venados, conejos, liebres, culebras, arcos, flechas, pellejos de venados."

[*] Live eagles were depicted in the *Matrícula* from two other provinces of the north: Ositipan and Xilotepec. *PNE*, 6: 25: "davanle de tributo aguilas, codornyces, venados, liebres y conejos."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

IV. THE OLD ACOLHUA DOMAIN: THE NORTH

JUST AS THE PRECEDING GROUP of provinces may be linked conveniently as the Old Tepanec Domain, those which we are about to consider belong predominantly to another member of the triumvirate, Acolhuacan Texcoco. The chief authority for this is the chronicler Ixtlilxochitl, who tells us in some detail how Nezahualcoyotl placed governors and mayordomos in Cuauhchinanco, Tuchpa, and other towns we shall consider—enough to imply that the whole northeast was under the dominion of the Acolhuaque in late pre-Hispanic days. He explains that these were the towns "allotted to the realm of Texcoco, the other two kings having no share in them."[1] Though Ixtlilxochitl is accused of mendacious nationalism, we may accept his word, inasmuch as such sources as a list of pueblos subject to Texcoco[2] and the conquest lists of that city-state, which the writer will publish later in a chronology of the Empire, confirm his statements absolutely.

14. OXITIPAN

SOURCES OF THE MAP

The last leaf of the *Matricula* as it exists today (p. 28) deals with the province of Ctzicoac (*Mendocino*, fol. 55'). Following this page there was originally at least one more leaf in the *Matricula*—a leaf which is known only from the *Mendocino* copy. At this point in the *Mendocino* appear the words "fin de la parte segunda," that is, the end of the tribute section of this tripartite codex. Presumably the lost *Matricula* leaf was blank upon its verso when the *Mendocino* copyist had it before him, or he would not have written "fin." The long array of tributaries ended here.

What must have been the recto of the original leaf not only is the end of the manuscript, but also represents the end of the Empire of the Mexica, as far as the north is concerned, for there is but one town

[1] "Esta provincia y las demas en donde puso sus mayordomos y cobradores, fueron las que se ajudicaron al reino de Texcoco, sin entrar en participacion los otros dos reyes" (Ixtlilxochitl, *Obras históricas* [1892], II: 198).

[2] In the *Anales del Museo Nacional de ... México*, Epoca I (1897), 4: 48–51 and Lehmann, *Die Geschichte der Königreiche von Colhuacan und Mexico* (1938), vs. 1343, among other places.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 114 [31] represented on this page, and it was the most northerly of the whole vast Empire. This town is marked Oxitipan in the *Mendocino* copy, which is all we have. The following equation has been made:

Oxitipan, 1 Ojitipa de Mirador

Many other towns must have been reckoned in with Oxitipan, to [651] judge from the figures for pre-Hispanic and colonial tribute, which differ enormously. (Four hundred loads of *axi* compared with thirty, for example.)

REMARKS ON TOWNS

632 Though Oxitipan is described as lying eight leagues to the west of what is now Ciudad Valles,[3] it is clear that the reporter had his directions mixed. Ojitipa de Mirador is the same distance south, being a rancho of the municipio of Tancanhuitz, in the extreme southeast of the State of San Luis Potosí. The name of a stream flowing near Tancanhuitz is Oxitipan—another instance of the survival of this once important place name. Ciudad Valles was originally the Villa de Santiago de los Valles de Oxitipan.[4]

NATURE OF THE PROVINCE

635 114 *Inhabitants and languages.*—Although we have no specific description of Oxitipan from early times, an English *pochtecatl* named Chilton gives an account from 1572 dealing with near-by areas to the east and north, that is, Tancuaylab and the modern Ciudad Valles.

Chilton writes:[5]

635 105 The first town we came unto is called Tancuylabo, in which there dwell many Indians, high of stature, having all their bodies painted with blew, and weare their haire long down to their knees, tied as women use to doe with their haire-laces. When they go out of their doores, they cary with them their bowes and arrows, being very great archers, going for the most part naked. In those countreys they take neither golde nor silver for exchange of any thing, but onely Salt, which they greatly esteeme, and use it for a principall medicine for certain wormes which breed in their lips and in their gummes.

[3] *PNE*, 1: No. 424: "Confina con Tambolon"—now a rancho of Valles.
[4] Meade, *La Huexteca: Epoca Antigua* (1942), p. 293.
[5] Chilton's narrative in Hakluyt, *The Principal Navigations . . . of the English Nation* (Everyman's Library, 1907), VI: 275.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Chilton later fell into the hands of Indians near Santiago de los Valles (Ciudad Valles), and was threatened with cannibalism, but they feared his leanness to be due to the pox, and spared him. Scalp-taking here is noted by Chilton: 635 105 [726]

> ... they take a great pride in killing a Christian; and to wear any part of him where he hath any haire growing, hanging it about their necks, and so are accounted for valiant men.

Native trade connections between the Valles area and distant Xalapa of Veracruz are also noted by Chilton. [439]

In early pre-Hispanic times, Oxitipan was claimed, along with Tulancinco and other towns of the north, as part of the old domain of Xaltocan.* 635 175

Provincial borders in 1519.—In 1519, the province of Ctzicoac lay to the south; on all other sides, the province of Oxitipan lay open to Chichimec attack. 635 131

TRIBUTE

The town of Oxitipan, which probably included various subjects, gave the following tribute in the native period: 651

CLOTHING** [291]

2,010 bundles† of large mantles, each 2 varas long
806 bundles‡ of large mantles, striped red, blue, and yellow

FOOD* [262]

400 loads of dried *axi*

OTHER TRIBUTE* [231]

1 or more live eagles, as many as were caught

It is noteworthy that the same items of tribute, though in lesser quantities, were given annually in early colonial days to the Spanish masters of Oxitipan. 177 651

CLOTHING

9 "sauanas"

FOOD

30 loads of axi
9 jars of honey
... maize

---

* *ENE*, 10: 126. † Corrected from 2,000. ‡ Corrected from 800.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

177
651

OTHER GOODS

. . . cotton
60 deerskins[9]

15. Ctzicoac

SOURCES OF THE MAP

635 The province of Ctzicoac (Tziccoac would be a less eccentric spelling)
114 is represented on the last, damaged page of the *Matricula* as it survives today, that is, on page 28, the following leaf being lost. Fortunately, this badly damaged leaf was copied and preserved for us long ago in the *Codex Mendocino* (fol. 54'). This former province of the Empire of the Mexica, which contained five principal towns, is now divided between northern Hidalgo and Veracruz, together with a small corner of San Luis Potosí. The present map is based on the "Millionth Map"
[128] of the American Geographical Society, sheet "San Luis Potosí," which gives the following equivalents:

103

MENDOCINO	MILLIONTH MAP
Cozcatecutlan, 1	Coxcatlan
Ctzicoac (?), 5	[See Remarks on Towns]
Molanco, 7	[See Remarks on Towns]
Xocoyocan (?), 6	[See Remarks on Towns]
Ychcatlan, 3	Ixcatlan

We may add Tampatel, near Tantoyuca—Number 79 of the complete list of Empire conquests—and Tamapachco (8), Number 88. These were conquered by Axayacatl and Tizoc respectively. It is
[648] probably safe to fill in the map with Chapulhuacan (2) and Huexotla de Hidalgo (4), which warred with independent Metztitlan.[10]

REMARKS ON TOWNS

632 *Cozcatecutlan* is assumed to be the modern Coxcatlan near Tancan-
131 huitz, though it is mentioned in the "Anales de Cuauhtitlan" along with towns of the Chicontepec area. Indeed, if it fell in Chicontepec, the whole eastern half of this province would be doubtful, and the question of the northern boundaries of Metztitlan, as well as that of Mexican communication with Oxitipan, would remain open.

[9] *PNE*, 1: No. 424.
[10] "Relación de ... Metztitlan," p. 223, and *PNE*, 6: 188.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Ctzicoac, which is also called Xiuhcoac, Tziuhcoac, and Cicoaque, is another difficult problem. Meade[31] would locate it in or near the present Chicontepec; Melgarejo[32] presents considerable evidence that it is the modern Dr. Montes de Oca, formerly called San Isidro. The writer regards the problem as not yet completely solved, and prefers to indicate both possibilities on the map.

Huexotla de Hidalgo, which carried on war with Metztitlan, had Náhua gods and a cacique with a Náhua name. Geographic logic and the wars alluded to would place it within the Empire, though there is no absolute evidence that it was included. As the myopic "Relación de Huexotla" speaks only of the local chief, this town may possibly have been an independent city-state.[33]

Molanco is identified by Melgarejo as a "congregación de 159 habitantes en Izhuatlan de Madero." This seems to have been formed from a pre-Hispanic Tecpan Molanco, four leagues distant[34]—direction not specified. Tecpan Molanco is probably the *Matricula* pueblo and is mentioned in the "Anales de Cuauhtitlan." A homonym formed an integral part of the señorío of Metztitlan, according to the relación of that town.

Tamapachco, a hybrid Huaxtec-Náhua word, appears in the conquest lists of Tizoc. Since the subjugation of this town is mentioned jointly with the conquest of Miqyetlan (Mictlan), Tamapachco is presumably the modern Temapache. A homonym lying southwest of Aquismon was still called Tamapach in the eighteenth century.[35] We have put the northern frontier in this region at Temapache, though recognizing that Bernal Díaz speaks of a map in Moctezuma's possession which depicted the coast as far as Panuco.

NATURE OF THE PROVINCE

Inhabitants and languages.—As in the central Balsas basin, the Mexica could not or would not conquer the hot lowlands. The Río Panuco and its tributaries, the Moctezuma and Chicayan, lay outside the Em-

[31] *Op. cit.*, p. 290.

635 pire, in territory governed by the aboriginal Huaxtec. Huaxtec was
648 spoken in the northern part of Ctzicoac Province, and Náhuatl (in
197 recent times, at least) in the south.[26] The Huaxtec people, generally
105 speaking, possessed a high and very old culture, inherited from legendary sea-borne founders.[27] Sahagún gives voluminous data on the Huaxteca, of which we quote a part:

> . . . they wore their hair dyed different colors, some yellow, others red, and others varicolored . . . they all had sharp teeth because they sharpened them on purpose; they wore for ornament gold bracelets on their arms, and half-boots made of feathers on their feet, and jade bracelets on their wrists . . .

together with feather headdresses and fanlike collars. "The defects of the Cuexteca," he adds, "are that their men do not cover their shameful parts with loincloths, though there is a great quantity of clothing among them. . . ."[28]

635 *Provincial borders in 1519.*—To the south of Ctzicoac lay the inde-
131 pendent principality of Metztitlan, with its old Náhua speech and gods. To the east were Atlan and Tuchpa, Empire provinces acquired at about the same time as Ctzicoac, and to the north an obscure "Chichimec" frontier.

635 *Regional names.*—Ctzicoac lay in the Huaxteca, a region more
103 properly known as "Cuextlan."[29] This region is also called "Tonacatlalpan," "the land of foodstuffs," and "Xochitlalpan," "place of flowers."[30] One rather corrupt document speaks of Ctzicoac as "Tizcohuacalaotl" ("Tzicohuacaloth"?).[31]

TRIBUTE

651 *Tribute of the whole province.*—According to the *Matricula,* Ctzicoac and her subject towns gave this tribute to the Mexican masters:

CLOTHING

[291] 400 bundles of white mantles with red, blue, and yellow borders**
400 bundles of loincloths**

---

[26] Jiménez Moreno and Mendizabal, "Distribucción prehispanica de las lenguas indígenas de México."

[28] *Ibid.*, pp. 131–132. Meade (*La Huaxteca: Epoca Antigua* [1942]) gives the best general résumé of the province.

[29] Sahagún, *Historia general de las cosas de Nueva España* (1938), III: 130.

[30] *Ibid.*, p. 131.

[31] Ixtlilxochitl, *Obras históricas* (1892), II: 196.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651

808 bundles* of large white mantles, 4 brazas long** [291]
400 bundles of women's skirts and blouses** 714
2 warriors' costumes with shields*

FOOD

400 bundles of dried chili peppers* [262]

OTHER GOODS

800 bundles of cotton* [248]

Another version of this tribute specifies the following annual payments:

CLOTHING

1,800 bundles of mantles for use as carpets, with varicolored stripes [291]
..... plain mantles
..... women's skirts and blouses
100 bundles of "twisted" mantles, 8 brazas long and 3 *piernas* wide
100 bundles of thin mantles, 4 brazas long ("which altogether comes to forty thousand pieces")
200 bundles of loincloths

FOOD [262]

100 loads of chili peppers
100 loads of little peppers

OTHER GOODS

400 *petacas* [petates?] [285
400 deerskins 281
100 live deer 231
100 large (live) parrots 237
40 bags of white feathers for weaving
40 bags of varicolored feathers

Besides this, servants were provided for the overlords.* [357]

* Corrected from 800.

* Ixtlilxochitl, *Obras históricas* (1892), II: 197. The province of "Tizcohuscalaotl" paid "en cada un año de tributos mil y ochocientos fardos de mantas así de las ricas betadas de todos colores, que servían para entapizar las salas y cuartos del rey, como de otras llanas, enaguas y huepiles, sin más cien fardos de mantas de Tlacatziuhque [Ilacatziuhque, Molina: cosa torcida] de á tres piernas, que tenía de largo cada una de ellas ocho brazas, y otros cien fardos de las más delicadas y primas de á cuatro brazas, que las unas y las otras venían á ser cuarenta mil piezas, sin más cuatrocientos petacas y cuatrocientos pellejos de venado, cien venados vivos, cien cargas de chile y cien cargas de pepitas, cien papagayos grandes, cuarenta costales de pluma blanca con que hacían telas, y otros cuarenta costales de plumería de aves de diferentes colores, sin más doscientos fardos de pañetes, que venían á ser cuatro mil, con las amas y criadas necesarias para el servicio de palacio."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

16. Tuchpa

SOURCES OF THE MAP

635 114 The *Matricula* leaf containing Tuchpa Province upon its verso was one of the two leaves carried to Philadelphia a century ago.[26] It is copied on folio 52' of the *Codex Mendocino*. The seven towns of Tuchpa [128] Province now form part of north-central Veracruz State. The present map is based on the "Millionth Map" of the American Geographical Society, sheet "San Luis Potosí." The *Mendocino* names which have been located appear below:

103

MENDOCINO	MILLIONTH MAP
Mishuaapā, 4	Miahuapam
Mictlan, 3	[See Remarks on Towns]
Papantla, 6	[No change]
Tuchpa, 2	Tuxpan
Çihuateopa, 5	[See Remarks on Towns]

Two towns of the *Mendocino* list remain unlocated: Oçelotepec and Tlatiçapā.

To these we may safely add the town of Tenexticpac (1).

REMARKS ON TOWNS

632 *Mictlan* is "heute ein Weiler bei Castillo de Teayo" (a), according to 131 Lehmann.[27] It is called "Miquetlan" or even "Miquiyetlan" in certain ancient documents.[28]

Oçelotepec might be the modern Ozuluama, north of the frontier which we give, but this remains to be established.

Papantla claimed to have been independent until reduced by Moctezuma II[29]—an assertion which agrees with reports of the rebellious conditions Cortés found on the east coast. The jurisdiction of Papantla

[26] See Introduction, p. 7.

[27] Lehmann, *Die Geschichte der Königreiche von Colhuacan und Mexico* (1938), p. 308, n. 2. On the famous fortifications at Castillo de Teayo (a), possibly a garrison of the empire we are describing, see Seler, *Gesammelte Abhandlungen zur Amerikanischen Sprache- und Alterthumskunde* (1902–1923), II: 272 and III: 410–449.

[28] Lehmann, vs. 1348 D5, and the conquest lists of Tizoc.

[29] RHE, 1: 488: "tenian estos yndios antiguamente un governador puesto por monteçuma que los tenia en paz y que antes que monteçuma naçiese ni eredase este rreyno no estuuan estos yndios subjetos al padre de monteçuma ni á otra persona y que tenian guerra con el y defendian sus tierras ... y que despues vinieron dende á muchos años que ya estuvan cansados de defender sus tierras é terminos se dieron briamente á monteçuma."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

reached to the limits of that of Xonoctla in the adjacent province of 632
Tlatlauhquitepec.[*] 131

Tenexticpac appears in the Mexican conquest lists as number 78.

Tuchpa is also called Tomilco (? Tochmilco) in some documents in the *Suma de visitas de pueblos* ... (*PNE*, 1: Nos. 449 and 525).

Çihuateopa has been located by Krickeberg (*Los totonaca* [1933], p. 110), who identifies it with Cihuatitlan.

NATURE OF THE PROVINCE

Inhabitants and languages.—Like Ctzicoac, northern Tuchpa Province 197
belonged to the Huaxteca. The south was different. Papantla was, and 635
still is, a focal point of those who spoke Totonac. The elaborate ruins 648
of that region (El Tajín) are the source of much debate; however, they are clearly linked with Teotihuacán.[**] As noted above, Papantla was first subjected to the Empire by Moctezuma II, whereas Tuchpa was one of the towns long tributary to the Acolhuaque of Texcoco.[**]

Provincial borders in 1519.—To the east of Tuchpa lay the province 635
of Ctzicoac, to the southeast the tiny province of Atlan, and to the 131
south the provinces which cut Tlaxcala off from the sea. Beyond the northern frontier were the unconquered Huaxtec peoples.

Regional names.—The regional names given under the section "Ctzi- 635
coac"[2] are equally applicable to Tuchpa. The south, however, formed 103
part of the Totonac country, Totonacapan.

TRIBUTE

Tribute of the whole province.—Tuchpa Province was wealthy, espe- 651
cially in textiles. She paid the following to her overlords, according to the *Matricula:*

CLOTHING

400 bundles of black-and-white checked mantles** [291]
400 bundles of red and white mantles**
400 bundles of loincloths**
808 bundles[*] of large white mantles, 4 brazas long**

[*] RHE, 1: 487.
[**] Cf. Palacios, *La cultura totonaca* (1941), and the valuable bibliography of García Payón, *Interpretación ... de el Tajín* ... (1943).
[**] Ixtlilxochitl, *Obras históricas* (1892), II: 197.
[*] Corrected from 800.

1 [p.58.—Analyst] 2 [p.56.—Analyst]

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

[651]
[291] 816 bundles[*] of orange-striped mantles, 8 brazas long[**]
408 bundles[*] of large white mantles, 8 brazas long[**]
402 bundles[*] of mantles striped red and yellow[**]
400 bundles of women's skirts and blouses[**]
240 bundles of rich mantles in three styles[**]
[714] 2 warriors' costumes with shields[*]

FOOD[*]

[26] 800 loads of dried chili peppers

OTHER GOODS[*]

[23]
301] 20 bags of small white feathers for decorating mantles
2 strings of chalchiuites
1 string of turquoises
2 disks of turquoise mosaic

Another source, which magnifies the seven towns into seven prov-
[114] inces in the "gran provincia de Tochpan"[*] (seventy-eight pueblos in all), gives the following version:

CLOTHING

[291] 1,580 bundles of mantles
25 mantles and *huipiles*
400½ bundles of "twisted" mantles, 8 brazas long
400½ bundles of thin "twisted" mantles, 4 brazas long

This is summed up as 47,645 articles of clothing, a smaller figure
[357] than that given by the *Mendocino*.[*] Perhaps we have here the tribute of the cabecera alone. Servants were also supplied, we are told.[*]

Still other sources give more details concerning items included in the opulent tribute of Tuchpa Province, among them a kind of mantle called "Tuchpanecayotl."[*]

---

[*] Corrected from 800.
[**] Corrected from 400.
[*] Corrected from 400.
[*] Ixtlilxochitl, *Obras históricas* (1892), II: 197. It is interesting that the number seven is given, which corresponds to the number of towns known to us from the *Mendocino*.
[*] The total number of pieces of clothing from Tuchpa Province specified in the *Mendocino* is 85,480.
[*] Ixtlilxochitl, *Obras históricas* (1892), II: 197: "En la gran provincia de Tochpan puso por su mayordomo á Huchotli, que cobraba en cada un año de las mantas del género atrás referido, mil quinientos y ochenta fardos, y mas veinticinco mantas y huepiles, sin más cuatrocientos fardos, y más diez mantas de ilacatziuhqui [Molina: cosa torcida] de a ocho brazas, y otros tantos fardos de mantas de ilacatziuhqui delgado de a cuatro brazas, que por todo venían á ser cuarenta y siete mil seiscientos cuarenta y cinco mantas, enaguas y huepiles, piezas de ilacatziuhqui y pañetes sin más las ropas de palacio y criadas que eran necesarias para el servicio. La gran provincia de Tochpan se dividía en siete provincias, que contenían todas ellas sesenta y ocho pueblos a ellas sujetos."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

 651

Tribute of the component towns.—Papantla paid a tribute of mantles, little peppers, maize, and chili.[]

632

17. Atlan

SOURCES OF THE MAP

On page 27 of the *Matricula*, which is copied as folio 53' of the *Codex Mendocino*, appears a province of two towns, the second such province which we have encountered.[] In the former codex, one place glyph is identified as "Atla" (1); the other is left unnamed. In the *Mendocino* they are identified as "Atlan" and "Teçapotitlan." The town of Atlan appears at the northern tip of Puebla State, in the atlas of the Secretaría de Agricultura y Fomento. Both are listed among the very numerous tributaries of Huauchinango, four leagues distant, in one document which gives Atlan one hundred and fifty tributaries and "Çapotitlan" ten only.[] Elsewhere both are said to be of the *partido* of Metaltoyuca (2). In the latter document Teçapotitlan is also called "Valpopocatlan."[]

635 114

NATURE OF THE PROVINCE

Provincial borders in 1519.—Atlan and Teçapotitlan were apparently the great Mexican bulwarks of the northeast. These two towns are treated in the same way as are Xoconochco, at the southern extremity of the Empire on the Pacific, and Oztoma, on the west, in that the glyph of each town appears on a preliminary leaf of the *Matricula* accompanied by the glyph of a special governor, who held the rank of "tlacochcalcatl," or "tlacochtectli," as the *Mendocino* annotator puts it. Atlan and one other province (Quechaltenanco, in Guerrero) each had but one governor; the five other regions distinguished in this manner each had two.

635 131

Bernal Díaz speaks of a garrison which seems to be that of Atlan, when he refers to "...otra capitania...a la rraya de panuco, Entre tuçapan [? Tuchpa] y vn pueblo que le pusimos por nonbre almeria [Nautla], ques En la costa del norte...."[]

[] RHE, 1: 488: "tributabanle mantas y pepinas y mahiz y chile."
[] Cf. Malinalco, above.
[] *FNE*, 3: 97.
[] *ENE*, 8: 160.
[] *Historia verdadera de la conquista de la Nueva España* (1904), I: 302. See fuller quotation from Díaz in note 1, p. 128.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 Atlan was nearly surrounded by other Empire provinces: Ctzicoac
131 to the northwest, Tuchpa to the northeast and east, and Tlapacoyan to the south. West of it lay Tototepec de Veracruz, seemingly an independent city-state.

TRIBUTE

651 *Tribute of the whole province.*—The following tribute was paid by the small frontier province of Atlan to its masters, the Mexica:

CLOTHING**

[291] 800 bundles of rich red and white mantles, bordered in red, blue, and yellow
800 bundles of loincloths
404 bundles" of large white mantles, 4 brazas long

OTHER GOODS*

[248] 1,200 bundles of cotton

18. Tlapacoyan

SOURCES OF THE MAP

635 The province of Tlapacoyan occupies page 26 of the *Matricula*, copied
114 as folio 50' of the *Codex Mendocino*. It contains the seven principal towns of a province now forming part of northern Puebla State. In the *Matricula* the cabecera alone is identified in roman letters; in the *Mendocino*, all towns are. The present map is based on the Puebla map of the Comisión Geográfico-Exploradora (1908). A list of the ancient place names, together with their modern equivalents, is given below:

[103]

MENDOCINO	1908 MAP
Acaçacatla, 7	Zacatlan
Tlapacoyan, 4	[No change]
Xiloxochitlan, 6	Eloxochitlan
Xochiquauhtitlan, 5	Xochicuatla

These three remain to be located: Aztaapan, Coapan, and Tuchtlan.

To this province may be added: Cuauhchinanco (2), Chila (3), and Xicotepec (1).

REMARKS ON TOWNS

632 *Acaçacatla* can hardly be other than the Zacatlan of today.
131 *Cuauhchinanco* was one of the fourteen cabeceras of the Acolhuaque.

" Corrected from 400.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Chila and the near-by, vanished Matlatlan we know to have been 632
tributary, from data given by their joint sixteenth-century relación.[a] 131

Tlapacoyan lies in Puebla. It appears in the official conquest lists of the Mexica along with Itzcuincuitlapilco, Tlatlauhquitepec, and other names of this region. It should not be confused with the Tlapacoyan in Veracruz, northeast of Teziutlan.

Xicotepec was an old cabecera of the Acolhuaque.

Xochiquauhtitlan, a town southeast of Tlapacoyan, Puebla, has been variously designated; its original name, after passing through the sixteenth-century variant of "Suchiguauhtla,"[b] finally became Xochicuatla.

NATURE OF THE PROVINCE

Inhabitants and languages.—Cuauhchinanco and Xicotepec were im- 635
portant towns of the Acolhuaque, as has been mentioned above. They seem to have been somewhat unfriendly toward the Mexica. In Xicotepec there exists a curious *huehuetl*, triumphantly carved with the symbol of Tenochtitlan transfixed by the spear of conquest.[c] Also, there is a codex of Huachinango, which, if it were studied and published, would provide much information on this region. Since the 635
Acolhua influence was strong, it may be assumed that most of the 197
people of Tlapacoyan spoke Náhuatl. The eastern rim of the province, however, was Totonac—"very dumb indians who don't like to do anything but eat and sleep," according to the severe "Relación de Chila y Matlatlan."[d] The elusive town of Matlatlan probably typified the acculturation of the region under Náhua influence, accepting foreign gods and fiestas, but conserving the Totonac language.[e]

Provincial borders in 1519.—Tlapacoyan was one of the provinces 635
hemming in Tlaxcala, which lay to the south. West of Tlapacoyan was 131
Atotonilco el Grande, east of it Tlatlauhquitepec, and to the north Atlan—all of them Empire provinces.

Regional names.—The eastern edge of Tlapacoyan entered the zone 635
called Totonacapan.

---

[a] RHE, 1: 481: "tenian ... governador antiguamente puesto por montezuma."
[b] *ENE*, 8: 159.
[c] Christensen, "El Teponaztli de Xicotepec," *RMEA* (1939), 3: 179–180.
[d] RHE, 1: 480: "son yndios muy tontos yaclinados á solo comer y dormir son de lengua totonaque diferente de la mexicana."
[e] See the *proceso* of the *cacique* of Matlatlan, in *Procesos contra indios idólatras*, Publ. AGN (1912), 3: 209–215.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

TRIBUTE

651 *Tribute of the whole province.*—Tlapacoyan paid the following tribute to its Mexican masters:

CLOTHING

[291 714] 400 bundles of black-and-white striped mantles**
800 bundles of large white mantles**
2 warriors' costumes*

651 632 *Tribute of the component towns.*—Acaçacatla, if we are correct in identifying it with the modern Zacatlán, gave no tribute other than a few judicious gifts.[m]

Chila paid, as might be expected from the *Matricula* leaf, a tribute of cotton mantles.[n]

19. Atotonilco el Grande

SOURCES OF THE MAP

635 114 The glyphs for Atotonilco and its five fellow towns appear on page 8 of the *Matricula* and is copied on folio 30' of the *Codex Mendocino*. There is an Empire province of Atotonilco which may be called the province of Atotonilco de Pedraza (see p. 37 above), but the one represented on folio 30' may be named after the town within it which is indicated by the *Matricula* annotator as Atotonilco el Grande—the only town he identifies on this page. The towns of this province lay in the south-central part of eastern Hidalgo. The *Mendocino*, as usual, identifies all towns, and has been compared with the modern map [128] (American Geographical Society, "Millionth Map," sheet "San Luis Potosí") with the following result:

105

MENDOCINO	MILLIONTH MAP
Acxxochitla, 3	Acxxochitlán
Atotonilco, 1	Atotonilco el Grande
Hueyapan, 5	[No change]
Quachqueçaloyã, 2	[See Remarks on Towns]
Tulançinco, 4	Tulancingo
Çtzihuinquiloca	[See Remarks on Towns]

[m] RHE, 1: 469: "no tributaban como otros pueblos mas de que quando ellos querian hazer algun presente á moctoçuma lo hazian y no otra cosa."
[n] RHE, 1: 481: "antiguamente tributauan á moctoçuma mantas de algodon."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

REMARKS ON TOWNS

Quachqueçaloyan is given as "dos leguas del mismo Atotonilco"[a] 632
and seventeen leagues from México.[b] As "Tlaquetzaloyan" it appears 131
eight leagues from Hueyacocotla.[c] It was one of two subject towns belonging to Atotonilco in the sixteenth century.[d]

Çtzihuinquiloca may be located from a literary reference, which places it southeast of Epazoyuca.[e]

NATURE OF THE PROVINCE

Inhabitants.—Tulançinco, in this province, was a town of great antiq- 635
uity, a former center of the Toltecs of Tula, Hidalgo. Sahagún com- 175
ments on the ruins at Tulançinco in the same breath with those of Tula itself and of Xochicalco.[f] These ruins have only recently been surveyed.[g] Tulançinco eventually became an important garrison town of the Acolhuaque,[h] and it was from this point, according to Tezozomoc's *Crónica mexicana* (p. 312), that the conquest of the Huaxteca was launched.

Provincial borders in 1519.—The province of Atotonilco el Grande 635
lay between two *tierras de guerra.* To the north was Metztitlan, and 131
probably a second city-state (Tototepec de Veracruz); to the south was Tlaxcala. East and west, however, were other Empire provinces, Tlapacoyan and Hueypuchtla.

TRIBUTE

Tribute of the whole province.—The tribute of the province of Atoto- 651
nilco el Grande to its overlords in Mexico is given below:

CLOTHING [291
800 bundles of rich mantles** 714]
1,600 bundles of mantles of white nequen**
4 warriors' costumes with shields*

[a] *PNE*, 3: 91.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651
[262]

FOOD

4 wooden bins (1 each of maize, beans, chian, and huauhtli)*

632
651

Tribute of the component towns.—Atotonilco el Grande, in the mid-sixteenth century, gave six hundred *hanegas* of maize annually and twenty-six hanegas of wheat. Quarterly it paid twenty-five women's skirts and twenty-five blouses, as well as fish, quail, chicken eggs, kindling, personal services, and a host of minor items.*

20. Acolhuacan

SOURCES OF THE MAP

635
114

The province which is represented on page 3 of the *Matricula* is depicted on folios 21' and 22' of the *Codex Mendocino* copy. It contained twenty-six pueblos worth enumerating. Several of the glyphs are almost obliterated in the *Matricula*, which identifies four towns in roman letters. Three of these identifications—Ixquemaca, Ahuatepec, and Cempoala—agree well enough with the *Mendocino*, which identifies all the towns, but the name of the cabecera is quite different in the two manuscripts. The *Matricula* calls it "Acolman"; the *Mendocino* calls it "Acolhuacan." In the ensuing discussion, Remarks on Towns, the problem is considered. This province lay mostly within the territory now included in the State of Mexico, northeast of Lake Texcoco,
[28] but projected a short distance into Hidalgo. With the 1937 map, "Valle de México" (Secretaría de Agricultura y Fomento), used as base, more than half the towns of this province have been identified:

103

MENDOCINO	1937 MAP
Acolhuacã, 23	[See Remarks on Towns]
Aztaquemeca	[See Remarks on Towns]
Cenpoalan, 5	Zempoala
Ecatepec, 15	[No change]
Epaçoyucã, 2	[See Remarks on Towns]
Huiçilan, 9	Huitzilac
Matixco, 14	Maquixco
Tescalco, 11	[See Remarks on Towns]
Temazcalapã, 10	Temazcalapan
Tepechpa, 16	Tepexpan

* *PNE*, 1: No. 21: "Y da mas seysçientas hanegas de maiz cada año y siembran veinte y siete hanegas de trigo, y dan veinte e cinco naguas y otras tantas camisas cada ochenta dias."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

MENDOCINO	1937 MAP
Tepetlaoztoc, 18	Tepetlaoxtoc
Teçoyucã, 17	Tezoyuca
Tiçayucã, 8	Tizayuca
Tlaquilpã, 3	[See Remarks on Towns]
Tonanytla, 12	Tonanitla

Various pueblos of this crowded province remain to be located:

Ahuatepec	Quauhyocan
Ameyalco	Tepetlapã
Calyahualco	Tiçatepec
Contlan	Tlachyahualco
Quauhq̃mecã	Totolçinco

Yxqueme

Certain other pueblos may be added to the province on the basis of other documents:

Acolman (a)	Pachuca, 1
Coatepec Chalco, 22	Teotihuacan, 13
Chicualoapan, 21	Tepepulco, 7
Chimalhuacantoyac, 20	Tetlyztaca, 6
Otompan, 24	Tezontepec, 4

REMARKS ON TOWNS

Acolman (a) was independent until conquered by Nezahualcoyotl of Texcoco.[*] 632

Acolhuacan is something of a problem. The present paper is hardly the place to pass upon the truth of reports that Texcoco, capital of the Acolhuaque, paid tribute to the Mexica as did any other vassal. But a choice is imperative here: does the glyph which is annotated Acol*man* and Acol*huacan* represent Acolhuacan Texcoco?

The answer is a certain no. It is doubtful that Texcoco ever paid the famous tribute, in the first place. The other member of the Triple Alliance, Tlacopan, does not figure as a tributary anywhere in the *Matricula*, and it was less powerful than the domain of Nezahualpilli. The *Mendocino* interpreter has not written Texcoco, nor does the glyph correspond to those commonly used for Texcoco.[*] And the contradictory *Matricula* legend has been written over, as if to avoid 632 114

[*] "Nezahualcoyotzin cuique de Texcuco, los tiraniso" (*PNE*, 6: 211). (1942), fig. I.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 one interpretation, at least: the word "tetzcocatl" has been altered in
114 two places to read "acolmecatl"; that is, "men of Texcoco" has been erased. Further evidence that Acolhuacan was neither Acolmàn nor Texcoco may be found in the lists of conquests in which Huitzihuitl and Itzcoatl participated.

If the glyph does not represent Acolhuacan Texcoco, what Acolhuacan does it mean? Discarding a vague possibility that it may be Acolman, site of the great monastery,[a] the writer prefers to follow the "Relación de Coatepec-Chalco," which informs us explicitly that Acolhuacan is a former name of Coatlichan.[b]

632 The *Mendocino* adds the name of the tribute collector, or "calpixqui," to the place name: it was (rather suspiciously) "Acolmecatl."

Aztaquemeca (not on the map) lay athwart Cortés' escape route after the Noche Triste. His itinerary, as given in Sahagún and in the "Lienzo de Tlaxcala," reads Tepotzotlan–Aztaquemecan–Zacapulco–Tonanixco, and finally, friendly Hueyotlipan. Aztaquemeca may be the Ixtacamecan Santo Domingo, half a league from Otumba (24).[c]

Coatepec Chalco bore a "very special enmity" toward Chalco, to the south,[d] which is enough to align it on our map with the province of Acolhuacan.

Chicualoapan "and its subjects were subject to the caciques and lords of the pueblo and cabecera of Coatlychan."[e]

Chimalhuacantoyac had once belonged to the ex-province of Chalco, but was annexed by "the province of Aculhuacan, which is Coatlychan."[f]

Epaçoyucan, which can be found on the Hidalgo map of the Secretaría de Agricultura y Fomento atlas, was earlier called Tomazquitlac. It belonged to Acolhuacan from a very early date.[g]

---

[a] For this possibility, see *PNE*, 6: 213, n. 2.

[b] *PNE*, 6: 80: "Coatlychan, que en aquel tiempo se dezia Aculhuacan ... ." See Chimalhuacantoyac, below.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Matixco (Maquixco), southwest of Teotihuacan, possesses a homonym, Maquixco Santa Maria, northeast of the same center. Either one of these may be the *Matricula* town. The choice which has been made is frankly arbitrary. 632

Otompan, now Otumba, was the scene of Cortés' last great battle with "los de Culua" as he escaped into Tlaxcala, the frontiers of which lay near by.

Pachuca (1) at first belonged to the Acolhuaque, and later was shared by them with the Mexica.[30]

Quauhyocan appears in another source as "San Marcos Quacyocan" and "Quauhyoca." It was subject to Acolman, but no further detail is given.[31]

Teacalco appears on the map of the State of Mexico of the Secretaría de Agricultura y Fomento atlas.

Teotihuacan, at first a Chichimec republic in the Tepanec sphere, was conquered by Nezahualcoyotl—who eventually had to share it with the Mexica.[32]

Tepepulco "parte terminos" with Tulançinco, in the adjacent province of Atotonilco el Grande, and Hueyotlipan, pertaining to enemy Tlaxcala.[33] Paso y Troncoso has pointed out Tepepulco's close association with Texcoco.[34] It was in Tepepulco that Sahagún began to gather materials for his vast ethnographic work.[35]

Tetlyztaca may be located from references. According to the "Relaciones históricas estadísticas" (1: 151), Tulançinco was four leagues to the [north]east, Tepepulco two leagues to the southeast, and Cenpoala one and one-half to the west: "... los pueblos comarcanos son tulançingo cuatro leguas acia levante tepeapulco dos leguas entre leuante y sur la congregación de Cenpoala legua y media cay açia el poniente." Tetlyztaca lay near Tepechupilco [? now Tepechichilco]. [13]

[30] Cf. n. 82 below.

[35] Sahagún, *Historia general de las cosas de Nueva España* (1938), I: xvii.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 *Tezontepec* was founded by order of the señor of Texcoco.[70] There is a homonym in the province of Axocopan.

Tlachyahualco appears in a few references as "Santana Tlachahualco," subject to Tepexpa. These are not adequate for locating it.[71]

Tlaquilpan appears on the Hidalgo map of the Secretaría de Agricultura y Fomento Atlas.

NATURE OF THE PROVINCE

648 635 *Inhabitants and languages.*—Acolhuacan Province was the heart of the late Chichimec Empire, one of the elements out of which the Triple Alliance was formed. As a consequence, virtually all the towns of the province were subject to Texcoco until the decline of that city-state, when some passed to Mexico. Memory of this change in ownership was preserved in such northern pueblos as Cempoala, Tlaquilpa, Pachuca, and Temazcalapa in the 1580's, as well as in Tezontepec, México.[72]

197 We also have some data on the shifting linguistic picture through the centuries. The obscure Chichimeca language spoken under the first lords of Acolhuacan was abandoned in favor of Náhuatl and Otomí, though it did not die out altogether.[73] The Náhuatl of Texcoco was considered the touchstone of elegance in the period of the European invasion.

635 *Provincial borders in 1519.*—All along the eastern frontier of the 131 province of Acolhuacan lay independent Tlaxcala, a former ally which had become an enemy. The western and northern boundaries of Tlaxcala are drawn roughly on our map. The other neighbors were all Empire provinces: Atotonilco el Grande to the north, Hueypuchtla and the lacustrine provinces to the west, and Chalco to the south.

[70] RHE, 1: 152.

[71] *PNE*, 3: 44, n.; 6: 209.

[72] Cf. n. 82 below.

[73] The "Relación de Epaçoyuca" says that "los primeros fundadores de este pueblo hablauan lengua chichimeca porque su generacion eran chichimecos y despues hablaron sus hijos la lengua mexicana y hablan en general la lengua mexicana aunque ay algunos otomites advenedizos que hablan su lengua otomita y ay algunos chichimecos que hablan la lengua chichimeca" (RHE, 1: 141). The relación of Tetlyztaca observes: "la lengua es otomite advenediços de poco aca se fundaron por mandado del señor de texcuco muy pocos hablan la lengua mexicana" (RHE, 1: 152). On the supplanting of Chichimeca by Náhuatl, see Ixtlilxochitl, *Obras históricas* (1892), *passim*.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

TRIBUTE 651

Tribute of the whole province.—Acolhuacan Province is said to have given the following tribute:

CLOTHING [291]

2,000 bundles of large white "twisted" mantles**
1,200 bundles of rich thin mantles, in three styles**
400 bundles of loincloths** [714]
400 bundles of women's skirts and blouses**
121 warriors' costumes with shields ("one fine piece")***

FOOD [263]

4 wooden bins (1 each of maize, beans, chian, and huauhtli)

Tribute of the component towns.—Acolman (a) rendered tribute 632 of henequen garments, in bundles of twenty, every quarter, and 651 maguey leaves for fuel, but, to judge from a statement in the *Papeles de Nueva España* (6:213), this seems to have been destined for the local cacique.

Cenpoalan at first gave obsidian knives for war clubs to Texcoco. [412] After passing into Mexican hands it gave a canoe annually, and then, in the time of Moctezuma's predecessor, fowl and other things.[11]

Epaçoyucan and adjacent towns paid only obsidian knives until [412] Ahuizotl enlarged the temple of Huitzilopochtli and increased tribute demands generally. Thereafter they paid mantles and maize and domestic fowl.[12]

** Corrected from the *Mendocino* version: 103 pieces, 3 fine.

[11] RHE, 1:131: "estos quatro pueblos y sus sujetos eran en tiempo de su gentilidad del señor de tetzcuco netzavvalcoyotzin andando el tiempo y siendo señor en mexico ytzcohuatzin pasaron los pueblos de senpuala y tlaquilya y tecpilpa al señor de mexico solamente tzaquala se quedo en el senorio que sobre ellos tenia y reconocian siempre el Reyno de tetzcuco Reyno de aculhuaca tributaban nabajas con que hazian macanas y despues andando el tiempo y siendo señor en mexico ytzcohuatzin mucho tiempo no tributaron nada sino solamente cada año llebaban vna canoe a mexico hasta que en tiempo de ahuitzoctzin antesesor de monteçuma fue el primero que mando tributasen muytas gallinas y todo genero de bolateria [this for a new temple] como sucedio Monteçuma en su lugar no quiso personarlos tributos."

[12] RHE, 1:142: "eran del señorio de tezcuco ... no tributauan nada solamente nabajas con que hazian macanas y siendo senor en mexico ytzcohuatzin pidiole al señor de tezcuco que no tenia muchas tierras que le diese algunos pueblos de la comarca de mexico entonces se dividió este pueblo porque gozase tambien el señor de mexico las nabajas la mitad llevó el de tetzcuco y otra mitad el de mexico y entró tambien otros pueblos debaxo del señorio de mexico como cenpohuala tlaquilpa pachuca teçontepec y tenancalapa todos estos pueblos pasaron a mexico y estos pueblos ayudauan a sacar nabajas y no tenian otro tributo hasta que vino a señorear el antecesor de moteçoma que

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 Teotihuacan gave quarterly tribute of thick henequen mantles called
651 "ichtilmatl" and maguey leaves for fuel.[88] However, the *Tratado del principado ... de San Juan Teotihuacan*[89] gives much ampler detail.

Tepechpa preserved the memory, in 1580, of various stages in its evolution as a tributary. At first its people paid their cacique products of the chase, then mantles of various sorts, and finally, *circa* 1450, a quarterly tribute of cotton mantles (fifty mantles, four *piernas* wide and eight *braças* long; thirty-four *braças* long and four *piernas* wide; and forty more of *tochomitl* style) as well as twenty loads of cacao
[262] of Xoconochco (2,400 beans to the load), twenty loads of chile, and twenty of little peppers.[90]

[326] Tepetlaoztoc, as we see from the handsome *Codex Kingsborough*, gave rich articles of goldwork to its first colonial overlords—obviously a continuation of a long tradition.

Tetlyztaca paid henequen mantles "because they are poor people."[91]

---

se llamava ahuitzotzin quiere decir nutria este fue el que mandó que tributasen mantas y mahiz y gallinas para hacer una fiesta quando acabó el templo del ydolo que llamauan huitzilopochtli desde entonces començaron los tributos deste pueblo y toda la comarca." Cf. n. 81 above for a similar case.

[88] *PNE*, 6: 221: "cada ochenta dias: algunas mantas de nequen gruesas que llaman ichtilmates y algunas cargas de pencas de maguey de esas que llaman metloni."

[89] Guzmán, "Un manuscrito de la colección Boturini ...," *Ethnos* (Stockholm, 1938), 3: 94.

[90] *PNE*, 6: 234: "cinquenta años antes del rreynado de Montezuma cada ochenta dias le tributauan cinquenta mantas de algodon de quatro piernas en ancho y ocho braças en largo, y otras treinta mantas de algodon de quatro braças en largo y quatro piernas de ancho, y otras quarenta mantas labrados de tochomytl para bestirse (cf. Atotonilco de Pedraza, p. 40), y beinte cargas de cacao de a beinte e quatro myll cacaos carga, de zoconosco, y quarenta naguas y otros tantos guipiles y beinte cargas de chile y otras tantas de pepitas."

[91] RHE, 1: 152.

V. THE OLD ACOLHUA DOMAIN: THE SOUTHWEST

THERE is a variety of evidence for ascribing a principal role to the Acolhuaque in the parts of Morelos and Guerrero we are about to examine. A list of towns paying tribute to Texcoco[1] names nine towns of the Cuernavaca area—a situation fully confirmed by Ixtlilxochitl, who relates the invasion of this region by Empire troops and adds, "cupieron á Nezahualcoyotzin con la cabecera de Quauhnahuac nueve pueblos."[2] (Some of these nine pueblos are in Quauhnahuac Province; others, however, are in adjacent Huaxtepec.) Ixtlilxochitl also tells how Nezahualcoyotl overran Tlalcoçauhtitlan and placed a governor over it.[3] 631 648 175

To the nucleus of three provinces (Quauhnahuac, Huaxtepec, and Tlalcoçauhtitlan) which the Acolhuaque certainly dominated, two others have been added (Chalco and Quiauhteopan). Their inclusion in this section is based on inference, a wish to maintain symmetry, the need of avoiding too many subdivisions, and the absence of conflicting evidence. It may be a great indiscretion. [128]

21. CHALCO

SOURCES OF THE MAP

On the nineteenth page of the *Matrícula* and folio 41v of the *Codex Mendocino* appears the province of Chalco, containing six principal towns, which lay in the south of the Valley of Mexico and reached down to the Valley of Morelos. Chalco is a province which presents several problems. Documents are curiously lacking, despite the great pre-Hispanic importance of the province. There is no sixteenth-century relación, for example, and maps of today are not very useful, but on the 1927 map of the "Estado de México" three of the towns have been identified, as follows: 635 114 [128]

MENDOCINO	1927 MAP
Chalco, 1	Tlalmanalco
Quauhxumulco, 2	Cuajomulco
Tepoztlan, 3	Tepoztlan

[103]

[1] Lehmann, vs. 1343.
[2] Ixtlilxochitl, *Obras históricas* (1892), II: 196.
[3] Quoted in n. 36 below.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 Three others remain to be found: Malinaltepec, Tecmilco, and
103 Xocoyoltepec.

REMARKS ON TOWNS

632 *Chalco* itself is the first problem, for the same name appears on a pre-
[114] liminary leaf which is included in the *Mendocino* copy but must have been lost from the *Matricula*. There were really four Chalcos, and the writer has chosen to identify that on page 19 of the *Matricula* with Chalco-Tlalmanalco, rather than with Chalco-Atenco. (See p. 128, where Chalco-Atenco figures in the Çitlaltepec tribute zone.)

Malinaltepec is mentioned in the chronicles of Chalco as a near-by place seized by Moteczuma II in 1508 or 1509.[4]

Tecmilco is not identifiable as a town, but I am informed by Sr. Ezequiel Linares, of Tepoztlán, Morelos, that the name lingers as that of a plain, south of Tepoztlán.

Tepuztlan also appears twice in the codices discussed. Here we probably deal with the well-known town near Cuernavaca; the homonym is dealt with under Huaxtepec (23). This decision is based in part on the existence of the place name Tecmilco south of Tepoztlán, Morelos.

Xocoyoltepec appears in the Chalcan annals as belonging especially to Axayacatl of Mexico Tenochtitlan in 1480: it was near Amaquemecan (Amecameca) and in 1606 was given to the people of San Miguel.[5]

NATURE OF THE PROVINCE

101 *Inhabitants and languages.*—The Chalca formed one of the tradition-
197 ally Náhuatl-speaking tribes supposed to have been companions during the migration period. They were closely related to the Xochimilca, whose territory they adjoined. Until a very late period they challenged Mexican power in the Valley.

635 *Provincial borders in 1519.*—The province of Chalco (-Tlalmanalco)
131 faced eastward on Tlaxcala, the great volcano forming a natural

[4] *Anales de ... Chimalpahin*, pp. 178 and 180.

[5] *Ibid.*, pp. 16 and 144.

[6] Durán, *Historia de las indios de Nueva España* (1867–1880), I: 11: "la generacion Chalca ... se juntó con el de Xuchimilco y partió terminos con él quieta y pacificamente: tomó per cabeçera y principal asiento á Tlalmanalco, y de allí se dividieron ... á saber: Amecamecan, Tenango con todos los Quauxulipas, Ayoczinco, Chalco Atenco, San Martin ... lo qual es mucho menos que lo que Xuchimilco ocupó per ser mucha mas gente la de aquel tribu que la deste otro."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

frontier. To the south was Huaxtepec, to the southwest Quauhnahuac, and to the north the jigsaw-puzzle provinces of the heart of the Empire. 635 131

TRIBUTE

Tribute of the whole province.—The province of Chalco gave the richest food tribute of the whole Empire: 651

CLOTHING

800 large mantles**
2 warriors' costumes with shields* [291 714]

FOOD*

6 wooden bins of maize
2 wooden bins of beans
2 wooden bins of chian
2 wooden bins of huauhtli [262]

22. Quauhnahuac

SOURCES OF THE MAP

The fourth page of the *Matrícula* shows us a series of towns headed by Quauhnahuac, a name the Spaniards, in an unfortunate jest, changed to Cuernavaca.[1] This province now forms the western half of the State of Morelos, with a very minor prolongation south into Guerrero. There are sixteen of these town glyphs, all of which are copied in the *Mendocino* on folio 23', with the tribute lists running over onto folio 23". The *Mendocino* annotator seems to have made one of his rare slips, identifying one of the glyphs wrongly, as shown below. The map of this province is based on the 1910 "Carta General del Estado de Morelos" (Comisión Geográfico-Exploradora), on which the following towns have been located: 635 114 [128] 103

MENDOCINO	1910 MAP	MENDOCINO	1910 MAP
Acatlyepac, 4	Acatlipa	Quauhnahuac, 2	Cuernavaca
Amacoztitla, 14	Amacuzac	Teocalçinco, 17	Teocalzingo (Gro.)
Atlicholoayan, 9	Atlacholoaya	Xiuhtepec, 3	Xiutepec
Coatlan, 7	Coatlán del Río	Xochitepec, 6	[No change]
Chimalco, 16	Panchimalco	Xoxoutla, 15	Jojutla de Juárez
Huiçilapã, 1	Huitzilac	Yztla, 11	Puente de Ixtla
Miacatla, 5	[No change]		

Three towns remain to be located: Molotla, Ocpayucã, and Yztepec.

[1] Bernal Díaz (*Historia verdadera de la conquista de la Nueva España* [1904], II: 40) speaks of the "pueblo que se dize Coadlabaca [!] e comundmente corroepemos agora aquel bocable y le llamamos Cuernavaca."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 We know from a list of towns in this province which paid tribute
103 to Texcoco that the following towns, in addition to those given in the *Matricula,* were likewise pre-Hispanic subjects: Atlpoyecan (8), Maçatepec (10), Tlaquiltenanco (13), and Cacatepec (12).

REMARKS ON TOWNS

632 *Atlpoyecan* is clearly Alpuyeca.

Amacoztitla is almost surely the modern Amacuzac. A parallel truncation has occurred in the name Acamilyxtlahuacan (Acamixtla) in adjacent Tlachco Province.

Chimalco, the *Mendocino* version, is corrected to read "Panchimalco," since the glyph clearly shows a banner (*pantli*) and a shield (*chimalli*); the *Matricula* also bears the correct annotation. Moreover, there exists a town of Panchimalco today, and none called Chimalco.

Molotla is said, in a mid-sixteenth-century source,[8] to be a subject of Xiuhtepec.

[712] *Quauhnahuac.* That Quauhnahuac was the big Mexican garrison of the region is evident from Bernal Díaz, who speaks of it as "muy mejor y mayor" than Yauhtepec.[9] After its surrender the caciques asked his pardon for not having given in earlier, because the Mexicans had ordered resistance and augmented their garrison.[10]

NATURE OF THE PROVINCE

101 *Inhabitants and languages.*—Of the inhabitants, to whom the name
197 Tlalhuica is applied, Sahagún writes: "These tlalhuica are those who are settled in the hot country, and they are náhuas, of Mexican speech; in their land much cotton is produced, and aji, and all other foodstuffs."[11]

181 He goes on to say that Tlalhuicatl means "incapable, unable"—a typical bit of native arrogance—and that their defects are that "they go around too much dressed-up, and carrying flowers in their hands"

[8] *Códices indígenas* (1933), Codices 12 and 13.

[9] "Avia dentro en el mucha gente de guerra, ansi de mexicanos como de los naturales" (*Historia verdadera de la conquista de la Nueva España* [1904], II: 40).

[10] "[El] Señor de Mexico les enbio a mandar que pues estavan en fortaleza que desde alli nos diesen guerra e que les enbio vn buen esquadron de mexicanos para que les ayudasen" (*ibid.*, p. 41).

[11] *Historia general de las cosas de Nueva España* (1938), III: 132.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

and are "muy tímidos y toscos o torpes." This seems to have been a general opinion.[32] Quauhnahuac was their principal town, from which they spread south and into what later became Huaxtepec Province.[33]

Provincial borders in 1519.—The province of Quauhnahuac was surrounded by other provinces of the Empire. The intricate provinces of the Valley of Mexico lay to the north. Eastward were Chalco and Huaxtepec, and in the south Tlalcoçauhtitlan. Tepequacuilco, Tlachco, and Malinalco formed the western borders, from south to north.

Quauhnahuac itself was subject to Texcoco specifically. There was a special room in the palace at Texcoco for storing the tribute of this southern province[34] and even a detailed list of what Texcoco received.

Regional names.—The region is called Tlalhuic, by one source, at least.[35]

TRIBUTE

Tribute of the whole province.—The following goods were exacted from the Cuernavaca region:

CLOTHING

1,200 bundles of large "twisted" mantles**
800 bundles of little white mantles**
1,200 bundles of little mantles "richly worked, the sort the lords and caciques wore"**
400 bundles of loincloths**
400 bundles of women's skirts and blouses**
8 warriors' costumes with shields**[36]

[32] Códice Ramírez, fol. 20: "los tlalhuicas que era la gente mas tosca destos seis tribus ... ."

[33] Durán, *Historia de las indias de Nueva España* (1867–1880), I: 12: "llegaron los Tlaluiccas [*sic*] ... los quales como allaron ocupado lo demas, asentaron en lugar que agora poseen, tomando por prencipal asiento y cabeça de su provincia, á Cuauhnauac, de donde salieron los Señores de aquella congregacion á hacer sus moradas y asientos como los demas, unos á Yahutepec, otros á Oaxtepec, á Acapichtlan, á Tlaquiltenanco con todos los demas pueblos, villas y estancias que llamamos Marquesado, pues es el del felicísimo Marqués del Valle."

[34] Ixtlilxochitl, *Obras históricas* (1892), II: 180. A plan of the Texcoco palace and its storerooms figures in the *Códice Quinatzin*.

[35] Códice Ramírez, fol. 20: "llamaron estos a su provincia Tlalhuic porque la poblaron los Tlalhuica."

[36] Among these was the "Huaxtec" (Cuextecatl) dress with its peaked cap so typical of the statuary and divinities of that region. In the *Matrícula* it is clearly marked "cetecpantli cuextecatl tozti," "one yellow Huaxtec costume"—which confirms Seler's identification of the style from literary sources alone. He says, "Ich kein Bild kenne, das durch eine Beischrift als cuextecatl Devise gekennzeichnet wäre" (Seler, *Gesammelte Abhandlungen zur Amerikanischen Sprach- und Alterthumskunde* [1902–1923], II: 603–610).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 FOOD

[262] 4 wooden bins, 1 each of maize, beans, chian, and huauhtli*

OTHER GOODS

[323 2,000 pottery bowls**
289] 8,000 reams of native paper**

651 632 *Tribute of the component towns.*—Coatlan [del Río], not many decades after the Spanish Conquest, gave its new masters goods which were probably similar to its former tribute. This was still paid by the old calendar system on four of the fiestas, or "cada ochenta dias," as it is expressed. They gave the following:

76 pesos of unrefined gold (*tepuzque*)
2 jars of honey
6 women's skirts
6 women's blouses

and made four "sementeras" of maize."

23. Huaxtepec

SOURCES OF THE MAP

635 114 The province of Huaxtepec, with twenty-six towns, is represented on the fifth page of the *Matricula* and on folio 24' and 25' of the *Mendocino*. The glyph in the lower right-hand corner of the *Matricula* page has been worn away, but the corresponding one in the *Mendocino* may be seen as "Huiçilan." Every town is identified in roman letters in both manuscripts, and the two versions agree except in details of spelling. This province formed the eastern part of modern Morelos State, and [128] the present map is based on the "Carta General del Estado de Morelos," of the Comisión Geográfico-Exploradora (1910). Former and present 103 place names are compared below:

Totolapã, 2	Totolapan
Xaloztoc, 20	Xaloxtoc
Xochimilcaçinco, 13	Xochimecatzingo
Yacapichtla, 12	Yecapixtla
Yauhtepec, 11	Yautepec
Yzamatitla, 6	Itzamatitlan

Four towns remain to be located: Atlhuelic, Tehuizco, Tepoztlã, and Çonpanco.

To the foregoing list the names of certain other towns have been added, as follows: Hueyapan (10), Ocopetlayuca (9), and Tetela [del Volcán] (8).

REMARKS ON TOWNS

Ahuehuepan: "Entre las Haciendas del Calderón y el Hospital se ven 632 los restos de San Pedro Ahuehuepan y de Xochimilcacingo a la orilla, 175 respectivamente, de dos barrancas tributarias de los afluentes del Río de Cuautla," according to Miguel Salinas, cited in Sotelo Inclán, *Raíz y Razon de Zapata, Anenecuilco* (1943), p. 59. The latter adds that Ahuehuepan existed half a league from Cuauhtla, and that its lands were taken away and the town was swallowed up by the Hacienda del Hospital at the beginning of the nineteenth century.

Huaxtepec is cited by Cortés in his *Cartas y relaciones* (p. 213) as 632 "Guastepeque, ... donde estaba la Gente de Culúa en Guarnición." 131

Hueyapan was subject to the Mexicans, and formerly to the Xochimilca.[30] Since it was linked to Cuauhtla Amilpas during the colonial period, it has been placed in the same province as that town.

Tehuizco is listed in a sixteenth-century source as being a league from Totolapa,[31] but cannot be found today.

[30] *PNE*, 6: 285: "eran antiguamente subjetas y tributarias a la corona Real de Mexico, pero la principal subjeçion que deste pueblo de Tetella y Veyapan tenian era a Suchimilco."

[31] *PNE*, 6: 7, where Nepopualco [Nepozualco] is located as half a league from Totolapan.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 *Tetela* [*del Volcán*] has been placed in this province because of its linkage with Hueyapan (*q.v.*).

Tepoztlan is probably not the "Ciudad" northeast of Cuernavaca, which seems to figure in the province of Chalco. It may be a pueblo subject to Ahuacuozingo, Morelos.

Xochimilcaçinco (see Ahuehuepan, above).

Yacapichtla is a name already corrupt in native days. "Xihuitz acapitzalan" was the original form.[a]

Çonpanco may possibly be Zompahuacan, southeast of Tecpaçinco.

NATURE OF THE PROVINCE

101 *Inhabitants and languages.*—The northern quarter of this province
197 of Huaxtepec was part of the former domain of the Xochimilca, a tribe which peopled the regions south and west of the volcano. Towns definitely stated to have belonged to the Xochimilca of this region are Totolapan, Tlayacapan,[b] and Yacapichtla.[c] It will be noted also that a town called "Xochimilcaçinco" lies in the north-central part of this province.

West and south of the Xochimilca were the towns of another Náhua tribe—the Tlalhuica, who inhabited the territory from Huaxtepec to Quauhnahuac.[d]

The Xochimilca were Náhuatl speakers,[e] and so were the Tlalhuica.[f]

635 *Provincial borders in 1519.*—To the west of Huaxtepec lay the fellow
131 province of Quauhnahuac. North of it was the Mexicanized province of Chalco, once an independent state. To the east were Tlaxcala and the Empire province of Tepeyacac, extending from south of Popocatepetl to south of the other great mountain, Citlaltepetl or Orizaba. In the southeast, a miserably documented region, the province of Quiauhteopan must have formed the border.

[a] RHE, 1: 221: "es notorio esta villa de acapiztla se llama asi porque antiguamente se llamaba xihuitza capitzala porque los senores que la gobernaban trayan unos chalchiuites atravesados en las nariçes y que eso queria decir y como agora está la lengua corruta se dize y le llaman ayacapiztla." The *Matricula* and *Mendocino* inscriptions indicate that the corruption is ancient.

[b] Durán, *Historia de las indias de Nueva España* (1867–1880), I: 10.

[c] RHE, 1: 225: "los que poblaron á esta villa heran como está dicho de xuchimilico."

[d] See pp. 76–77.

[e] RHE, 1: 225: The people of Yacapichtla spoke "la lengua ... de Suchimilco que aunque es mexicano difieren en algunos bocablos en ser mas cortesano e mas cortes."

[f] See pp. 76–77.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Only in the northeast was there any contact with enemy terrain. 635
There Tetela and Hueyapan are described as frontier towns,[*] while 131
memory of conflict with the dwellers of the plateau also persisted in Totolapan and adjacent towns well within the province.[*]

Regional names.—The zone of the towns specified as Xochimilca, together with near-by Atlatlauca, was called Quauhtengo.[*] South of Yacapichtla lay another district referred to as the Tlalnahuac, in which Tlayacac and Tecpaçinco were prominent centers.[*]

TRIBUTE

Tribute of the whole province.—In the *Matricula* we see, and in the 651
Mendocino we read of, the following opulent tribute which flowed to the Triple Alliance from the province of Huaxtepec:

CLOTHING [291]

400 bundles of loincloths**
400 bundles of women's clothing**
1,400 bundles of large mantles of "twisted" cloth**
8,000 bundles of rich little mantles**
46 warriors' costumes with shields (6 being fine pieces)* [714]

FOOD*

4 large wooden cribs (1 each of maize, beans, chian, and huauhtli) [262]

OTHER GOODS**

2,000 polished pottery dishes of various colors [323]
8,000 reams of native paper [289]

Tribute of the component towns.—Rather curiously, no details are 632
available on the origins of the foregoing tribute, military aid and 651
prisoners alone being mentioned. [727]

[*] *PNE*, 6: 286.

[*] Atlatlauca, Totolapan, and Tlayacapan "trayan guerras" with "Chalco, Guexoçingo, Tazcala, Cholula; las quales heran sobre sus tierras" (*PNE*, 6: 9). We read in Lehmann, *Die Geschichte der Königreiche von Colhuacan und Mexico* (1938), §§ 1202–1203, how the people of Totolapan accompanied Nezahualpilli in a successful campaign against Huexotzinco in 11. Tochtli, 1490.

[*] "Estan las dichas tres cabeçeras asentadas en tierra llana, çercadas de montes y sierras no muy altos: llamase la Probincia Quahutengo, y dixose asi porque los mas de sus subjetos estan poblados en montes, y en la dicha lengua se dize el monte quahutla o quahutengo" (*PNE*, 6: 10).

[*] RHE, 1: 224: "Los pueblos de la tlalnahuac son catorze cabeçeras caen casi todas desta villa [Yacapichtla] á la parte del sur dizen llamarse asi porque es tierra llana y mas caliente questa la una cabeçera dizen que antiguamante no abia mas de dos cabeçeras que heran tequepaçinco y tlayalaque y que los demas heran estançias y asi agora se nombran catorze cabeçeras."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 632 Atlatlauca, Totolapan, and Tlayacapan gave no tribute because they were near the frontier, as mentioned above.[30]

[727] Yacapichtla seems to have made a tribute of prisoners.[31]

24. Tlalcoçauhtitlan

SOURCES OF THE MAP

635 114 Page 18 of the *Matricula* depicts three provinces, their town glyphs and tribute being ranged in vertical sections. The left-hand section, in which the cabecera is identified in roman letters, sets forth the province of Tlalcoçauhtitlan. This part of the page is copied in the *Codex Mendocino* as the top section of folio 40'. The province lay in central-eastern Guerrero and consisted of eight towns, four of which have [128] been identified—chiefly on the "Millionth Map" of the American Geographical Society (sheet "Ciudad de México"). Former and present name forms are listed below:

103

MENDOCINO	MILLIONTH MAP
Ahuaçiçinco, 4	Ahuacuotzingo
Mitzinco, 3	Mitlalcingo
Tlalcoçauhtitlã, 2	Tlalcozotitlán
Tolimani, 1	Tulimán

Four other towns remain to be located: Quauhtecomaccinco, Tepuztitlã, Ychcatlan, and Çacatla.

REMARKS ON TOWNS

632 131 *Quauhtecomaccinco*, according to one lone reference, was four leagues from Olinalá.[32]

Tepuztitlan may be a Tepuztlan San Miguel, subject to Chiautla, from which it lay eight leagues distant.[33]

Ychcatlan was four leagues from Tlalcoçauhtitlan "de muy mal camino de sierras"[34] and eighteen leagues from Tlapan, being an estancia of Tenango.[35]

[30] "El señor natural ... fue Montezuma, al qual no tributaban, porque solo le servian en las guerras" (*PNE*, 6: 8).

[31] The "Relación de Yecapichtla," after stating (RHE, 1: 225) that "aunque motençuma los quiso señorear no pudo vençellos y asi estuvieron siempre de por si y sobre si," admits (p. 227) that "los que de aquellos prendian los llevaban a presentar a motençuma."

[32] *PNE*, 5: 210.

[33] *GPM*, p. 112.

[34] *PNE*, 5: 250.

[35] *GPM*, p. 104.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

Inhabitants and languages.—According to the Mendizabal-Jiménez Moreno linguistic map, Tlalcoçauhtitlan embraced a diversity of languages. Apart from the predominant Náhuatl, areas of Tlapanec, Matlame, and the unclassified Tuxteca are noted. The province of Tlalcoçauhtitlan was brought into the Empire by Nezahualcoyotl, who placed a governor over it.*

Provincial borders in 1519.—West of Tlalcoçauhtitlan lay the province of Tepequacuilco; east of it Quiauhteopan, and to the north Quauhnahuac and Huaxtepec. These were Empire provinces. On the south, however, it gave on obscure and bellicose Yopitzinco.

TRIBUTE

Tribute of the whole province.—The yellow earth which gave its name to the province of Tlalcoçauhtitlan naturally figured in its tribute, which was as follows:

CLOTHING

100 bundles of large mantles**
1 warrior's costume with shield*

FOOD

100 pots of bee honey**

OTHER GOODS

20 dishes of *tecoçahuitl*, "ques un barnyz amarillo con que se enbixavan"***

* Ixtlilxochitl, *Obras históricas* (1892), II: 198: Nezahualcoyotl "... fué sobre la [provincia] de Tlauhcocauhtitlan y la ganó, en donde puso por su mayordomo á Huitzilzecuh, en donde se le daban de tributo y reconocimiento en cada un año diez y seis bueyes de color y veinte cargas de copal, doscientas sesenta y ocho jícaras y tecomates finos, y veinte cargas de varas de tlacuilol quahuitle." The last item is clarified by Sahagún (*Historia general de las cosas de Nueva España* [1938], III: 222): "Hay unos árboles silvestres que se llaman tacuiloquauitl, que quiere decir que tiene madera pintada, porque ellos son bermejos, y tienen las vetas negras que parecen pinturas sobre el bermejo; es árbol muy preciado, porque de él se hacen teponaztles, tamboriles y vihuelas, y suenan mucho estos instrumentos cuando son de esta madera; y por ser muy pintada y de buen parecer es muy preciada."

** Tezozomoc (*Crónica mexicana* [1878], p. 315) includes among the tribute from the Huaxteca "betun amarillo que llaman Tecuezalin y tecozahuitl con que untan y tiñen jícaras, y ablandan masco y pi[illegible]

Editorial note (C. O. Sauer): This Náhua word may possibly also signify the yellowish lacquer base, prepared from Coccus insects. The intermediate slopes between the volcanic highlands and the Balsas lowland were and are the chief source of this substance, prized in the aboriginal crafts of central and southern Mexico.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 This differs entirely from the tribute imposed by the Alcolhuaque on first conquering the province, which tribute consisted of:

[323 [313] 314]

16 pieces of colored lacquer
268 fine *jícaras* and *tecomates*
20 loads of fine cabinetmaker's wood
20 loads of copal[28]

25. Quiauhteopan

SOURCES OF THE MAP

635 114 On the *Matrícula* page depicting three provinces (p. 18), the section extending vertically down the middle represents the province of Quiauhteopan. This section is copied in the *Codex Mendocino,* folio 40', as the middle stripe, but is placed horizontally there. Quiauhteopan Province lay in eastern Guerrero, and may have extended north into Puebla. Of its six towns, three have been identified, the "Millionth [128] Map" of the American Geographical Society, sheet "Ciudad de México," having been used as point of departure. Correspondence of old and modern names is noted below:

103

MENDOCINO	MILLIONTH MAP
Olinalan, 1	Olinalá
Qualac, 2	Cualac
Quiauhteopan (? 3)	[See Remarks on Towns]

Three other towns remain to be identified: Quauhtecomatla, Xala, and Ychcatla.

REMARKS ON TOWNS

632 *Quauhtecomatla* may be the "Tecomatlan" cited in one old document emanating from this region.[29] This Tecomatlan appears much later as "Joya de Tecomatlan" and is identified as a rancho seven leagues "Les Nordeste" of Chilapa, to which it was subject.[30]

[151] *Quiauhteopan* was subject to Olinalan (Olinalá), from which it lay three leagues distant, in a direction not given.[31] It has been placed in the otherwise blank region north of Olinalá. Quiauhteopan figures in the conquest lists along with Tlalcoçauhtitlan and Ohuapa.

[28] The list is quoted in n. 36 above.
[29] *PNE*, 5: 251.
[30] AGN, Padrones, 16: 108'. Petatlan is given by the same source as seven leagues east of Chilapa.
[31] *PNE*, 5: 216.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

Inhabitants and languages.—The Mendizabal-Jiménez Moreno linguistic map indicates great linguistic complexity for this province: Náhuatl, Mixtec, Tlapenec, and Matlame. 101 197

Olinalan, celebrated for its lacquer-work, probably carried on that activity in pre-Hispanic times. From adjacent Tlalcoçauhtitlan Province, perhaps only a few kilometers away, "bateas" went as tribute to Texcoco.[a] [551]

Provincial borders in 1519.—Because half the towns of the province cannot be identified on the maps of unexplored Guerrero, the north of this province is a great blank. It bordered, probably, on Huaxtepec Province in that direction, as on the west with Tlalcoçauhtitlan, on the east with Yoaltepec, and on the south with Tlapan, all of them fellow tributaries. 635 131

Regional names.—Somewhere in the dubious northeast began the region known as Totollan.[a]

TRIBUTE

Tribute of the whole province.—Quiauhteopan was a rich mining region, as is shown by the following list of its tribute to the highlands: 651

CLOTHING

400 large mantles** [291]
1 warrior's costume with shield* [714]

FOOD

100 jars of bee honey* [263]

OTHER GOODS

40 large copper bells** [326]
80 copper axeheads** [317]
1 dish of little turquoises*

Tribute of the component towns.—Olinalan, in the mid-sixteenth century, rendered a sizable quarterly tribute of base gold, cacao, money resulting from the sale of cacao, and sixty little jars of honey (over 632 651

[a] See the section on Tlalcoçauhtitlan, above.

[a] *PNE*, 5: 57: "Fiaxtla ... está en la provincia de los Totoltecas de lengua mexicana diferente de los de la Mixteca sujetos á la dotrina de la cabecera de Acatlan." Of the same town, it is said farther on (5: 77): "En este pueblo se habla la lengua mexicana corrupta, porque es de la provincia de Totola."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 651 half the honey formerly paid by the province, according to the *Matrícula*). Besides this, two special milpas were cultivated and their [314] yield was sent to the near-by mines of Ayoteco.[a]

[a] *PNE*, 1: No. 437: "Dan de tributo cada ochenta dias quinientos y veinte y ocho pesos y dos tomines de tipuzque, y catorce xiquipiles de cacao y seis mill y dozientos y ochenta cacaos, y esto dan al dicho su amo en dineros que son quatroçientos y çinquenta pesos, y ocho xiquipiles de cacao y sesenta xarrillos de miel, y cada año le hazen dos sementeras de maiz y se lo ponen en las minas de Ayoteco." On *tipuzque*, see Bancroft, *History of Mexico* (1883), II: 7, and Boban, *Documents pour servir à l'histoire du Mexique* (1890), II: 416 and 430.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

VI. THE OLD ACOLHUA DOMAIN: THE SOUTHEAST

THE ACOLHUAQUE conquered the lands along the southern Gulf 175
coast as well as those of the northern. Documentation is sparse but sufficient. Ixtlilxochitl names Tlatlauhquitepec and Quauhtocheo, Cuetlaxtlan, and Tochtepec all as conquests made by Texcoco, and each of these towns heads a page of lesser tributaries in the *Matricula*. The "Relación de Cempoalla" supports Ixtlilxochitl and also tells by what means the Mexica later acquired the Texcocan dominions.

Xoconochco, the far-flung southern province, has been added to 128
chapter vi simply because it fits no better elsewhere. It is the only province in this group of five which cannot certainly be called old Acolhua terrain.

26. TLATLAUHQUITEPEC

SOURCES OF THE MAP

The province of Tlatlauhquitepec lay in north-central Veracruz, ex- 635
tending somewhat into northern Puebla. The *Matricula* leaf on the 114
recto side of which it is painted belongs between pages 26 and 27 of the manuscript as it exists today, but long ago it was torn out and taken to Philadelphia.[1] This detached page "26A" is copied in its proper place in the *Mendocino*, as folio 51r. Of the eleven principal [128]
towns of the province, nine have been located, largely on the "Millionth Map" of the American Geographical Society, sheet "Ciudad de México." Old and modern names follow: 103

MENDOCINO	MILLIONTH MAP
Atenco, 8	[See Remarks on Towns]
Ayutuchco, 5	Ayotoxco
Teotlalpan, 1	Huexutlalpan
Teçiutlan, 9	Teziutlán
Tlatlauhquitepec, 7	[No change]
Xonoctla, 3	Jonotla
Yaunahuac, 6	[See Remarks on Towns]
Yayauquitlalpa, 4	Yancuitlalpan
Yztepec, 2	[See Remarks on Towns]

Two towns remain to be found: Caltepec and Yxcoyamec.

[1] See Introduction, p. 7.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

103 An unpublished relación adds Xoxopanco (a) and Tzotzocolco (b). The following towns have been added on the basis of other information: Acatlan (10), Tlaculula (11), and Xilotepec (12).

REMARKS ON TOWNS

[632] *Acatlan* was a Mexican garrison town.[1]

[712] *Atenco* is probably "Atempan," which was a "cabecera por si en la corona" in the sixteenth century[2] and which may be found today on the Puebla map of the Secretaría de Agricultura y Fomento atlas.

Teotlalpan may be identified with modern Hueytlalpan, the *teo*>*huey* change having been noted elsewhere.[4]

Tlaculula (also called Hueycalli) "fue subjeto y tributaua a Montecuma."[5] It seems to have been a major pre-Mexican center.[6]

[131] *Tzotzocolco* lay north of "Güeytlalpan," near Xocopanco.

Xilotepec is cited as a tributary in the note to Tlaculula, above.

[131] *Xoxopanco* lay five leagues north of "Gueytlalpan" and east of Zacatlan, according to an unpublished relación.

Yaunahuac appears on the Puebla map of 1908.

Yayauquitlalpa was an estancia of Tlatlauhquitepec.[7]

Ytztepec appears as "Ixtepec" on the 1908 map of the Comisión Geográfico-Exploradora.

Yxcoyamec is mentioned as "Yxcuyomec," an estancia of Tlatlauhquitepec, in the mid-sixteenth century.[8]

NATURE OF THE PROVINCE

175 197 *Inhabitants and languages.*—Tlatlauhquitepec was a conquest of the Acolhuaque of Texcoco;[9] its speech was chiefly Totonac and Náhuatl.

---

[1] *PNE*, 5: 113.

[2] *GPM*, p. 9: *ENE*, 14: 79.

[4] Cf. p. 23 above. In the present case, the *visita* of Diego Ramírez gives us a link, if any be really needed. In July, 1552, he is visiting Tlatlacotepeque [*sic*] and Gueytlalpa, "belonging to His Majesty" (*ENE*, 6: 174). A month later he sets the tribute of Teutlalpa to His Majesty and goes on to Tlatlacotepec (*ENE*, 8: 153). Further references to the town may be found in *Procesos contra indios idólatras*, Publ. AGN (1912), 3: 205–215.

[5] *PNE*, 5: 108.

[6] *PNE*, 5: 106: Xilotepec " ... rreconoçian con sus tributos al pueblo de Tlaculula y despues a Monteçuma: tributaban maiz, gallinas, liquidambar." *PNE*, 5: 110: Quaquauzintlan "eran de Tlaculula y despues fueron de Montezuma."

[7] *PNE*, 1: No. 522.

[8] *PNE*, 1: No. 522.

[9] Ixtlilxochitl, *Obras históricas* (1892), I: 320.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Provincial borders in 1519.—This was the northernmost of the three provinces lying east of Tlaxcala and separating it from the sea. North of it was Tuchpa; northwest, Tlapacoyan; and to the south, Quauhtochco.

Regional names.—The northern part of the province was part of the Totonacapan.

TRIBUTE

Tribute of the whole province.—The tribute of Tlatlauhquitepec held little variety:

CLOTHING

1,608 bundles[30] of black-and-white striped mantles[**]
2 warriors' costumes and shields[*]

OTHER GOODS

800 cakes of liquidambar[**][31]

Tribute of the component towns.—Xilotepec gave maize, chickens,[1/A] and liquidambar.[32]

Teotlalpan (Hueytlalpan) gave cotton mantles.[33]

Xoxopanco and Tzotzocolco "... antiguamente tributaban a montecuma mantas de algodón," according to the unpublished relación mentioned above.

27. QUAUHTOCHCO

SOURCES OF THE MAP

Quauhtochco was one of the provinces cutting Tlaxcala off from the sea. Glyphs of its seven principal towns are painted on page 24 of the *Matricula* and on folio 48' of the *Mendocino*. By means of the 1908 map of Veracruz,[34] in the center of which area this province lay, five of these towns may be identified, as follows:

MENDOCINO	1908 MAP	MENDOCINO	1908 MAP
Ahuilizapan, 5	Orizaba	Tuchçonco, 3	Tozongo
Quauhtochco, 2	Huatusco	Ytzteyocan, 4	S. Nicolas
Tototlan, 1	Totutla		

Two others remain to be located: Quauhtetelco and Teuhçoltzapotlã.

[30] Corrected from 1,600.
[31] Cf. Krickeberg, *Las estatuas* (1933), pp. 111–112, for an examination of tribute from this province.
[32] Cf. n. 6 above.
[33] RHE, 1: 462: "eran basallos de montecuma tributabanle mantas de algodon."
[34] Comisión Geográfico-Exploradora.

1/A [Chickens are not known to date from pre-Spanish times in the New World. In this case, the word may be a generic term for fowl. — Analyst]

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

REMARKS ON TOWNS

632 [712] *Quauhtochco* figures among the garrison towns on folio 17ᵛ of the *Mendocino* (see p. 128, n. 1), though no governor is mentioned.

[175] *Tuchçonco*, though shown in the *Matrícula* as a pre-Hispanic town, seems to have been resettled in the sixteenth century. There are various documents concerning this resettlement, now kept in the Archivo General de la Nación, in Mexico City.[28]

Teuhçoltzapotlan was a doubtful name even to the *Mendocino* commentator.[29]

Ytzteyocan, like Tuchçonco, was subject to Cuescomatepec from the sixteenth century on.[30] It was later called San Nicolas Tolentino, then San Nicolas del Gentil, and, finally, Juventino Rosas.[31]

Ytzteyocan figures on folio 17ᵛ of the *Mendocino*, among the garrison towns (see p. 128, n. 1), although no mention is made of a governor or governors.

NATURE OF THE PROVINCE

635 197 *Inhabitants and languages.*—The troops of Texcoco brought Quauhtochco itself into the Empire.[32] After various uprisings in the fifteenth century, it was finally so well assimilated that it remained faithful to Moctezuma in the Spanish Conquest.[33] Náhuatl was the native tongue; what preceded it is doubtful.

635 131 *Provincial borders in 1519.*—To the west of Quauhtochco was Tlaxcala; to the east the sea, from which Quauhtochco barred that dwindling state. Two Empire provinces lay to the north and south: Tlatlauhquitepec and Cuetlaxtlan.

TRIBUTE

651 *Tribute of the whole province.*—The tribute of Quauhtochco consisted of a narrow range of items:

CLOTHING

[291] 400 large mantles[34]

[28] E.g., AGN, Mercedes, 1: 36 and 40: 170ᵛ, speaks of "tuçongo, subjeto al [pueblo] de san juᵒ cuescomatepeque de la jurisdizion de gustusco." Dominguez (*Coxcomatepec de Bravo: I* [1943], p. 42) publishes the earlier document.

[29] He first wrote "çolan" and then rubbed it out.

[30] AGN, Mercedes, 1: 36, calls it "ysteyuca," and the same ramo, 18: 305ᵛ, "ystoyuca."

[31] Dominguez, *Coxcomatepec de Bravo: I* (1943), pp. 17 and 56.

[32] Ixtlilxochitl, *Obras históricas* (1892), I: 320 and II: 196.

[33] Cortés, *Cartas y relaciones* (1866), pp. 260–261.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651

FOOD

20 loads of cacao* [262]

OTHER GOODS

1,600 bales of cotton* [248]

Tribute of the component towns.—Ytzteyocan and Quauhtochco, 632
fifteen years after the Conquest, were paying their Spanish masters 651
what they doubtless had paid in pre-Hispanic times: cacao and cotton.*

28. CUETLAXTLAN

SOURCES OF THE MAP

Cuetlaxtlan appears on page 25 of the *Matricula* and on folio 49' of the 635
Codex Mendocino. It was the southernmost of the provinces which 114
kept Tlaxcala from salt and the sea. It was in Cuetlaxtlan Province, which lay in south-central Veracruz, that Cortés landed. Of the pre-Hispanic centers, three have been located, mostly by the help of documents. The "Millionth Map" of the American Geographical Society, [128]
sheet "Ciudad de México," has been used as a framework for the present map, with the results given below: 103

MENDOCINO	MILLIONTH MAP
Cuetlaxtlan, 2	Cotaxtla
Mictlanquauhtla, 3	[See Remarks on Towns]
Teoçiocan (?), 1	[See Remarks on Towns]

Three more towns remain to be located: Acozpā, Oxichan, and Tlapanicytlā.

REMARKS ON TOWNS

Cuetlaxtlan was a Mexican presidio in the final native period.* 632
Mictlanquauhtla lay half a league from the mouth of the Río Medellín, according to an unpublished land grant.* [131]

* According to a document published by Dominguez, *Coxomatepec de Bravo: I* (1943), p. 31.

* RHE, 1: 158: "para seguridad de los forçados é quietud desta tierra se dize que tenian los señores mexicanos dos presidios e fortaleças con guarniçion e gente de guerra que heran cotastla ... y el otro hera otopa questá ocho leguas desta ciudad á la banda de noroeste." This Otopa is said to have been almost deserted by the time of the sixteenth-century writer.

* Dated April 12, 1575, and preserved in the AGN, Mercedes, 10: 61: "don myn ctarriquez &c por la presente en nombre de su mag^d hago m^ced a joan sarmyento vezino de la ciudad de los angeles de un sitio de estancia para ganado menor en termynos del p^o de myctlanquauxtla media legua poco mas o menos de la voca del rrio de medellin dentro de los medanos en vn cerro."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 *Teoçiocan* is called "Teocinyocan" by another native source.[26] It is perhaps an estancia of Zongolica (a), "en tierra fria," called San Juan de Teoyxuacan, two leagues from the cabecera.[27]

NATURE OF THE PROVINCE

175 *Inhabitants and languages.*—Cuetlaxtlan, we are told by a Texcocan
197 chronicler, was conquered by that power,[28] a statement confirmed by the "Relación de Cempoalla." The pre-Hispanic language was Náhuatl.

635 *Provincial borders in 1519.*—Cuetlaxtlan lay between Quauhtochco
131 and Tochtepec, which were on the northwest and on the southeast respectively. Northeastward was the sea, and to the southwest was a doubtful region embracing at least one free city-state of the Mazateca.

TRIBUTE

651 *Tribute of the whole province.*—The tribute of Cuetlaxtlan, in contrast with that of adjacent Quauhtochco, was variegated:

CLOTHING

[291] 400 women's blouses and skirts**
400 small mantles, borders black and white**
400 half-quilted mantles**
400 mantles of 4 brazas each**
400 large white mantles, 4 brazas each**
160 very rich mantles for lords and caciques**
1,200 black-and-white striped mantles**
[714] 2 warriors' costumes with shields*
[317] 1 string of chalchiuites*
400 bunches of quetzal feathers*
[237] 2 lip plugs of crystal, with blue and gold mountings*
[301] 20 lip plugs, light amber, mounted in gold*
1 hair adornment of quetzal feathers*

FOOD

[262] 200 loads of cacao*

Cuetlaxtlan paid cacao and cotton mantles, both white and decorated.[29]

[26] Sahagún, *Historia general de las cosas de Nueva España* (1938), IV: 134.
[27] *PNE*, 5: 230.
[28] Ixtlilxochitl, *Obras históricas* (1892), I: 320 and II: 196.
[29] RHE, 1: 131.
[30] *PNE*, 5: 9: "tributavanle cacao y mantas de algodón blancas e pintadas."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

29. Tochtepec

SOURCES OF THE MAP

Tochtepec, the rich and sprawling province which lay in north-eastern Oaxaca, southern Veracruz, and Tabasco, was depicted on another of the leaves which are missing from the *Matriculc*. We know that it should appear on the verso side of a leaf between pages 22 and 23 of the present manuscript, because of the arrangement of the *Mendocino* copy, folio 46'. This lost page "22B" contained twenty-two principal towns, a dozen of which have been located on the base of the American Geographical Society's "Millionth Map," sheet "Ciudad de México." Old and modern names are compared below:

MENDOCINO	MILLIONTH MAP
Coçamaloapã, 12	Cosamaloapan
Chinantlan, 10	[See Remarks on Towns]
Mixtlan, 13	
Otlatitlan, 4	Otlatlán
Oxitlan, 2	Ojitlán
Puctlan (? 5)	[See Remarks on Towns]
Teotlilan, 1	Teutila
Tlacotlalpã, 6	Tlacotalpan
Tochtepec, 3	Tuxtepec
Tototepec, 9	[See Remarks on Towns]
Toztlan, 7	
Yxmatlatlan, 11	[See Remarks on Towns]

Various towns have not been located. Some of the following, when found, may provide the obscure route to the southern province of Xochonochco:

Ayotzintepec	Teteutlan
Ayoçintepec	Tzinacanoztoc
Cuezcomatitlã	Xayaco
Michapan, 14 (?)	Xicaltepec
Michtlan	Yaotlan

We may add the following town to the province: Ucila (8).

REMARKS ON TOWNS

Chinantlan has been identified with Valle Nacional. The matter is discussed by Bevan. There is a curious division of evidence regarding the relationship of Chinantlan to the Empire. It appears in the *Ma-*

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

It appears in the Ma-
632 *tricula*, which is the criterion of the present work, and the sixteenth-
648 century relación says clearly enough that "este señor rreconoçia a
[175] Moteçuma,"[20] but Cortés himself, in his letters, explains that it was not subject to the Empire, and copies a message from his captains there who held out during the Spanish flight from the capital. These write that they were daily at war, during this period, with the Tochtepec garrison.[21] A less reliable document also claims independence for the Chinantec.[22] Presumably they were in reality subject, but precariously so, to Moctezuma.

632 *Puctlan.* There were two pre-Conquest Puctlans in this province.
131 One, in the highlands of Oaxaca (no. 5), still exists as Putla, southwest of Tlaxiaco. The other (a) lay among the lagoons of the Río Alvarado, three leagues from Yxmatlahuacan,[23] three from Acula, and four from an unlocated Tlatlayan.[24]

632 *Tochtepec* was a Mexican garrison town, as the letters of Cortés
712 show.[25] The "Relación de Chinantla" tells how judicial matters were forwarded to Moctezuma's garrison there.[26]

632 *Tototepec* may be the "Tepetotutla" on Bevan's map.
131 *Yxmatlatlan* appears as Yxmatlahuacan, three leagues from Puctla (*q.v.*).

NATURE OF THE PROVINCE

635 *Inhabitants and languages.*—Tochtepec was reduced by the armies of
197 Texcoco, as they pushed down the coast.[27] The chief language of the

[20] *PNE*, 4: 60.

[21] Cortés, *Cartas y relaciones* (1866), p. 204: " ... a la primera vez que ... vine, proveí, como en la otra relacion hice saber a V.M. que en dos o tres otras provincias ... se hiciesen para V.M. ciertas casas de granjerias ... e á una dellas que se dice Chinanta, envié para ello dos españoles; y esta provincia no es sujeta á los naturales de Culua." The message he wrote goes on to say, "con los de Tuxtepec ... cada dia tenemos ... guerra."

[22] In García Icazbalceta, ed., *Colección de documentos para la historia de México* (1858–1866), II: 592: "Chinanta es provincia por sí, pequeña, en sierras; no obedecia á México, y en esta hay pueblos cada uno sobre sí, de diferentes lenguas: á veces son amigos unos de otros, á veces no."

[23] See Yxmatlatlan, below.

[24] *PNE*, 5: 236: "Tiene este partido otro pueblo que se dize Puctla questa metida en las lagunas del rrio de Albarado, tres leguas a la parte del poniente." It is also mentioned in *ENE*, 14: 87, and in n. 40 below.

[25] *Op. cit.*, p. 204.

[26] "E las cosas supremas, como hazer justiçia de algun principal e quitar la vida alguno, lo comunicavan con los yndios mexicanos que residian en el pueblo de Tuchtepeque, donde Moteçuma tenia una guarnicion de gente muy grande donde rrecojian los tributos de todos los pueblos desta tierra" (*PNE*, 4: 62).

[27] Ixtlilxochitl, *Obras históricas* (1892), II: 197–198: "Conquistadas estas provincias que pertenecían al patrimonio del rey de Tetzcoco, pasó de allí con su ejército costeando

[i.e., Chinantlan — Analyd]

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

province was Náhuatl, but along the southwest both Chinantec and Mazatec were spoken.

Provincial borders in 1519.—To the northwest of Tochtepec Province lay Cuetlaxtlan and its fortress; to the southwest was the doubtful zone of the independent Mazatec. Southward, Coayxtlahuacan and Coyolapan provided another strong link with the Empire, but somewhere along the southeast the province of Tochtepec gave on enemy regions, through which a thin line of fortresses must have led to Xoconochco.

TRIBUTE

Tribute of the whole province.—The wealth of Tochtepec was phenomenal. Of the several lists of tribute which we have, the *Matrícula* shows the following items:

CLOTHING

1,600 rich mantles, of the kind the lords and caciques wore**
800 red-and-white striped mantles**
400 women's blouses and skirts**
1 warrior's costume and shield, with a birdlike standard*
1 gold shield*
1 feather standard like a bird's wing—yellow feathers*
1 gold diadem*
1 gold headband, a hand's width and thick as vellum*
2 strings of gold beads*
3 large chalchiuites*
4 strings of chalchiuites*
20 lip plugs of light amber mounted in gold*
20 lip plugs of crystal with blue smalt and gold setting*

FOOD

20 loads of cacao

la mar del Norte hasta otra provincia que se dice Teochtepec (*sic*) que asimismo la ganó y sujezgó, y puso en ella por su mayordomo y cobrador de tributos (de más de la gente de guarnición que en cada una de ellas dejaba) á Toyectzin, que cobraba en cada un año cuarenta fardos de mantas ricas y viente de unas camisetas asimismo ricamente tejidas de finos colores, que montan ciento y viente piezas: igualmente le sembraban y cultivaban en cada un año una sementera de cacao, que tenía de longitud cuatrocientas medidas y de latitud doscientas, sin más treinta y tres cargas de cacao que se cobraban de tributo, dos mil pelotas de hule y cuatrocientos paños de grana, sin más muchas piezas de plumería, como eran rodelas, penachos y otras divisas que los reyes usaban cuando salían a las guerras, hechas de la plumería rica que llaman quetzali. Esta provincia contenía doce pueblos, asimismo sujetos, y daban de tributo cierta cantidad de esmes y criadas para el servicio de palacio."

* Contributed by Ucila. See Tribute of the Component Towns, below.
** Also from Ucila.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

OTHER GOODS

651 16,000 rubber balls
[314 100 pots of liquidambar
237] 24,000 little bunches of blue, red, and green feathers
4 tufts of green feathers trimmed with yellow ones
80 handfuls of quetzal feathers

[114] Ixtlilxochitl gives another list for the whole province: what it paid to Acolhuacan when it was first subjugated:[39]

CLOTHING

[291] 40 bundles of rich mantles
20 bundles of rich blouses
. . . shields, panaches, etc., of quetzal plumes

FOOD

[262] 33 loads of cacao

OTHER GOODS

[314 2,000 rubber balls
237] 400 measures of cochineal

[357] Personal services were also exacted, he relates.

651 The same chronicler says that twelve pueblos were subject in this
114 province. In a little list inserted without explanation in the annals of Quauhtitlan, Tochtepec and eleven other towns of the province are named, along with these items:

[314] 20 + 10 + 1 (31) loads of cacao
400 [measures] of *achiote*
5 *centzontli* [2,000?] rubber balls[40]

The agreement between the Ixtlilxochitl and Quauhtitlan lists suggests that Ixtlilxochitl had the latter at his disposal.

632 *Tribute of the component towns.*—Even more detailed information
651 may be secured on the tribute of Tochtepec Province.

Chinantlan and its subjects paid gold and cacao.[41]

Tlacotlalpan paid cotton mantles (some bearing painted pictures of

[39] Quoted in n. 36 above.

[40] Lehmann, *Die Geschichte der Königreiche von Colhuacan und Mexico* (1938), p. 311. The twelve towns are Quechollan, Tlacoapan, Chiltepec, Poctlan, Oxitlan, Ichcatlan, Tlequauhtla, Coyatepec, Tzinacanoztoc, Xallapan, Otlatitlan, and Tuchtepec.

[41] *PNE*, 4: 60: "este señor ... reconoçia a Moteçuma, y el y todos sus pueblos le tributaban oro e cacao."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

the sun and the moon), cacao and parrots, ocelot skins, alligator teeth (probably for use as charms), and chalchiuites.[46] 632 651 [28]

Toztlan also gave mantles painted with suns, as well as other garments. Dimensions are specified.[47]

Ucila paid directly to the capital each year a gold shield, an ornament made of quetzal feathers, and two collars of gold beads, for Moctezuma and his wife. These are also depicted on the *Matricula* page. To the governor in Tochtepec they gave gold, cacao, cotton, maize, chile, beans, mantles, grass mats, and all sorts of fruit. A third tribute each year went to their own cacique.[48]

30. Xoconochco

SOURCES OF THE MAP

In the State of Chiapas, at the approaches of Guatemala, lay the coastal province of Xoconochco. The signs depicting this province are painted on the twenty-third page of the *Matricula*, and the copy appears on folio 47' of the *Codex Mendocino*. Of the eight principal towns of this province, seven have been identified, principally on the American Geographical Society's "Millionth Map," sheet "Ciudad Guatemala." Old and modern names are compared below: 635 114 [128] 103

MENDOCINO	MILLIONTH MAP	MENDOCINO	MILLIONTH MAP
Acapetlatlan, 2	Acapetagua	Mapachtepec, 1	Mapastepec
Ayotlan, 7	Ayutla	Maçatlan, 5	Mazatán
Huehuetlan, 4	Huehuetán	Xoconochco, 6	[See Remarks on Towns]
Huiztlan, 3	Huixtla		

One town remains to be located: Coyoacan.

[46] "Motezuma lo señoreava: tributavanle ropa de algodon con el sol e la luna y otras pinturas pintadas en ella, y cacao y papagayos y cueros de tigre y dientes de lagartos y piedras que llaman 'chalchivtis' " (*PNE*, 5: 2).

[47] *PNE*, 5: 5: "se dieron a Motezuma por amistad ... tributavanle vnas mantas de quatro piernas y de ocho baras en largo y tres palmos de ancho cada pierna, y en estas mantas pintavan en medio un çerco grande y enmedio el sol, y otra ropa blanca menuda."

[48] *PNE*, 4: 47–48: "obedeçian por su Señor y Rey a Montesuma al qual tributaban y pagaban cada año por tributo vn presente en que le daban vna rodela que en su lengua llaman chimali dorada con mucho oro, y un quetzale hecho de plumeria muy rico, y un collar de cuentas de oro muy rico para el dicho Montesuma, y otro collar de la mesma suerte y manera para su muger ... cada vn año ... , y que demas desto daban otro tributo a vn Gouernador que el dicho Montesuma tenia puesto en vn pueblo que se dize Tustepeque ... al qual daban cantidad de oro y mucho cacao y algodon, maiz, chile, y frisoles, mantas, petates y de todos los generos de fructos que la tierra daba, demas de lo qual otro tanto tributo a un caçique que estaba por Señor en esta provincia, Señor natural della, de suerte que pagaban tres tributos en cada vn año."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

REMARKS ON TOWNS

632 *Xoconochco* has now become Soconusco San Benito.[a] It appears as one
712 of the garrison towns (*Mendocino*, fol. 18') with two governors, named "2. Quauhtli Tezcacouacatl" and "Atzin Tlilancalqui," according to their glyphs (cf. chap. viii, no. 37).

NATURE OF THE PROVINCE

197 *Inhabitants and languages.*—The Mayence language Mame and Náhuatl were the native languages of Xoconochco Province.

635 *Provincial borders in 1519.*—The province of Xoconochco was one
131 of the terminals of the Empire, and doubtless warred constantly on the east and west. The links which bound Xoconochco Province to the Empire and to remote Tochtepec are not clearly known, but it seems likely that they consisted in isolated fortresses.

TRIBUTE

651 *Tribute of the whole province.*—The tribute of Xoconochco Province comprised the following:

CLOTHING**

[301] 2 lip plugs of light amber, gold setting
2 long strings of chalchiuites

FOOD**

[262] 200 loads of cacao

OTHER GOODS**

[237] 1,400 bunches of feathers, blue, red, and green
160 whole skins of birds[b]
800 handfuls of yellow parrot feathers
800 handfuls of quetzal feathers
[415] 40 ocelot skins
800 rich tecomates for drinking cacao
[317] 2 brick-sized chunks of clear amber

632 *Tribute of the component towns.*—Xoconochco gave, in the early
651 colonial period, three annual tributes of goldpieces, each tribute being comprised of eight gold disks worth twenty-five pesos apiece.[c]

[a] Nuttall, "Chalchihuitl in Ancient Mexico," *American Anthropologist* (1901), 3: 232.
[b] Cooper Clark, ed., *Códice Mendocino* (1938), 1: 8v. [illegible] it as *Coinga amabilis* Gould.
[c] *PNE*, 1: No. 501: "Dan tres tributos cada ano y en cada vno ocho tejuelos de oro de a veynte e çinco pesos cada vno, de nueue quilates: pagando en tostones al Respeto."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

THE ROAD TO XOCONOCHCO

The tribute collectors of the Empire reached Xoconochco—which was so far away from the heartland that it paid only twice a year, as the month symbols on the *Matricula* page attest—by the same route that modern land travelers follow, that is, south and east of the Nudo de Cempoaltepetl. Ahuizotl, at the end of the fifteenth century, invaded certain key places, which linked this province thereafter with Tochtepec. The activities of Moctezuma II filled certain gaps without altering our general picture for this area. 487

The main centers occupied by the Mexicans to assure the route across the Isthmus of Tehuantepec and down the Sierra Madre to Soconusco are indicated on the map between provinces 29 and 30, Tochtepec and Xoconochco. The list, which might be expanded, has been formed from the conquest lists of the Mexican rulers.[a]

The reason why these towns do not appear in the *Matricula* as comprising a separate tributary province is debatable. They may have been depicted on some page now lost, or the Mexicans may have demanded from the towns only the right of transit.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

VII. THE MIXTEC-ZAPOTEC ZONE

101 197 IN EACH of the provinces of the vast zone we are about to consider, the cultural and linguistic groups known as Mixtec and Zapotec have flourished. There is some indication that in an earlier period the Mixtec extended beyond these provinces;[1] in any case, they and the Zapotec together provide a convenient denomination for the area, much of which fronted on still "unreconstructed" Mixtec city-states. Other cultures and languages there were, in bewildering abundance, within the same frontiers—Tlapanec, Mazatec, Cuicatec and so forth,—but the Mixtec and the Zapotec appear to have been the most advanced of all, and certainly were the best known to later times.

31. TEPEACAC

SOURCES OF THE MAP

635 114 Tepeacac was a great bastion, which long resisted the imperialism of the Mexica and later, when the Spaniards came, proved to be the key to the eastern plateau. This cabecera, together with twenty-three principal towns, is represented on page 20 of the *Matricula*, copied on folio 42' of the *Codex Mendocino*. The province extended across the center of southern Puebla. Its towns have been located principally on the [128] 1908 Puebla map of the Comisión Geográfico-Exploradora. Original name forms are compared with those of today in the following list:

103

MENDOCINO	1908 MAP
Acatzinco, 15	[No change]
Coatzinco, 9	Coatzingo
Chietlan, 5	Chietla
Epatlan, 7	[No change]
Huehuetlã, 4	Huehuetlan
Nacochtlan, 8	Necoxtla
Quatlatlauhcã, 10	Huatlatlauca
Quauhquechulan, 1	Huaquechula
Quauhtinchan, 12	Cuautinchan
Quechulac, 17	Quecholac

[1] E.g., east to Cozamaloapan and northwest to the skirts of Popocatepetl. Jiménez Moreno, "El enigma de los olmecas," *Cuadernos Americanos*, T. 5, N° 5 (1942), pp. 124–125.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

103

MENDOCINO	1908 MAP
Teopantlan, 3	[No change]
Tepeacac, 14	Tepeaca
Tepemaxalco, 18	
Tepexic, 11	Tepexi
Tetenanco, 16	
Ytzucan, 6	Matamoros Izúcar

Four towns elude identification: Atezcahuacã, Chiltecpintlã, Oztotlapechco, and Yeçochinanco.

NATURE OF THE PROVINCE

Inhabitants and languages.—Náhuatl and Otomí were the principal 197
languages of this province, though Chocho-Popoloca was spoken in Tecamachalco, Quecholac,[2] and Quauhtinchan.[3] Mixtec, in turn, was spoken by groups coming up from the south, some of which arrived in late times, during political upsets in Coayxtlahuacan.[4]

Provincial borders in 1519.—North of Tepeacac Province lay Tlax- 635
cala, with whom it skirmished continually. Its boundaries in the other 131
three directions were less insecure, as it was bordered by the Empire [648]
provinces of Huaxtepec on the west, Cuauhtochco on the east, and Yoaltepec on the south. In the last-named direction the frontiers have been placed south of Yzucar and Tepexic, and north of Acatlan and Piaztla. This choice is rather arbitrary, but in the 1580's Acatlan and Piaztla remembered former wars with the two towns depicted on the *Matricula* page,[5] hence may finally have been integrated into another province in the interests of peace.

Regional names.—Certain towns are listed in the relaciones of the 635
1580's as belonging to the Coatlalpan, a name which likewise appears 175
in this zone on the Ortelius map of 1579. These towns are Epatlan,[6]

[2] *PNE*, 5: 20: "en lo que toca a las lenguas, la general desta çiudad y pueblos de su probincia hablan la lengua ... mexicana ... eçeto que los pueblos de Tecamachalco y Cachulac comunmente [hablan] otra lengua toca llamada popolucan eçeto que toda la gente noble hablan poco o mucho la mexicana; anzi mysmo ay ynterpolados algunos naturales que hablan otra lengua que llaman otomy, que esta, fuera de la mexicana, es la mas natural en este reyno por haber muchos pueblos della."

[3] See the opening lines of Preuss and Mengin, *Die mexicanische Bilderhandschrift Historia Toltecs-Chichimecs* (1937).

635 Teonochtitlan,[7] Teopantlan,[8] and Ytzucan.[9] Tezozomoc speaks of
175 Coatlalpan as being situated near the Marquesado.[10]

TRIBUTE

651 *Tribute of the whole province.*—Tepeacac and her subject towns paid the following tribute to the Empire:

FOOD

[262] 4 wooden cribs (2 of maize and 2 of beans)*

OTHER GOODS

[317 4,000 loads of lime
314 4,000 loads of thick canes
281 8,000 loads of canes for arrow shafts
482] 800 deerskins
8,000 loads of *acayetl* "performes que usan para la boca"
200 *cacaxtles*[11]

632 *Tribute of the component towns.*—Ahuatlan (a) paid a tribute of
651 cane.[12]

Coatzinco supplied cane, shields made of the same material, spearheads, bows and arrows, and white lime.[13]

[701] Texalucan (b) claimed to have given military service only—the enemies including the distant Coixca.[14]

Çoyatitlanapa (c) paid a tribute of canes, spearheads, white lime, shields made of cane, and wild cotton for padding armor.[15]

---

[7] More exactly, Tepexuxuma, next door to Teonochtitlan. *PNE*, 1: No. 540.

[10] Tezozomoc, *Crónica mexicana* (1878), pp. 533–534: "los pueblos de Coatla[l]pan y ... la tierra caliente, que ahora llaman del Marquesado."

[11] Wooden frames for carrying goods on the back with a tumpline.

[12] *PNE*, 5: 82–83: "Dicen que en tiempo de su ynfidelidad fueron vasallos de Motecçoma y sus pasados, y que le seruian y tributauan rrodelas de canas maçiças que en lengua mexicana llaman otlatl."

[13] *PNE*, 5: 95: "Dicen fueron vasallos de Motecçoma y de los Señores de Mexico, y le seruian con rrodelas de cana maçiça, con canas fuertes, y nauajas para lanças, cal blanca, flecha y arco para pelear."

[14] *PNE*, 5: 86: "Dizen que fueron vasallos de Motecçuma y sus pasados," making war against the "prouinçia de Coyxco y captiuauan gente que lleuavan a Mexico a Motecçuma para que se sacrificasse." For Coixca, see section on Tepequacuilco, p. 17, n. 41.

[15] *PNE*, 5: 90: "En tiempo de su ynfidelidad eran de Motecçuma, señor de Mexico, y sus pasados dauanle de tributo cal blanca, canas maçiças grandes, y nauajas para poner en las lanças, y rrodelas de cana maçiça para pelear, y algodon: algodon siluestre para jacos y cosseletes que vestian los hombres de guerra, que todo lo rreferido lleuauan a Mexico."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

32. Yoaltepec

SOURCES OF THE MAP

The province of Yoaltepec occupies the right-hand third of page 18 of the *Matricula*, and the lower third of folio 40' of the *Codex Mendocino*. In the original codex only the cabecera is identified by an annotation in the roman alphabet—as is often done—though in the *Mendocino* all the towns are thus identified. 635 114

This province, which contained six principal towns, lay on the northwestern border of modern Oaxaca State, and perhaps extended into Guerrero. On the basis of the "Millionth Map" of the American Geographical Society, sheet "Ciudad de México," and a considerable number of documentary references, five of these six important towns, as well as a few others, have been located. The following table shows the correspondences between old and modern names: [128] 103

MENDOCINO	MILLIONTH MAP
Ehuacalco, 4	Calihualá
Patlanalã (?), 5	[See Remarks on Towns]
Tzilacaapan, 6	Silacayoápam
Yoaltepec (? 3)	[See Remarks on Towns]
Yxicayã (?), 10	[See Remarks on Towns]

One town remains quite elusive: Ychcaatoyac.

We may add to the list given above the following towns, which were minor subjects of the province: Acatlan (2), Ayoxochiquilazala (9), Piaztla (1), Tecomaixtlahuacan (8), and Ycpatepec (?) (7).

REMARKS ON TOWNS

Acatlan recognized Moctezuma and his forebears as overlords and claimed to be linked with the Mexican blood royal.[30] It has been placed in Yoaltepec Province because it formerly had wars with Ytzucan and Tepexic,[31] which were within Tepeacac Province, as we see in the *Matricula*. In the mid-sixteenth century it was bordered by Izucar, Tepexic, Petlaltzinco, and Chila, and this also tends to place it in the Yoaltepec sphere.[32] 632 131

[30] *PNE*, 5: 59: "Acatlan reconocía por supremo Señor en tiempo de su gentilidad a Moctezuma y sus antepasados los Reyes de Mexico."
[31] *PNE*, 5: 60.
[32] *PNE*, 1: No. 6.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 [712] *Ayoxochiquilazala* seems to have been the anchor of the Empire in this region. A local Mexican garrison consumed all the tribute, which never reached Mexico.[28]

Ehuacalco, suggests Troncoso,[29] may be the Calihualá [Cal-eual-lan] of today. The proposed identification seems reasonable.

Patlanalan is a name which apparently survives only in documents. The town was subject to Tonalá (a) and was half a league from "Çilacajoapa."[30]

Piaztla was probably "Old Piaztlan" (Huehuepiaztlan), which lay to the west of the site of the modern town. Among the towns subject to Piaztla in 1581—and probably also linked with it in 1519—were 632 131 Tuzantlan (c) and Ilamatzinco (b). These appear on the Puebla map of the Comisión Geográfico-Exploradora, 1908.

Yxicayan became "Xicayan de Tovar" in colonial days.[31] It confined with Puctla and Tlacomayztlauaca,[32] which are the Putla Santa Maria and Tecomaxtlahuacan of today. Xicayan de Tovar was nine leagues southwest of "Instlauaca" (Juxtlahuaca)[33] and four leagues in the same direction from Ayoxochiquilazala.[34] Northeast of the ancient Acuitlapan, Guerrero, are a C. Jicayan and a R. Jicayan which indicate the site. It should be pointed out that the Jicayán of today (near Tlacamama), also existing in the sixteenth century,[35] is a quite different pueblo.

Ycpatepec, which enjoyed a certain pre-Hispanic fame, may be located by piecing together a variety of references. Though it is described in the relación of Cuauhuitlan along with towns of the modern district of Jamiltepec on the Oaxaca coast, it is stated to be no less than thirty-five leagues to the northeast of those towns,[36] beyond a sierra, in the Mixteca Baja.[37] Elsewhere it is given as ten leagues from Mixtepec

[28] See Tribute of the Component Towns, below.
[29] *PNE*, 5: 238.
[30] *PNE*, 5: 238; *GPM*, p. 20. Its estancias were called Guatepec and Santa Clara.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

(subject to Tlaxiaco)[88] and three leagues from "Cilacayoapan."[89] With 632
all this information, the town may be placed fairly well. In the present 131
map it is identified tentatively with Montañas, a town on the Oaxaca map of the Secretaría de Agricultura y Fomento.[90] This lies south of Silacayoapam and may have fallen under the jurisdiction of south-lying Cuauhuitlan.[91]

Ychcatoyac, which has not been found, is also called "Atojocinapa" 632
in a list which names its encomendero as "el hijo de Pierres Gómez."[92]

Yoaltepec has been located from references only. When the Mexicans invaded the south, they took, in succession, the towns of Oaxtepec, Izucar, and Youaltepec.[93] "Ygualtepec" (the name suffered the same change as Yoallan–Iguala) was held by the encomendero of Ayoxochiquilazala.[94] The clearest reference, however, comes from a document [131]
dealing with Piaztla, which places Yoaltepec ten leagues straight south of that town.[95]

NATURE OF THE PROVINCE

Inhabitants and languages.—With Yoaltepec we enter the Mixtec 197
provinces. A codex in purely Mixtec style, for example, is preserved from Tecomaixtlahuacan,[96] and the relación of that town[97] tells us it is of Mixtec speech, as proves to be true of Ycpatepec.[98] The northern part of the province, on the other hand, seems to have been mexicano rustico, "because it is the province of Totolan"—a quite mysterious reference.[99]

---

[88] *RMEH*, T. 2, Appendix, pp. 142–143.
[89] *GPM*, p. 20; *PNE*, 5: 238.
[90] Ycpatepec was celebratedly mountainous.
[91] Three hints which may lead to its exact identification at a later time are: (*a*) the linking of "Hycpatepeque" with Tlacotepec, Tepexillo, and Los Remedios in a list of "Curatos Mixtecos" of the reign of Philip V (Bancroft Library, University of California, Mex. MS No. 8, fol. 221); (*b*) the Mixtec name, "yuca yua" ("Relación of Cuauhuitlan," *PNE*, 4: 158) or "yuca nuuyuh" (Reyes, *Arte en lengua mixteca* [1889], p. 90); and, finally (*c*), the names of the estancias of Ycpatepec (*PNE*, 5: 238), which are Santa María, Santiago, and San Juan. (*PNE*, 4: 155, adds San Pablo.)
[92] *ENE*, 9: 17.
[93] Discussed in the writer's forthcoming chronological study.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 131 *Provincial borders in 1519.*—North of Yoaltepec Province lay the Empire province of Tepeacac, and to the east that of Tlachquiauco, but to the south were other Mixtec peoples never subjugated by the Triple Alliance: Tototepec of Oaxaca and her allies. Ayoxochiquilazala was an outpost against these. To the west Tlapan and Quiauhteopan were Empire territory again.

TRIBUTE

651 *Tribute of the whole province.*—The tribute rendered by Yoaltepec was small but choice; it included gold and turquoises. It is listed as follows:

CLOTHING

[291 714] 400 large mantles**
1 warrior's costume with shield*

FOOD

[263] 40 jars of honey**

OTHER TRIBUTE

[316 533] 40 little gold disks, "the size of a Host" and as thick as one's finger*[41]
10 middle-sized turquoise masks (mosaic)*[42]

632 651 *Tribute of the component towns.*—Acatlan gave military supplies and food to the Imperial armies which passed through it and from time to time sent gifts of mantles and rabbitskins to its overlord in Mexico, as well as providing personal services. Certain gifts were received in return.[43]

[712] Ayoxochiquilazala, though a garrison town giving military service, also paid tribute of gold dust.[44]

[41] Cooper Clark, in his edition of the *Códice Mendocino* (1: 75), remarks that "it is reasonable to suppose that these gold disks . . . measured about three inches in diameter."

[42] The *Mendócino* commentary considers the turquoise symbol appearing with the masks to represent a separate tribute of turquoises, but this conclusion does not seem justified.

[43] As in Ocelotepec, in the province of Coyolapan, *q.v.*, *FNE*, 5: 55, says that Acatlan "solamente ... dava ... a la jente de guerra que por el pasaba" food and arms from an arsenal there, and " ... embiavan de quando en quando va presente al Rey de Mexico, de mantas y pellejos de liebres y de conejos." In the same source are mentioned the services rendered by various lords and their wives in the Imperial court, in eighty-day shifts.

[44] *RMEH*, T. 2, Appendix, pp. 147–148: "acudian con el tributo á montezuma y le davan oro en polvo y no le acudian con otra cosa porque en este dicho pueblo tenia montezuma jente de guarnicion aperçibida para las guerras y esta gente mexicana comian y gastavan las gallinas venados conejos y maiz que eran obligados á dar á montezuma."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Piaztla gave salt and wax annually, and aided the Imperial troops passing through the town by supplying them with war clubs, shields, arrows, and food.[a]

Tecomaixtlahuacan was under the rein lightly. It had its own lord and none other, we are told in the sixteenth-century relación, but it chose none the less to send Moctezuma gifts now and again, and tribute is the criterion of the present map.[b]

Ycpatepec acquired certain articles by trade with peoples thirty leagues away and then delivered them to the Mexican tax collectors in Teutla (or Tentla). These articles were green feathers, gold, and chalchiuites.[c]

Yxicayan gave a combination of dwarf peppers and mantles "and nothing else."[d]

33. Tlapan

SOURCES OF THE MAP

The province of Tlapan contained fourteen towns, according to the glyphs of the *Matricula* (p. 17) and the *Mendocino* (fol. 39'). In the *Matricula* only "Tlauhpā" is identified in a later hand; in the *Mendocino*, all towns are. Tlapan Province lay in the eastern extreme of modern Guerrero. Of its fourteen towns, seven have been located on the modern map. The following correspondence between ancient and modern place names has been established, the "Millionth Map" of the American Geographical Society, sheet "Ciudad de México," having served as base.

[a] *PNE*, 5: 78: Piaztla was " ... sujeto al Real Imperio de Mexico y ... en su sujecion llebauan cada año cantidad de sal y sera, de que daban a los Exercitos de Mexico espadas de pedernal, rodelas y flechas y comida quando pasaban por su pueblo a la conquista de lexas [*sic*] provincias, y no le davan en señal de sujecion otro tributo alguno."

[b] *RMEH*, T. 2, Appendix, p. 137: "algunas vezes contribuyan con algunos presentes de piedras etc. desque llaman chalchihuites á montecuma." The codex of this town (published by Schmieder) claims that the people of the town "nunca ... tributaron ni contribuyeron en cosa alguna para los dichos tributos de Mexico, y de todos eran libres y exentos" (Schmieder, *The Settlements of the Tuxpecec and Mije Indians* [1930], p. 79).

[c] *PNE*, 4: 161: "solian ser en tiempo de su xentilidad sexetos a Munteçuma ... le davan de tributo cada tantos meses plumas verdes y oro en polvo y algunas piedras verdes de poco momento: estas cosas iban a rescatar a otras partes fuera deste dicho pueblo, mas de treynta leguas, lo qual entregaban a los capitanes de Munteçuma que tenia puestos para el dicho efeto en Teutla" (or Teutla).

[d] *RMEH*, T. 2, Appendix, p. 152: "acudian con el tributo á montezuma al cual acudian con mantas y agi y no con otra cosa."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

103

MENDOCINO	MILLIONTH MAP
Acuitlapã, 7	[See Remarks on Towns]
Chipetlan, 1	Chiepetlán
Malinaltepec, 6	[No change]
Tetenanco, 3	Tenango Tepexi
Tlapã, 4	Tlapa
Totomixtlahuacã, 5	Totomixtlahuaca
Ychcateopã, 2	Ixcateopan

The remaining seven towns of the *Matricula* cannot be located with any certainty, though there are some additional data available regarding them. These towns are:

Acocozpã	Huitzannola
Ahuacatla	Ocoapan
Amaxac	Xocotla

Yualan

On the other hand, we may confidently add and locate the following subject towns, thanks to another source: Ayutla (8), Cintla (?) (10), Copalitech (11), and Tototepec (9).

REMARKS ON TOWNS

632 131 *Acuitlapan* is the Quitlapa of today, located southeast of Metlatonoc in the atlas of the Secretaría de Agricultura y Fomento. It is described in colonial days as "Cuytlapa," twelve leagues from Tlapan.[48]

Ahuacatla, not located, was five leagues from Tlapan, according to a report which gives it as "Ahuacatitlan."[49]

Amaxac probably corresponds to "Atlemaxac" or "Atlimaxax," which was a cabecera one league from Tlapan.[50]

Ayutla was clearly tributary,[51] and with it a series of seaboard towns including Cintla and Copalitech.[52]

Cintla seems to have lain close to the modern Juchitán(a).[53] It was one of the seaboard towns subject to Ayutla (*q.v.*).

[48] *GPM*, p. 106; *PNE*, 1: No. 217.
[49] *GPM*, p. 101.
[50] *GPM*, p. 101; *PNE*, 1: No. 82.
[51] *PNE*, 4: 260: "aquel pueblo de Ayutla antiguamente era de Moteçuma, [esa] todos los demas pueblos de la jurisdiçion que fueron sugetos."
[52] *PNE*, 4: 259: "antes que se ganase la tierra, eran todos los pueblos marítimos sujetos al dicho pueblo de Ayutla."
[53] Identification by the writer, in "A Western Extension of Zapotec: Further Remarks," *Tlalocan* (1944), 1: 361.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Copalitech, called "Copalitas" in the sixteenth century, was considered a seaboard town and thus anciently subject to Ayutla (*q.v.*).[68] 632

Huitzannola is called "Huitzaxola" elsewhere and is said to be an estancia of [A]cuitlapan.[69]

Tototepec, one of many towns of this name, is not on available maps, but may be located by references. Xochitonala,[70] which must be the Tonalá of today, was "de Ayutla tres leguas y otras tres de Tututepeque."[71] The same source notes: "La estancia de Tututepeque esta tres leguas de la mar." The inhabitants of Tototepec are said to be "mexicanos que quedaron alli por guarnicion que solia tener Montecuma." The town must have been the principal anchor of the Empire in this remote coast. 632 712 [101]

Xocotla, apparently, was a town three leagues from Tlapan[72] and should not be confused with the distant Yope-speaking town of the same name on the Río Papagayo. 632 131

NATURE OF THE PROVINCE

Inhabitants and languages.—The people of Tlapan Province bore two principal names, though they may have been one group ethnologically and linguistically. Those of the north were called Tlapaneca and those of the south Yope. Sahagún identifies the two, remarking that "these Yopime and Tlapaneca are the people of the region of Yopitzinco; they are called Yope because their district is called Yopitzinco and they are also called Tlapaneca, which means Ochre Men, because they painted themselves red . . ."[73] It should be pointed out, however, that although the people of Tlapan and Malinaltepec and the northern towns are said to speak Tlapanec, those of Tototepec and Xochitonala and the south are called Yope-speakers,[74] as if Yope were another tongue. Whether or not the Yope are to be identified with the Tla- 101 197

[68] *PNE*, 4: 257: "Declaro ser maritimo el pueblo de Copalitas por estar dos leguas de la mar, y tener vn rrio cavdaloso y una alaguna [*sic*] de pesqueria." This river has been identified with the Río Copala by the writer, "A Western Extension of Zapotec: Further Remarks," *Tlalocan* (1944), 1: 360.

[69] *GPM*, p. 106.

[74] *GPM*, p. 27.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

panec, a good part of the Yope remained independent of the Mexicans until the arrival of the Spaniards and gave the Spaniards themselves much trouble.

These Tlapanec and/or Yope seem to be linked with distant groups to the south and north. The nearest kin of the Tlapanec language is that found in Nicaragua,[a] but certain customs of the Yope are identical with those of the Apache.[b]

The recent discovery by Ortega of several codices from the Tlapanec zone provides us with a potential source of information on this formerly almost unknown region.[c] Though the codices are still unexploited, they have already shown that the Tlapanec used a pre-Mexican[d] calendar system. There is less novelty in the observation that the god Xipe Totec came to the highland via the Yope. His temple, which stood where the western towers of the Cathedral of Mexico now stand, was called Yopico.

Provincial borders in 1519.—To the northwest of Tlapan lay the province of Tialcoçauhtitlan, to the north that of Quiauhteopan, and to the northeast Yoaltepec—the borderlands of the Mixteca. Tlapan Province extended down to the Pacific Coast to the fortress of Tototepec (not to be confused with the Mixtec kingdom of Tototepec in adjacent Oaxaca). On both sides of this bastion war was continually being waged. The greater portion of the Yope roamed unconquered in Yopitzinco to the west; and to the east was a doubtful region of independent Mixtec peoples, with the other Tototepec of Oaxaca looming as a background power.

TRIBUTE

Tribute of the whole province.—Ortega's startling discovery of the balance of the "Codex Humboldt I"[e] and its identification by Toscano

[a] On the Tlapanec language, see Radin, "The Tlapanec Language of Guerrero," *International Journal of American Linguistics* (1933), 8: 45–72, and Schultze Jena, *Indiana III* (1938).

[b] The only Yope ethnography surviving is in a document published by Federico Gómez de Orozco ("Costumbres, fiestas, enterramientos y diversas formas de proceder de los Indios de Nueva España," *Tlalocan* [1945], 2: 60–61).

[c] See Toscano, "Los codices tlapanecas de Azoyú," *Cuadernos Americanos*, T. 10, N° 4 (1943), pp. 127–136.

[d] That is, with the signs immediately anterior to the familiar Calli-Tochtli series as year-bearers.

[e] Published by Seler, Bulletin 28, Bureau of American Ethnology.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

as the "Nómina de Tributos de Tlapa y su senorio al Imperio Mexi- 651
cano" give us unparalleled material for a future study in detail of the 212
tribute of this province. We now have the bookkeeping from both sides, that of the conquerors and that of the conquered. Until the codices are fully published, however, we can only remark the abundant tribute of gold, confirmed by the *Matricula* and reconfirmed by the excavations of Atliztac, which may have been included in the province."

The *Matricula* and *Mendocino* specify: 651

CLOTHING

400 bundles of mantles and women's blouses** [291
402 bundles** of little red-striped mantles**
800 bundles of large mantles** 714]
2 warriors' costumes with shields*

OTHER TRIBUTE

10 strips of gold "de quatro de dos en ancho y de largo tres quartos de vara," and the thickness of parchment [316
20 bowls of gold dust, each bowl of 2 *almoçadas* capacity 45]
800 bowls called tecomates, "the good kind they drink cocoa from"

Tribute of the component towns.—We have testimony regarding 632
the tribute of one town, Ayutla, in both the pre-Hispanic and the 651
early colonial periods. On certain other towns, only information about the latter period is available.

Ayutla and near-by towns joined in giving Moctezuma the following [415
every six moons: a bar of heavy gold, three fingers thick; gourds; deer 291
and tiger skins; fish and cotton.** In the mid-sixteenth century it gave 248
40 measures of gold dust and various items of clothing quarterly, as 262]
well as a turkey daily and the services of three Indians in a cacao grove.**

** Nogueira, "Importancia arqueológica del descubrimiento de objetos en Texmeliacan, Guerrero," *Boletín del Museo Nacional* (1933), Epoca II, 2: 42–44.

* Corrected from the figure of the *Mendocino* commentary, 400.

** *PNE*, 4: 260: "era de Moteçuma ... le davan vna vara de oro maçiaco de gordor de tres dedos, y 'tecomates' que son como calabaças, y cueros de venado y pescado y algodon y cueros de tigueere, y que todos los dichos pueblos ... le davan este tributo antiguamente cada seys lunas."

** *PNE*, 1: No. 28: "dan cada ochenta dias quarenta pesos de oro en polvo y dos mantas de dos braças cada vna, damascadas, y dos cotines grandes y ocho manillas y quatro camisas y quatro naguas y cada dia vna gallina de la tierra y mas tres yndios de servicio en vna huerta de cacao y todos juntos quando es menester la benefician."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 Tlapan in the mid-sixteenth century gave 62 pesos, 3 tomines of
632 gold quarterly, 3 loads of honey, 5 pots, and 3 wax in pellets.[71]
[316 263 253] Tototepec, likewise about a generation after the Conquest, gave 50 measures of gold dust and certain articles of clothing quarterly, and
[146] daily gave the services of seven Indians, and a chicken to the Calpixque.[72] A

34. Tlachquiauco

SOURCES OF THE MAP

635 The province of Tlachquiauco was not large. It contained three
114 principal towns, according to folio 45' of the *Mendocino Codex*, the folio copied from the recto side of a lost leaf (page "22A") which followed Coyolapan and preceded Xoconochco in the original manuscript. Of the three towns of Tlachquiauco Province, one has not
[28] been located, but the other two (lying in northwestern Oaxaca) have been identified as follows on the "Millionth Map" of the American Geographical Society, sheet "Ciudad de México":

[103]

MENDOCINO	MILLIONTH MAP
Achiotlan, 4	S. Miguel Achiutla
Tlachquiauco, 3	Tlaxiaco

The town which has eluded identification is Çapotlan.

Mixtepec (2) and Tlacotepec (1) are added from other sources.

REMARKS ON TOWNS

632 *Mixtepec* was subject to Tlachquiauco in the days when the latter still held out against the Mexica, and presumably fell with it.[73]

Tlacotepec appears in some of the younger Moctezuma's conquests jointly with Ycpatepec (in the province of Yoaltepec).

Tlachquiauco is a name which has suffered considerable corruption, but there is no novelty in the identification of the town.

Çapotlan appears vaguely linked with Etla and Macuilxochic in one source.[74]

---

[71] *PNE*, 1: No. 725: "dan cada ochenta dias sesenta y dos pesos y tres tomines de oro en poluo y tres cargas de miel y çinco xarros y tres cargas de çera en pellas." The statement also includes similar data from near-by towns.

[72] *PNE*, 1: No. 28: "dan cada ochenta dias çinquenta pesos de oro en poluo y çinco naguas y ocho mantillas, y cinco mantas grandes; mas dan siete yndias de seruicio cada dia y una gallina al Calpixque."

[73] *PNE*, 4: 142: "el caçique de tlaxiaco que era a quien estos de mixtepeque reconocian por señor tenia guerra con montecuma."

[74] *ENE*, 16: 68.

A [i.e. A civil functionary in whose care the public stores were entrusted - Analyst]

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

Inhabitants and languages.—This province seems to have been formed 635
out of a vanquished Mixtec city-state, at a very late period indeed in 648
the Empire's history. It is listed as one of three principal pre-Hispanic powers of the region in the "Relación de Teoçapotlan,"[28] though we know that it lost its independence in 1511 or 1512.[29]

Provincial borders in 1519.—To the south lay sister Mixtec states 635
such as Puctla and Zacatepec, which defied the Mexicans successfully, 131
to the east and north the Empire province of Coayxtlahuacan, and to the west that of Yoaltepec. 635

Regional names.—Tlachquiauco lay in what is commonly called the Mistecapan.

TRIBUTE

The only data available on the tribute of Tlachquiauco Province 651
comes from the *Codex Mendocino:*

CLOTHING [291

400 large mantles**
1 warrior's costume and shield* 714]

OTHER GOODS*

20 vessels of gold dust [316
5 sacks of cochineal
400 bunches of quetzal feathers 237]

35. Coayxtlahuacan

SOURCES OF THE MAP

The province of Coayxtlahuacan appears on page 21 of the *Matricula* 635
and is copied on folio 43′ of the *Codex Mendocino*. It contained eleven [131]
principal towns,[30] all of which have been found. They lay in northern 114
Oaxaca. In the *Matricula* the towns of "Cohuaxtlauacã," "Tamaçolapan," and "Tepozcololan" are identified in the roman alphabet; and

[28] *PNE*, 4: 193: "dizen los yndios que poco antes que los españoles viniesen solos auian los de Tututepec que estos eran guerreros por si, y los de Tlachiaco que tambien eran guerreros por si, y Monteççuma que era el Señor de México."

[29] Anderson and Barlow, "The Maize Tribute of Moctezuma's Empire," *Annals of the Missouri Botanical Garden* (1943), 30: 414–415.

[30] Cortés (*Cartas y relaciones* [1866], pp. 152–153) speaks of twelve towns in the province of "Coatznaca."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

635 114 in the same codex the right-hand margin is so badly worn that the glyphs of Tamaçolan and Mitla are no longer visible. These are preserved in the *Mendocino* copy, however. The present map is based [128] chiefly upon the "Millionth Map" of the American Geographical Society, sheet "Ciudad de México." Correspondences between former and modern names are given below:

103

MENDOCINO	MILLIONTH MAP
Coaxomulco, 11	Cuasimulco
Coayxtlahuacã, 6	Coixtlahuaca
Cuicatlan, 7	Cuicatlán
Mictlan, 18	Mitlatongo

We may expand this list with the following towns, known from other sources to have been subject:

Atlatlaucca, 12	Malinaltepec, 10
Chila, 2	Papaloticpac, 8
Icxitlan, 3	Petlaltzinco, 1

Tepeucila, 9

REMARKS ON TOWNS

632 *Atlatlaucca* was visited by tax collectors from Coayxtlahuacan.[78] It may be found in the Oaxaca map of the atlas of the Secretaría de Agricultura y Fomento.

[712] *Coayxtlahuacan* was a celebrated Mixtec stronghold, the downfall of which was one of the great events of the fifteenth century. The Mexicans made it a garrison and center for tribute collection.[79]

Chila (2) admitted being subject to the Empire; the town denied

[78] *PNE*, 4: 165: "estos dos pueblos de Atlatlaucca y Malinaltepeque reconoçian por Rey a Munteçuma ... dos yndios ... que se llamauan 'calpisques' ... hacian rrecoxer [el tributo] y lo lleuauan a la prouinçia de Cuestlaua a, donde el dicho Munteçuma tenia puesta su frontera de gente de guerra."

[79] *PNE*, 4: 165, for example, speaks of "Cuestlauaca, donde el dicho Munteçuma tenia puesto su frontera de gente de guerra." See also Papaloticpac, below. When the invading army of Cortés reached Inacar de Matamoros, Coayxtlahuacan threw off the Mexican yoke and surrendered to the Spaniards. (Cortés, *Cartas y relaciones* [1866], pp. 152–153).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

paying tribute, but "the lords of Chila, when it pleased them to," ex- 632
changed presents with Moctezuma.[a]

Icxitlan was a subject town which gave no tribute beyond feeding the highland troops that passed through it.[b]

Malinaltepec (10) sent its tribute to Coayxtlahuacan.[c] This Malinaltepec, which is stated to lie eight leagues northeast of Atlatlaucca and [131]
five leagues west of "los Yolos" [Yoloxonecuilan], appears on Bevan's map.[d] It should not be confused with the nearest of several homonyms, that is, with the Malinaltepec southwest of Atlatlaucca.

Mictlan, as Jiménez Moreno has pointed out,[e] must be the present Mitlatongo.

Papaloticpac paid tribute to its cacique, and he to Moctezuma;[f] probably the Papalotiquipaque of the sixteenth century[g] is one of two towns called Papalo today, southeast of Quiotepec.

Petlaltzinco, like Icxitlan, paid its tribute by supplying the armies of the Empire with food and men.[h]

Tepeucila had been subjected by Moctezuma shortly before the Spaniards arrived.[i]

Xaltepec appears on the Oaxaca map of the atlas of the Secretaría de Agricultura y Fomento.

Yancuitlan may be found on the 1912 map of the Comisión Geográfico-Exploradora.

Çoçolan was conquered by the younger Moctezuma, as will be detailed in the second part of this work. It is mentioned as a garrison [712]
town on folio 17' of the *Mendocino*, with two governors—a "tlacatectli" and a "tlacochtectli" (cf. chap. viii, no. 37).

---

[a] *PNE*, 5: 66: "era subjeto al ymperio de la ciudad de México ... embialle [a Moctezuma] los senores de Chila, quando les agradaua, algunos presentes de joyas de oro y mantas," etc.

[b] *PNE*, 5: 75.

[c] See Atlatlaucca, above.

[d] Bevan, *The Chinantec* (1938).

[e] *Códice de Yanhuitlán* (1940).

[f] *PNE*, 4: 90: "tributaban los naturales a su Señor natural y este a Monteçuma ... que llevavan a las guarniciones donde Monterçuma tenia gente de guerra."

[g] *PNE*, 4: 88.

[h] "El dicho pueblo de Petlaltzingo era subjecto al Ymperio mexicano, y no dauan ningun tributo mas de que eran obligados a dar a los exercitos de Mexico que por el dicho pueblo de Petlaltzingo passauan bastimentos, y asi mismo servian con alguna gente de guerra, y no otra cosa alguna" (*PNE*, 5: 70).

[i] *PNE*, 4: 95: "Al tienpo que vinieron los españoles era Señor natural de este pueblo vn cazique que se dezia canchuchu camiñas, y en tienpo de este los sujeto Monteçuma."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

197 *Inhabitants and languages.*—The province of Coayxtlahuacan was Mixtec in speech, except for Cuicatec (extending eastward from Cuicatlan), Chinantec (north and east of Atlatlaucca), and, curiously enough, Chocho-Popoloca in the very heart of the province (Tamaçulapan to Coayxtlahuacan).

101 In Coayxtlahuacan Province centered the rich and complicated
175 Mixtec culture, concerning which some detailed information has been preserved for us in such codices as the Nuttall and the Vindobonensis. Most extensive data on the pre-Hispanic history and ethnography of this region can be recovered from these manuscripts when they are fully studied. Many of the towns of this province were originally important city-states, with their own dynastic histories.

171 Among the notable cultural differences separating the peoples of
805 this province from the Náhua, are such variant calendar systems as the Mixtec, studied by Jiménez Moreno,* and the Cuicatec, in the still inadequately investigated "Codex Fernández Leal."

635 *Provincial borders in 1519.*—At the height of the Empire of Mocte-
131 zuma, Coayxtlahuacan had certain half-intimidated (though not actually subjected) zones to the north, the sprawling Empire province with its Oaxaca garrison to the east, the still resisting Mixtec city-states** to the south, and Tlaxiaco and other Mixtec towns, recently overrun, to the west.

TRIBUTE

651 *Tribute of the whole province.*—The province of Coayxtlahuacan was exploited for the following items:

CLOTHING

[291] 400 bundles of quilted mantles, richly decorated**
400 bundles of mantles, striped red and white**
400 bundles of black-and-white mantles**
400 bundles of loincloths**
[714] 400 bundles of women's blouses and skirts**
2 warriors' costumes together with shields*

* *Códice de Yanhuitlán.*

** Such as Puctla, Zacatepec, and others the relaciones of which appear in *RMEH*, T. 2, Appendix.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

OTHER GOODS* 651

2 strings of chalchiuites
800 bunches of quetzal feathers [316
1 royal emblem called *tlalpiloni* 231]
40 sacks of cochineal
20 bowls of gold dust

Tribute of the component towns.—A few details exist concerning 632
the way in which the payment of this rich tribute was apportioned. 651

Atlatlaucca and a fellow town paid cochineal, cotton mantles, green and varicolored feathers, and chalchiuites, all of which they purchased from other towns by means of little cotton mantles which [436]
served as money. They also gave military aid.*

Cuicatlan gave feathers, gold, and "piedras" to the tribute collectors, who relayed these items to higher officials. The collectors themselves were given (mordida ?) mantles and food, and sometimes fruit was sent to the Mexican garrisons in the Mixteca.*

Chila's presents of gold jewels and mantles have been mentioned.*

Iexitlan claimed to have given no tribute other than gifts presented on visits to the capital. These presents were rich feathers and precious stones and live snakes to feed the birds of the Royal Aviary.*

Malinaltepec shared in giving the items listed under Atlatlaucca, above.

Papaloticpac gave gold dust and food for the Mexican garrisons.*

* *PNE*, 4: 165. The fellow town was Malinaltepec: "le dauan en cada pueblo de çierta cantidad de grana cochinilla, mantas de algodon y plumeria verde y de todas colores, y unas piedras verdes ... y estos generos de cosas las iban a buscar a otros pueblos los yndios, y las rescatauan a trueque de unas mantillas de algodon del tamaño de vn pliego de papel, que corria entre ellos por moneda ... y quando los capitanes de Munteçuma les mandavan que embiasen gente de guerra para ir a otras conquistas, lo hacian."

* *PNE*, 4: 185: "Y para quel dicho su Señor tributase a Montecçuma, de quien era su sujeto, buscaban los naturales plumas, oro, piedras, y a los cobradores que venian a cobrar este tributo por Montecçuma, les davan mantas, comida y otros presentes, sin lo que pagavan al gran Señor que hera Montecçuma, y algunas vezes enbiavan frutas a los questaban en las guarniçiones de Montecçuma en la provinçia de la Mixteca."

* See Chila, above.

* *PNE*, 5: 75: " ... era sujeto al real ynperio de mexico, no le daban tributo ninguno mas de quando yvan a verle a mexico le llevaban en presente plumas ricas y piedras preciadas y culebras bibas para dar a comer a las aves de holateria y muchos jeneros de aves preciadas que tenia." The Royal Aviary stood where the later Convento de San Francisco was built.

* "En tiempo de su yufidelidad y antes que los españoles los sujetasen obedecian a Montecçuma ... . Lo que tributaban los naturales a su Señor natural y este a Montecçuma era oro en polvo, bastimentos que llevavan a las guarniçiones donde Montecçuma tenia gente de guerra" (*PNE*, 4: 90).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 651 Petlaltzinco was obliged to feed Empire troops when they passed through the town.[*]

Tepeucila contributed mantles and tiger skins bought from their neighbors, and a few feathers.[*]

Texopan gathered these items for the tribute: parrot feathers, slaves, and small amounts of cochineal.[*]

Çoçolan was a gold-producing region which caught the eye of Cortés very quickly—doubtless because of the display of tributes in the capital.[*]

36. Coyolapan

SOURCES OF THE MAP

635 114 Coyolapan was a huge province, the heart of the State of Oaxaca. The principal native towns numbered eleven, nine of which have been located. They are depicted on page 22 of the *Matricula* and in the *Mendocino* copy on folio 44'. The cabecera and one other town are identified in roman letters in the *Matricula*. The modern map which [128] has served to reconstruct the province is the American Geographical Society's "Millionth Map," sheet "Ciudad de México." Correspondences between former and modern names follow:

103

MENDOCINO	MILLIONTH MAP
Camotlan, 3	Camotlán
Coyolapan, 21	Cuilapam
Etlan, 9	Etla
Guaxacac, 19	Oaxaca de Juárez
Macuilxochic, 22	Macuilzóchitl
Octlan, 29	Ocotlán
Quauxilotitlan, 10	[See Remarks on Towns]
Teticpac, 26	Teítipac (San Sebastian)
Tlalcuechahuayā, 24	[See Remarks on Towns]

Two towns represented on the *Matricula* page remain to be located: Quatzontepec and Teocuitlatlan.

[*] *PNE*, 6: 70: " ... era subjecto al Ymperio mexicano, y no dauan ningun tributo mas de que eran obligados a dar a los exercitos de Mexico que por el dicho pueblo de Petlaltzinco passuan bastimentos."

[*] *PNE*, 4: 95: " ... los sujeto Montecuma y le sirvieron tributandole mantas y cueros de tigres que conprauan de los pueblos comarcanos y algunas plumas."

[*] *PNE*, 4: 55: " ... estaban subgetos a su rrey Motecçuma ... daban de tributo a su rrey Motecçuma esclavos, plumas de papagayos y grana en poca cantidad."

[*] Cortés, *Cartas y relaciones* (1866), p. 152: "envié á buscar oro á la provincia de [illegible]."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

Besides the towns identified, many lesser subject towns, discovered 103
through sources other than the *Matrícula* and the *Mendocino* copy, should also be listed:

Atepec, 2	Tecuicuilco, 5
Coatlan, 33	Teotitlan del Valle, 23
Cuixtlan, 32	Teotzacualco, 11
Chichicapan, 30	Teozapotlan, 25
Eztetlan (?), 13	Tlacolula, 27
Huiztepec, 15	Tlaliztacan, 20
Itzquintepec, 12	Totomachapa, 16
Iztepexi, 8	Xaltianguisco, 4
Miahuatlan, 31	Xilotepec, 17
Mictlan, 28	Yoloxonecuilan, 1
Ocelotepec	Zenzontepec, 18
Quauxiloticpac, 14	Çoquiapan, 7

REMARKS ON TOWNS

Atepec and three neighbors "recognized Moctezuma as lord."[100] 632

Coatlan, in some unspecified period, rebelled against its chief and sent ambassadors to Mexico to arrange its incorporation into the Empire.[101] Today the town seems to have broken up into a cluster of satellites, of which a rough center has been taken for the map.

Coyolapan, now Cuilapa, ought really to be called "Quacuyolapan"—if we are to trust the relación of that town.[102]

Chichicapan first belonged to Teozapotlan, but was fighting off attacks from Mixtec neighbors at the moment of the Spanish Conquest, [648]
at which time its inhabitants settled matters by allying themselves with Moctezuma.[103]

Cuixtlan (32) warred with Tetiquipa to the south, and this may [648]
possibly indicate the limits between the province of Coyolapan and the free Mixtec state of Tototepec.[104]

---

[100] *RMEH,* T. 2, Appendix, p. 123. Tecuicuilco, Atepec, Çoquiapa, Xaltiango: "Todos estos quatro Pueblos Reconocian por Rey a mantecçuma el qual los Abia conquistado Por fuerças de armas."

[101] *FNE,* 4: 123: "Este dicho pueblo y sus naturales en su antiguedad eran sujetos a vn caçique que se llamaba Coeczi ... hasta que les hizo çierto agrabio y se rebelaron contra el, y ... embiaron parias a la çuidad de Mexico a Montecçuma ... el qual los recibyo debaxo de su amparo."

[102] "Relación de Cuilapa," *Tlalocan* (1945), 2: 22.

[103] *FNE,* 4: 115.

[104] *RMEH,* T. 2, Appendix, p. 115.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 *Eztetlan* was near the modern Tepantepec.[300]

[712] *Guaxacac* (as Huaxac[ac]) is one of the garrison towns mentioned on folio 17' of the *Mendocino* (cf. chap. viii, no. 37) as being governed by a "tlacatectli" and a "tlacochtectli." The fortress was actually located on the Cerro del Fortin (Acatepec or Ecatepec), according to the "Relación de Cuilapa" (*Tlalocan* [1945], 2:20).

Huiztepec and certain neighboring towns together paid tribute to Moctezuma.

Itzquintepec was a town the identification of which involves the whole question of the "pueblos peñoles." Probably we may identify it with the modern town of Peñoles.

Iztepexi recalled in the 1580's that "certain Mexica" had overcome them, whereupon they paid double tribute, as the Mixtec also exploited them.[301]

Macuilxochic remembered only being subject to Teozapotlan,[302] but figures along with the rest of the Empire in the *Matricula*.

Mictlan (28), since it was subject to Teozapotlan, was subject to the Mexica.[303]

Ocelotepec was a town the inhabitants of which "anciently had Moctezuma, lord of Mexico, as their lord."[304]

Quauxiloticpac, now Huajoloticpac, is derived from "quauxilotl"

---

[300] A collective relación which includes this and the two following pueblos exists (*RMEH*, T. 2, Appendix, pp. 185–191). Six pueblos in all are listed, in this order: Itzquintepec, Eztetla, Quauxoloticpac [*sic*], Huictepec [*sic*], Totomachapa, and Jilotepec, "los quales estan como aqui van puestos uno en pos de otro y corren norte sur." Now three of these appear on any map: No. 3, Quauxoloticpac (11 leagues from Antequera or Oaxaca City), is Huajolotipac; No. 4, Huiztepec (12 leagues from Antequera), is Huitepec; and No. 6, Jilotepec (17 leagues from Antequera and defined as "çerro al modo de una mazorca de maiz"), is Elotepec. In view of these three fixed points, Itzquintepec (6 leagues from Antequera and 9 leagues from Teotzacualco) is most likely the modern Peñoles. Eztetla (lying between Itzquintepec and Quauxoloticpac and 7 leagues from Teotzacualco) should fall somewhere near modern Tepantepec. And, finally, Totomachapa (like Jilotepec, 10 leagues from Zola) is perhaps the modern Yucocando. (Totomachapa was 8 leagues from Teotzacualco, and Jilotepec only 6.) All these six pueblos peñoles "fueron ... en tiempo de su jentilidad de monteçuma señor de mexico al qual tributaban oro y mantas de algodon."

[301] *PNE*, 4: 16: "ciertos mexicanos los subjetaron por mandado del Señor de Mexico ... espeçaron a tributarles asi a los mexicanos, questauan en Guaxaca por Monteçuma, y a los mixtecos por el señorio que sobrellos tenian, temiendose de los unos y de los otros ... ."

[302] *PNE*, 4: 102: "El gobierno que tenian hera lo que les mandava el señor del pueblo de Teoçapotlan ... ." See Teozapotlan, below.

[303] *PNE*, 4: 111. See Teozapotlan, below.

[304] *PNE*, 4: 138: "en su antigüedad tenyan por senor a Monteçuma, señor de México ... ."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

in the relación of the "pueblos peñoles," hence we have restored the 632
proper spelling.

Quauxilotitlan appears in the sixteenth-century sources as "Guaxilotitlan," two leagues from Etlan, the name being derived from "quauxilotl." It should not be confused with Quauxiloticpac, mentioned above. The inhabitants of Quauxilotitlan "were subject to Mocteçuma for many years before the Spaniards came."[110]

Teotitlan del Valle was subject first to the Zapotec lords (at Teoza- [648]
potlan, and then to the government in exile at Tehuantepec) and afterwards to the imperialistic Mixtec of Coyolapan.[111] And Coyolapan appears in the *Matricula.*

Teotzacualco was a Mixtec city-state which had made an "arrangement" with Moctezuma a few years before the Spanish invasion.[112]

Teozapotlan, or "Zaachila," as it is better known, was the traditional 632
seat of Zapotec power. Since various pueblos of the Valley of Oaxaca, 648
in their sixteenth-century relaciones, are said to be subject to Teoza- 175
potlan, no mention being made of Moctezuma, it is important to point out that Teozapotlan fell before the Mixtec of Coyolapan late in aboriginal history (the Zapotec cáciques then retiring to Tehuantepec). Coyolapan in turn was subjugated by the Triple Alliance.[113] Consequently, any town said to be subject to Teozapotlan may be considered to be subject to the Mexica.[114] The relación of Teozapotlan speaks only of a near-by Mexican garrison close to Oaxaca City which had been put there "by means of good friendship and without war." Teozapotlan is stated to have been quite independent (a reminiscence of earlier and better times?) and to have paid tribute to this Mexican [651]
garrison "only in order to be friendly."[115] Tribute is tribute.

---

[110] *PNE,* 4: 197: "los naturales del estaban subjetos muchos años avia, antes que los españoles binieran, a Moteçuma."

[111] *PNE,* 4: 105.

[112] *RMEH,* T. 1, Appendix, p. 175: "En tiempo de su gentilidad reconocian á su señor natural que abian trayido del pueblo de tilantongo ... que pocos tiempos antes que los españoles binyesen los sujeto montezuma por conciertos que entre ellos vbo."

[113] "Relación de Cuilapa," *Tlalocan* (1945), 2: 19–20.

[114] The truth of this assumption is confirmed by the relación of Macuilxochic (*PNE,* 4: 102: " ... les mandava el señor del pueblo de Teoçapotlan") and by the glyph of that town in the *Matricula;* also, by the relación of Teticpac (*PNE,* 4: 111: "en tiempo de su infidelidad tenian por señor al cacique de Teoçapotlan y despues tuvieron a Monteçuma señor de Mexico") and see also the *Matricula.*

[115] *PNE,* 4: 193: "dizen los yndios que poco antes que los españoles viniesen solo huian los de Tuxtepec que estos eran guerreros por sí, y los de Tlachisco que tambien eran

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 *Tecuicuilco* owned Moctezuma as lord after being conquered by force of arms.[116]

Teticpac was subject to Teozapotlan, and later to Moctezuma.[117]

Tlalcuechahuayan may be found on the Oaxaca map of the atlas of the Secretaría de Agricultura y Fomento.

Tlacolula, by virtue of having been subject to Teozapotlan, was subject to Moctezuma.[118]

Tlalixtacan is another subject of Teozapotlan, and therefore, it is to be inferred, of the Mexicans also.[119]

Totomachapa may be found on the 1912 map of Oaxaca made by the Comisión Geográfico-Exploradora.

Xaltianguisco, the Jaltianguis Santa Maria of today, is cited under its old name in a document of Ixtepexi,[120] as well as in several other places.

Xilotepec was one of the "pueblos peñoles," all of which were subject to the Empire.[121]

Yoloxonecuilan was a town the name of which has atrophied to "los Yolos." In its earlier form the name of this place appears in the conquest lists of the Empire, jointly with the names of such towns as Xaltianguisco and Itztitlan (6) (Ixtlán de Juárez?). Yoloxonecuilan had, moreover, the same cura as Atepec.[122]

Zenzontepec appears late in the conquest lists of the Empire.

Çoquiapan and certain neighboring towns are said to have "recognized Moctezuma as lord."[123]

---

[651] guerroros por si, y Monteçuma que era el Señor de Mexico: de todos estos tres solo auia aqui quando vinieron los españoles vna guarniçion juncto adonde es aora la ciudad de Antequera, la qual guarniçion era de Monteççuma: esta dizen los yndios que avia puesto alli por via de buena amistad y sin guerra, para pasar por alli adelante a Tecoantepec y Guatimala ... y dizen que a estos mexicanos no les dauan ningun tributo, sino por via de amistad, sino que el rrey de Teoçapotlan se tenia su señorio absolutamente."

[123] See Atepec, above.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

Inhabitants and languages.—At the time of the Spanish Conquest the predominant language of the province of Coyolapan was Zapotec, though the Zapoteca had lost their political power. Two other groups also inhabited the province.[128] If we draw a line from north to south through Malinaltepec, Etla, Huaxolotitlan, Oaxaca, and Teozapotlan, then west to Totomachapa and Xilotepec, we delineate the western limits of Zapotec. The region beyond this line is Mixtec. In the northern panhandle, the fringe of the area in which Chinantec was spoken was a little south of Coaxomulco (1).[129]

The advanced and dissimilar cultures of the Zapotec and Mixtec, especially in the frontier zone of Oaxaca City, have become known in recent years through the investigations of Dr. Alfonso Caso.[130]

Provincial borders in 1519.—The province of Coyolapan was one of the far corners of the Empire. To the west and south it faced unfriendly Mixtec city-states, chiefly the huge realm dominated by Tototepec de Oaxaca. Eastward lay the Mixe and the "unprotected" Zapoteca. Both of these were uneasy frontiers. In the west and north, however, lay the strong Empire garrison of Coayxtlahuacan, in the province of the same name.

TRIBUTE

Tribute of the whole province.—Coyolapan and its subject towns paid the following tribute to the Triple Alliance:

CLOTHING**

400 bundles of richly worked mantles
800 bundles of large mantles

FOOD*

4 wooden cribs (2 of maize, 1 of beans, and 1 of chian)

OTHER GOODS*

20 gold disks, the size of an average plate and as thick as one's forefinger
20 bags of cochineal

[128] Chatino, the tongue of the Zenzontepec region, may be classified with Zapotec.

[129] García Granados, "Contribución para la geografía etnográfica y lingüística de Oaxaca," *Boletín de la Sociedad Mexicana de Geografía y Estadística* (1934).

[130] In addition to various monographs, Dr. Caso has also written a good summary in his *Las culturas mixtecas y zapotecas* (1939).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651 *Tribute of the component towns.*—Certain elements of the fore-
632 going tribute may be traced.

Atepec, Çoquiapan, Tecuicuilco, and Xaltianguisco acquired the
[439] tribute items exacted from them—green (quetzal?) feathers and chalchiuites—by barter with other regions.[107]

Coatlan gave gold and mantles, receiving military protection in return. (The gold tribute was three marks of gold dust quarterly in early colonial days.[108])

Ixtetlan and five other towns jointly paid a tribute of gold and cotton mantles.[109]

Huiztepec, as one of the "pueblos peñoles," gave gold and cotton mantles.

Itzquintepec gave part of a joint tribute of gold and cotton mantles.

Iztepexi, which had two masters, Mixtec and Mexican,[110] paid them tribute in base gold, green feathers, deer, maize, and turkeys; also, its inhabitants rendered personal services to the Mexican garrison near Oaxaca. The gold and feathers were acquired in a unique fashion, being earned by going to the Isthmus and working six months or a year there cultivating lands.[111]

Ocelotepec gave gold dust and mantles and cochineal, "all in small quantities and once a year," and received in return mantles, sandals, and feathers of many colors.[112] This exceptional treatment was doubt-

[107] *RMEH*, T. 2, Appendix, p. 123, speaks of "çierto tributo que le pagaban en cada pueblo de çierta cantidad de Plumas verdes y Piedras verdes" obtained in trade.

[108] *PNE*, 4: 133. To Moctezuma "le tributaban oro en polbo y mantas, y el tenya quidade denbialles sienpre gente de guarnyçion." To their colonial encomendero "segun dizen los antiguos naturales cada yndio tributaba en cada ochenta dyas tres marcos de oro en polbo."

[109] For the tribute of this and the two following towns, see n. 105 above.

[110] See n. 106 above.

[111] *PNE*, 4: 16. Suffering from double demands, "les pagauan de tributo oro baxo y plumeria verde y benados que tomauan en los montes y mayz y gallinas de la tierra, y leña, acudiendo con servicios personales a los mexicanos en Guaxaca ... ," all without fixed tribute dates, "y la plumeria y oro que asi tributauan lo yban a buscar a Teguantepeque y a la provincia de Soconusco e Guatemala, arquilandose en carga mercadurias de mercaderes y en beneficiar y cultivar tierras en la dicha provincia donde se detenian seys y siete meses y va año, y otros se ocupauan en lo que por los señores y caçiques deste pueblo les hera mandado, y por lo susodicho les pagauan oro y plumas verdes, y esto trayan y guardauan para pagar se tributo, y por tener a dos señores a quien acudir con los dichos tributos muchas veces quedauan confusos, y no ossauan rebelarse contra ellos porque no los destruyesen a todos."

[112] *PNE*, 4: 138. Ocelotepec "en su antigüedad tenyan por señor a montaçuma, señor de Mexico, al qual tributaban oro en polbo y mantas de que ellos se bisten, y grana, todo en poca cantidad, y en cada va años [*sic*] vna vez, lo qual el recebia ... y el les enbiaba otras cosas de mas balor como eran mantas y los 'cactles' que ellos traen, y plumas de muchos colores."

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

less due to the strategic position of Ocelotepec on the Tototepec frontier. 651 632

Quauxiloticpac and five other towns gave a tribute of gold and cotton mantles.[188]

Quauxilotitlan paid white cotton mantles and women's blouses, loincloths, little copper hoops, green birds called "xiuhtototl," and maize.[189]

Teotitlan del Valle rendered tribute of gold dust, cotton mantles, [567] fowl, bundles of aji, and slaves.[190]

Teotzacualco paid chalchiuites and feathers and mantles of cotton and henequen, and also made special milpas of maize, beans, chia, and cotton—all of which went to the local Mexican garrison.[191] [712]

Teticpac gave fowl, hares, rabbits, deer, and honey.[192]

Tlacolula gave military service only.[193]

Tlaliztacan paid in feathers, mantles, and military service.[194]

Totomachapa joined the other "pueblos peñoles" in a tribute of gold and cotton mantles.[195]

Xilotepéc, like the other "pueblos peñoles," gave gold and cotton mantles.[196]

---

[188] See Itzquintepec, above.

[189] *PNE*, 4: 197: "estaban subjetos ... a Motecçuma, y el señorio que sobre ellos tenya hera que le tributauan mantas de algodon blancas 'y 'guaypiles' que son a manera de camyzas, quos vna bestidura que las mugeres traen, y vnos pañetes que en la lengua mexicana se dizen maxtle, y vnas coronas de cobre a manera de guirnaldas, y vnos pájaros verdes que en la dicha lengua se dicen xihuytotol, y maiz."

VIII. THE HEART OF THE EMPIRE

37. Çitlaltepec and Tlatelolco

SOURCES OF THE MAP

175 On pages 1 and 2 of the *Matricula* and on folios 17ᵛ and 18ᵛ of the *Codex Mendocino* appear the glyphs of the towns of a tributary province, together with a group of glyphs of a different nature. To segregate the information useful for this study, a minute examination of these pages is unavoidable.

The body of the *Matricula* follows a certain scheme: around the outer edges of the page a band of place glyphs ordinarily appears and, within this three-sided frame, figure paintings of the objects paid as tribute by the towns listed. The first leaf, however, departs from this scheme on both its recto and verso sides, and forms the object of the present remarks.

These pages of towns and tributes (pp. 3–28 of the *Matricula* as it exists today), together with two leaves which were separated from the manuscript more than a century ago (the oft-mentioned American Philosophical Society leaves) are copied, more or less faithfully, as "la segunda parte de esta ystoria" in that tripartite compilation, the *Codex Mendocino*, which is divided into: (1) "History of Conquests," (2) "Tribute," and (3) "Ethnography."

In the body of the *Matricula* and its copy ("la segunda parte de esta ystoria") the tributary condition of a wide area is told in detail, but no mention is made of the very environs of the capital, Tenochtitlan.

Preceding the beginning of section 2 ("Tribute") of the *Codex Mendocino* there appears a double page (fols. 17ᵛ and 18ᵛ) which is partly equivalent to the first leaf of the battered *Matricula*. The copy is infinitely more legible than the original, and must be drawn on to understand the latter. Rather exceptionally, in this copy (*Mendocino*, fols. 17ᵛ–18ᵛ) the materials of the original (*Matricula*, pp. 1–2) are rearranged, and, since it is the more complete, we cannot be entirely sure of the order of the original glyphs, though we may be certain that their content was copied faithfully.

The content of these pages (which indicates that the first part of the *Mendocino* is a copy of a lost group of pages of the *Matricula*) is two-

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

fold: we have a list of certain garrison towns with their governors—175
the framework of the Empire—and we have a list of those towns near Tenochtitlan of which no mention is made in the long series of tribute pages. (Even here, however, only the towns are listed, and not their tribute.)

Frontier garrison towns mentioned with Çitlaltepec.—Page 2 of the 175
Matricula is divided in two by a horizontal line, and the upper half is 712
subdivided by a vertical line, three divisions resulting. In the upper left appears a glyph of a box filled with water. The *Mendocino* identifies it as Atzacan (unlocated). Beside it is a nopal, which is identified in both manuscripts as Xoconochco (Soconusco). Below are two towns which lay close together in the northern extreme of Puebla (see chap. iv, pp. 61–62): Atlan and Teçapotitlan (also identified in both manuscripts).

Glyphs representing the four garrison towns appear on folio 18' of the *Mendocino,* accompanied by the comment that these towns and certain others had special governors "porque no se rrebelasen." To this group the *Mendocino* adds a town glyph from the preceding page of the *Matricula:* Oztoma, the great Guerrero fortress on the Tarascan frontier.

Page 1 of the *Matricula* is badly effaced, but we can recognize the remnants of four town glyphs: Oztoma, in the lower left-hand corner (copied out of place in the *Mendocino,* as noted above); and three others (*Mendocino* copy, fol. 17'), Poctepec (lower right, unlocated) and, identifiable with the two remaining tepetl-glyphs of the *Mendocino* (fol. 17'), Huaxac[ac] (Guaxacac) and Çoçolan in the upper part of the drawing.

This is all the *Matricula* tells us. Probably a whole sheaf of pages is lost from the beginning of this remarkable manuscript: a section referring chiefly to the conquests of the Tenochca and their allies, which we know only through the *Mendocino* (sec. 1). In the present case, however, we need not lament the lack of further information, for we have it—though certainly rearranged—in the copy (e.g., Oztoma).

Three other glyphs of key towns in various parts of the Empire appear in the *Codex Mendocino,* folio 17', in the upper center, upper right corner, and right margin center respectively: Quauhtochco

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

175 (Huatusco, Veracruz), Quecholtenanco (south of Chilapa), and
712 Yztteyocan in the province of Quauhtochco. With these three glyphs, preserved only in the *Mendocino* and lost from the *Matricula*, our information about the garrison towns ends.[1]

175 *Tributary towns in the Çitlaltepec zone.*—Eleven other town glyphs
632 which must have been included in a section now lost from the *Ma-*
651 *tricula* are given in the *Mendocino* on folio 17", ranging down the edge of the page and across the bottom in approved form. The towns fit neatly into our map, as they lie north and south of Tenochtitlan. We shall have to assume that they are the missing tributaries. They are treated as such in this section, even though we know nothing of their tribute.

103 Of the eleven towns of the tributary province, nine can be located; and these nine towns, listed below, form a series which is to be seen
[128] on the 1:100,000 map, "Valle de México," of the Secretaría de Agricultura y Fomento (1937):

MENDOCINO	1937 MAP
Acalhuacan	[See Remarks on Towns]
Acolnahuac	[See Remarks on Towns]
Coatitlan	[No change]
Chalco Atenco, 6	Chalco
Puputlan, 4	Popotlan
Tzonpanco, 2	Zumpango
Xaltocan, 3	[See Remarks on Towns]
Yztacalco, 5	Iztacalco
Çitlaltepec, 1	Citlaltepec

Other towns seem to have vanished: Coatlayauhcan and Huixachtitlan.

635 *Tlatelolco.*—A certain gap occurs in the very center of this queerly shaped province, between northerly Xaltocan and southerly Yztacalco,

[1] Bernal Díaz (*Historia verdadera de la conquista de la Nueva España* [1904], I: 302) speaks of three of the four major garrisons of the *Matricula*, Xocoxochco, Ozoma, and Atlan or Teçapotitlan: "... parece ser que como el gran montezuma tenia muchas guarniçiones, y capitanias de gente de guerra, En todas las proviaçias, que siempre estavan junto a la rraya dellos, porque vna tenia En lo de soconusco por guarda de lo de guatimala y chiapa, y otra tenia En lo de guaçaqualco y otra capitania En lo de mechuacan, y otra a la rraya de panuco, Entre tuçapan [? Tuchpa], y vn pueblo que le pusimos por nombre almeria [Nautla] ques En la costa del norte ...." He substitutes Costzaqualco (of which he was encomendero) for Atzacan, omitting Huaxacac [Guaxacac] and Çaçolan in Oaxaca, and Quecholtenanco in Guerrero—as well as the towns for which no governors are mentioned, Pucuejec, Ytzayocan, and Quauhtochco.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

but this space may be filled very precisely with the administratively 635
separate center of Tlatelolco and its dependencies. The position given to Tlatelolco in the *Matrícula* (the American Philosophical Society fragment) and in the *Mendocino* (fol. 19' constitutes a problem with which the writer has dealt elsewhere.[8]

A glance at the map will explain why the Çitlaltepec group and Tlatelolco have been treated together here, although administratively they formed separate tributary provinces.

REMARKS ON TOWNS

The Lake of Texcoco formed the common geographic denominator 131
of these towns.

Acalhuacan, with its miniscule population of forty houses, was the 632
subject of a dispute between the encomendero of Quauhtitlan (BX, 2) and the natives of Tlatelolco in the year 1537,[9] and the record of this dispute is sufficiently enlightening to enable one to find the approximate location of Acalhuacan. Since it was disputed along with Atzompan, it has been placed, like that town, to the north of the Sierra de Guadalupe, but on the western (Quauhtitlan) side of the lake—all quite provisionally. The name, "Place of Canoe-Owners," indicates the lacustrine site.

Acolnahuac (located after the printing of the map) was a point on the Azteca-Mexica migration route—now San Bernabé, on the Calzada de Camarones, between Azcapotzalco and the Nonoalco highway.[10]

Coatlayauhcan is mentioned by at least one source, "Anales de Cuauhtitlan," as one of the stopping places of the migrating Azteca-Mexica.

Huixachtitlan probably lay a little south of Xaloztoc. Studies made after the printing of the map indicate that it lay on the migration route of the *Códice Huitzilopochtli*, between Tequepayuca (now Cerro de

[8] Barlow, "Tlatelolco como tributario de la Triple Alianza," *Memorias de la Academia Mexicana de la Historia* (1945), 4: 204–207.

[9] "Carta de los indios principales," in S. Montoto, ed., *Colección de documentos inéditos para la historia de Hispano-América* (1927), I: 84. It is also mentioned in Lehmann, *Die Geschichte der Königreiche von Colhuacan und Mexico* (1938), par. 472.

[10] Barlow, "Los caciques coloniales de Tlatelolco," *Memorias de la Academia Mexicana de la Historia* (1944), 3: 552–553.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

632 Santa Isabel, west of the Villa de Guadalupe) and "Coatepetl" [? Santa Clara Coatitlan]. Tezozomoc (*Crónica mexicana* [1878], p. 283) places it between Chiquiuhtepec (Cerro del Chiquihuite) and Coatitlan. Huixachtitlan should not be confused with Huixachtepetl, now Cerro de la Estrella, in the south of the Valley.

Puputlan was an insular settlement situated on the highway which ran from Tenochtitlan to Tlacopan. It still exists, though not as a separate town; it has now been incorporated into the City of Mexico. Popotlan is noted chiefly for the ancient *ahuehuete* called "El árbol de la Noche Triste."

Xaltocan, curiously omitted from the 1937 "Valle de México" map, may be found on the map of the State of Mexico, in the 1941 *Libros y revistas* atlas.

NATURE OF THE PROVINCE

197 *Inhabitants and languages.*—In the days of the Empire, Xaltocan was an Otomí center,[8] whereas Tlatelolco was Náhuatl-speaking. The southern tip of the province (Chalco-Atenco) extended into another Náhuatl-speaking zone—that of the Chalco tribe.

635 *Provincial borders in 1519.*—This northern lake region faced the
131 remnants of the Chichimec Empire on the east (the province of Acolhuacan). To the north and west lay those of the later Tepanec Empire, centering in the provinces of Quauhtitlan and Quahuacan. Southwest lay the mainland province of Petlacalco, between the mountains and the lakes, down to the pass which leads into Morelos State today, around Amecameca.

TRIBUTE OF TLATELOLCO

651 Owing to the fragmentary condition of our evidence (a group of disordered glyphs in the *Mendocino* copy without a *Matricula* original by which to check), it is not possible to say anything regarding the tribute of the Çitlaltepec zone—unless, by chance, it may have been included in the reckoning for Tlatelolco, given below.

For Tlatelolco the evidence is confusing; nevertheless, the writer ventures to present an outline of Tlatelolco's tribute, defended elsewhere.[9]

[8] Carrasco's thesis on the Otomí (in press) details its history.

[9] Barlow, "Tlatelolco como tributario de la Triple Alianza," *Memorias de la Academia Mexicana de la Historia* (1945), 4: 208–213.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

651

CLOTHING

80 Huaxtec warriors' costumes, together with shields* [291]
800 bundles of wide mantles (quarterly) 714

FOOD (quarterly)

40 baskets of cacao ground with maize [262]
40 baskets of chian pinolli

OTHER TRIBUTE

Perpetual repair of the *teocalli* of Huitznahuac[7] [358]

38. PETLACALCO

SOURCES OF THE MAP

On the verso side of the American Philosophical Society leaf (2A) of 635
the *Matricula* and on folio 20[r] and 20[v] of the *Codex Mendocino* the 114
tributary province of Petlacalco is represented. Just as Çitlaltepec 131
and Tlatelolco included the northern lakes, so this province included
the Lake of Chalco and its southern shore—the Pedregal. The tribute-
gathering center lay in the zone of once powerful Azcapotzalco. On [128]
the 1: 100,000 map "Valle de México" of the Secretaría de Agricultura 103
y Fomento (1937) we find a number of the towns of this province:

MENDOCINO	1937 MAP
Auchpanco	Ayapango
Cocotlan, 15	[No change]
Colhuacacinco	[See Remarks on Towns]
Cuitlahuac, 11	Tlahuac
Huiçilopochco, 9	Churubusco
Mizquic, 14	[No change]
Olac, 12	[See Remarks on Towns]
Petlacalcatl, 8	[See Remarks on Towns]
Tecalco	[No change]
Tecoloapan, 7	
Tepopulan, 16	[No change]
Tezcacoac	[See Remarks on Towns]
Tzapotitlan, 10	Zapotitlan
Xico, 13	[No change]

The list of missing towns, however, is extensive:

Acapan	Tlaçoxiuhco
Nextitlan	Toyac
Tepechpan	Xaxalpan
Tequemecan	Yopico

[7] San Juan Huitznahuac, jurisdiction of Azcapotzalco, D.F. (?).

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

REMARKS ON TOWNS

632 An extensive zone to the south of Lake Chalco is rendered uninhabit-
[133 able by the lava flow, or "Pedregal," emitted by the Ajusco Mountains,
311] which form the valley rim. If any small settlements existed in this area, their tribute was probably reckoned as a part of that collected from some major town in the region of Xochimilco or Tepoztlan.

Auchpanco is identified by Acosta with Ayapango.

Colhuacacinco,[8] later San Cristobal, lay on the shore of Lake Xaltocan, east of Tzonpanco (2).

Olac is a barrio of Xochimilco.[9]

632 *Petlacalcatl* is the inscription under the glyph of a house made of
114 grass mats, in the *Mendocino*. It occupies the usual place of the cabecera in the manuscript, and like all the other towns was originally followed by the word "pu[ebl]o." A later hand has struck this out and has replaced it with the word "gobernador," perhaps under the influence of the double (and doubtful) annotation about "Acolhuacã" and "Acolmecatl calpixqui" (tribute collector) which heads Acolhuacan Province.

That something is wrong is evident from the form of the original annotation. It is probably a place glyph, but the annotation takes the form of a personal glyph. I have chosen to read it as Petlacal*co*. The result is the same, for the Petlacalcatl, on the facing *Mendocino* page, was a head tribute collector, and the Petlacalco[10] was the "audiencia" building in the Tenochtitlan palace, which also housed a majordomo in charge of the granaries.[11]

632 *Texcacoac*[12] is a barrio of Tepotzotlan, and consequently we should judge that it lay north of Tecoloapan (7).

[8] Located after the printing of the map, "dista del pueblo de Tiçayuca vna legua hazia el sueste" (*PNE*, 3: 44 and n. 2).

[10] Sahagún, *Historia general de las cosas de Nueva España* [1938], I: 166.

[11] *Ibid.*, II: 311.

[12] Located after the printing of the map; it is mentioned in the Ayer "Fragment of a Village Book," and, as Texcacoa, in García Cubas' *Diccionario*.

8: Barlow E-4 (no date)1949 NU7 Aztec NU7

NATURE OF THE PROVINCE

Inhabitants and languages.—The northern part of this province was 101
the heart of the Tepanec zone. The Tepanec tribe is assumed—with 197
little proof—to have been Náhuatl-speaking. To the south were two other conquered tribes of better-known affiliation, the Chalca and Xochimilca, mutually related.

Provincial borders in 1519.—South of Petlacalco lay the sterile lava 635
flows which separated it from the province of Chalco (Chalco-Tlal- 131
manalco, not Chalco-Atenco), a province curving down through the mountain passes to Tepoztlan. To the west was the province of Quahuacan, and to the north Quauhtitlan, both at one time Tepanec strongholds. Eastward lay the lake provinces of Çitlaltepec and Tlatelolco.

Regional names.—At least the zone around Petlacalco itself be- 635
longed to the former Tepanecapan—the Tepanec area subject (until 1428) to Azcapotzalco.

TRIBUTE

Tribute of the whole province.—The following materials were col 651
lected by the tribute gatherers to Petlacalco:

CLOTHING*

65 warriors' costumes with shields [291
2,400 loads of mantles of "twisted" cloth 714]
800 loads of colored mantles
400 loads of loincloths
400 loads of women's clothing

FOOD*

1 bin of beans [262]
1 bin of chian
2 bins of huauhtli

[p. 134 is blank]

THE CALPULLI IN THE SOCIAL ORGANIZATION OF THE TENOCHCAS

/El Calpulli en la Organización Social de los Tenochca/

by

Arthur Monzon

Mexico, 1949

(Publications of the Institute of History, First Series, Number 14)

9:Monzon--2 E-4 (no date) 1949 NU7 Aztec NU7

/p. 7/ INTRODUCTION

/p. 9/ Chapter 1

THEORIES CONCERNING THE SOCIAL ORGANIZATION OF THE TENOCHCAS

/2/ This work considers some aspects of the social organization of the Tenochcas, inhabitants of what was the island of Mexico-Tenochtitlan (1), as it existed about the time of the arrival of the Spanish around

1. The term used to designate the inhabitants of this place at that time has traditionally been Aztecs. Actually it is an inadequate term because it includes other groups in other places. The term, that for this reason will be used to designate them, will be Tenochcas, which can be translated as "inhabitants of Tenochtitlan."

the year 1519.

By 1877 it could be said that in relation to its importance, no subject had been written so much about as that of the Mexican aborigines and the Spanish Conquest (2). Now, seventy years later, this is

2. Morgan, L. H., 1877, p. 204.

even more the case, and there is an enormous number of works, of every kind and length, about the inhabitants of Mexico, especially those living in the central part of the Valley of Mexico. A contributing factor in creating this situation is the attraction which is exercised on the investigator, in part by the cultural richness of ancient Mexico, in part by the dissatisfaction with the way in which past authors, in accord with the ideas of their day, dealt with, presented or interpreted the unrelated and meager data at our disposal about this area in the period with which we are dealing.

The study which is here presented tries to justify itself for the same reasons. Its subject, the calpulli in the social organization of the Tenochcas, had been originally much more ambitious (3),

3. Kinship and Property as a Basis of the Social Organization of the Tenochcas.

/2/ attempting to elucidate all the characteristics of their social organization, and had to be reduced for various reasons. It was suggested to the author by the courses "Archeology of Mexico and Central America" given by Professor Alfonso Caso, "Analysis of the Sources for Mexican History" given by Professor W. Jiménez Moreno, and "Social and Economic Organization" given by Dr. Paul Kirchhoff, in which it was noted that /p. 10/ many fundamental aspects of the social organization of the inhabitants of Mexico which obtained at the time of the arrival of the Spaniards, were unknown, particularly the basis for their organization; and that there was historical material and theoretical possibilities for making a reinterpretation, even with the scant data available in this respect.

Of course the basis of the social organization of the Tenochcas is not the only unknown aspect of a community as complex as was that of Mexico Tenochtitlan. There are a great many unknown aspects, which are very different in nature, but which do not have the same relative importance for all investigators: some are fundamental for those scholars who are interested in making universal generalizations (4) such as, for example, the manner in which those laws which are

4. Tax, Sol., 1937, p. 3.

valid for all societies, obtained in the Tenochca community. In the social organization of the Tenochcas one can also look for the pattern of happenings, dates, and persons, that is, the unique and outstanding occurrences in the Tenochca historic community. And one can have an interest in finding historic laws, that is, the principles which governed the development of the social events in the Tenochca community in the evolutionary phase through which it was passing just prior to the arrival of the Spanish.

With respect to the first group of problems, the aspects common to all societies, the author holds to the position that it is not of great scientific interest to show that the same happened in the Tenochca community as has happened in all human societies. The second group of subjects—the more particular—do not make up the content of this study either, because they are already being investigated by other people and it appears to him urgent that the singular social events of our community be examined scientifically, which entails their consideration as a result of the social forces which were active in the period in which they appeared. In the third group of subjects are

121 included the problems which this study addresses: it begins with the principles which governed the social life of the Tenochca community in its historical context without discussing if this was the result of divergent, convergent or internal evolution, or of degeneration, or of acculturation, etc.

The problems treated here can be traced in the following terms:

a) To elucidate if there were clans among the inhabitants of Mexico Tenochtitlan just before the arrival of the Spanish, and if in the affirmative, what type they were.

b) To elucidate if at this time there existed any deep social stratification among them and what were its characteristics. /p. 11/

c) To elucidate if, about the time of the arrival of the Spanish, their social relations were molded by one or other of these previously mentioned factors, or by neither of them (5).

5. To elucidate the type of government—as a manifestation and proof of the existence of a determined type of society among the Tenochcas—is undoubtedly a problem which can be resolved on its own after knowing the basic social organization. It is not attempted in this study except in so far as it helps resolve the other problems.

114 Regarding these problems, the opinions of investigators—although they may not have outlined them exactly in the same terms—have been divided into two camps which make completely different affirmations and neither of which by itself explains the characteristics which we know the Tenochcas had. Some authors—among whom are those who actually initiated the discussion of this subject—like Bandelier (6) and Lehman (7), considered essentially that, in the

6. Bandelier, 1878, 1, 11.

7. Lehman, W., 1909, p. 107, 108.

period to which we refer, the Tenochcas "still" had a gentile organization, putting a great stress on the existence of the calpullis which they considered equalitarian exogamous clans. Other authors such as Moreno (8), Caso, (9), Kroeber (10), White (11), Toscano (12), etc.,

114

8. Moreno, Manuel M., 1931, p. 14 ff.

9. Caso, Alfonso, 1942, p. 156; 1946, various lectures.

10. Kroeber, A. L., 1923, p. 359.

11. White, L., 1940, p. 33.

12. Toscano, S., 1946, p. 779.

are opposed to discerning such features in the Tenochca society and have tried, in special studies or in a few lines, to demonstrate the falseness of this point of view, maintaining that the Tenochcas of this period no longer had a gentile society, placing great emphasis on the existence of their social classes, their organized commerce, their wars of conquest, etc., and consider that the calpulli was simply a territorial division or whatever, but not a clan.

These two positions in a certain way complement each other, but really exclude each other in the form in which they have been presented, it not being possible simply to bring them together in order to have an idea of what was going on in the Valley of Mexico up to the time of the arrival of the Spanish—as some other authors have done, who actually sustain a third position, such as Vaillant (13),

13 Vaillant, G.C., 1941, p. 108 ff.

Thompson (14), Murdock (15), and in a certain respect, Acosta (16),

14. Thompson, J.E., 1933, pp. 105, 119.

15. Murdock, G.P., 1934, pp. 372, 373.

16. Acosta Saignes, M., 1945, p. 21.

who present /p. 12/ the Tenochca society as having, at one and the same time, exogamous clans and marked social classes both with equal or very similar importance, or with exogamous clans in transition through internal evolution to a society with social classes.

Most remarkable is that all these investigators have arrived at such different conclusions working approximately with the same facts and

114 consulting the same sources. So much so that one of them, Bandelier, the leader of those who hold that the Tenochcas had exogamous clans, during a long period held the opposite point of view (17) and only

17. Bandelier, in White, L., 1940, 1, Introduction.

after many arduous discussions with Morgan came to change his stand, contributing, nevertheless, a great number of arguments for both positions.

In order to understand this situation it is necessary to follow, at least in a general fashion, the process of the discussion which at first sight appears to revolve about the use of certain terms. The discussion was initiated by Bandelier (18), but actually it was not he who

18. From a scientific point of view there is no need to take into account the feudalistic conception of the conquerors, although we have necessarily to avail ourselves of their data.

outlines the problem of elucidating the bases of the social organization of the Tenochcas, but rather Morgan, and it is to him that we have to go in order to understand the origin and the development of all these positions. Morgan, among other things of various value, made the discovery that social forms could be ordered in an evolutionary line, and that in doing this, one could see a correlation between the characteristics of inventions and discoveries and human institutions; there appearing in the course of human history two successive plans of organization: one based on the personal relations of kinship ("societas") and the other based on territory and property (19) ("civitas").

19. Morgan, L.H., 1877, p. 54, etc.

Although even before Morgan's work there was talk of the difference between bonds originating in kinship and those originating in territorial situation (20), actually it was Morgan who gave meaning to

20. Maine, 1861, cited by Lowie, R.H., 1937.

this distinction, making evident the great difference between

114 communities based on kinship through common descent and communities based on territorial division and land ownership; as well as the different position on the scale of human evolution which one or other base will bring about. Morgan proposed an evolutionary scheme of all human societies including in it societies with matrilineal exogamous customs /p.13/ as a first evolutionary stage, societies with patrilineal exogamous customs as a later evolutionary stage, societies clearly based on the ownership of land and on territorial division as a stage even higher, and societies which he considered to be in transition between these steps of a unilinear evolution (21). Although Morgan

21. Morgan, L.H., 451, 452, 333, 334, etc.

was not the first person to speak of societies with exogamous customs, since they were already known from an earlier date (22), it was Morgan

22. Latham, 1859; Bachofen, 1861, cited by Engels, 1891, and by Lowie, 1937.

who was first to attempt to systematize them as special forms of social organization based on kinship through common descent, and to give an explanation of their origin and of their evolution from a society based on the systematization of sexual relationships up until the society based on ownership of land and territorial distribution appears, at the same time trying to demonstrate that there is an intimate relationship between the various aspects of culture which each evolutionary period evinced. At the same time Morgan affirmed that humanity shunned incest and that for that reason one could not expect to find groups with endogamous customs (as some authors thought (23)) which according to

23. MacLennen, 1886, cited by Engels, 1891, and by Lowie, 1937; Lubbock, 1884, pp. 93, 135 ff.; Giraud Telon, 1874, cited by Engels, 1891.

his theory had disappeared quite at the beginning of social evolution.

Morgan's well-ordered scheme with two fundamental types of human societies, one based on kinship through common descent ("societas") with matrilineal or patrilineal clans, the other based on territorial division and on the ownership of land ("civitas"), was widely accepted by many investigators since actually it introduced for the first time the

114 systematization of very extensive data whose evolutionary significance nobody had attempted to see as a whole. It was a scheme that was taken almost without modifications by some investigators, which is precisely that happened with those who studied the society of the Tenochcas, resulting that while some maintained that it was a community of the "societas" type, that is, that it was based on kinship through common descent (24), other authors maintained that it was a

24. Bandelier, 1878, p. 599 ff.; Lehmann, 1909, etc.

community of the "civitas" type, (25) that is, based on territory and

25. Moreno, M., 1931, p. 16, 82, etc.

property (26), or that it was in transition between the two extremes

26. White, L., 1940, p. 33, 35, etc.

(27), according to the emphasis which they saw in the data and which

27. Acosta Saignes, M., 1945, p. 21.

convinced them in one or the other of these two directions.

/p. 14/ In fact the discovery that social forms could be ordered in an evolutionary sense can be considered as a definite advance in the social sciences, accepted by the majority of schools although conceived in a way which differs from the typically Morganist (28). The

28. Lowie, R. H., 1946, p. 240; Schmidt, W., 1939, pp. 11, 12; McIver, 1937, p. 485, etc.

same can be said of the existence of two fundamentally different types of societies (29). But it must be accepted that some of Morgan's

29. Kirchhoff, P., 1944, p. 1; Radin, P., 1931, p. 1, etc.

affirmations—which were made with relatively meagre data and in a first attempt to embrace all knowledge about human societies—have been, in the course of new studies, considered inexact, as surely they

114 are, and that there are new theoretical acquisitions and new discoveries which surely ought to be taken into account in order to understand the basic social organization which the Tenochcas had at the time of the arrival of the Spanish.

Perhaps among the more important modifications to Morgan's work is the acceptance that the scheme of unilinear evolution of human society—which had been rejected from the beginning by investigations in this field (30)—is certainly outmoded now (31), and we

30. Maine, 1861, loc. cit.

31. Schmidt, W., 1939, p. 11; McIver, 1937, p. 485; Lowie, R.H., 1937, p. 59; Kirchhoff, P., 1941, p. 1, etc.

should think of the possibility of evolutionary radiation, of internal evolution, acculturation, degeneration, etc., in order to establish a correct scheme (31a).

31a. Sorokin makes a good criticism of the classical evolutionary theories, in: Dinamique Socio-culturelle et Evolutionisme: in: Sociologie au XXme siècle, Paris, 1947.

Another of the important additions to Morgan's work is that of Engels who, accepting Morgan's scheme, stressed that in reality the differences between the types of communities "societas" and "civitas" were based rather upon the fact that the first had their basis in the systematization of sexual production, that is, in reproduction ("gentiles"), while the second were based in the production of objects, which is to say, economic production ("políticas") (32). This is a

32. Engels, F., 1891, pp. 5, 6.

very important addition, although this author and those that followed him in his ideas also accepted the Morganist idea that societies based on kinship could only be unilateral and exogamous, and that, in general terms, social evolution was unilinear. Some authors

114 criticized Engels' manner of viewing social evolution and his introducing phenomena of sexual relationship as the basis for one type of society; they made /p. 15/ systematicizations of the social organization of humanity considering that everything could be explained through economic production (32a). But it appears that this is a

32a. Cunow, 1926.

theoretical regression surpassed by Engels himself (33) upon dealing

33. Before Engels and other investigators of his mind accepted the systematization proposed by Morgan, Karl Marx had proposed a systematization of human societies into four types: Asiatic, Ancient, Feudal and Modern, basing his opinion principally on the characteristics of economic production (Marx, K., 1859, p. 11). From this point of view Marx studied Modern Society (the capitalistic one) thoroughly, and recently Wittfogel has done the same regarding Asiatic Society, which he prefers to call Oriental (Wittfogel, K. A., 1928).

with societies relatively or really primitive.

Another important modification to Morgan's work deals with the fact that the most primitive societies, still extant in the modern era, present a more simple organization than the clan organization, with extended families [macro-familias], frequently with monogamy without traces of promiscuity or group-marriage (34). Relative to this,

34. Krause, F., 1932, p. 182; Schmidt, W., 1922, p. 142 ff.

Morgan's assertion that the Kamilaroi and the Hawaiians (and groups like these) represent the same social situation, and the most ancient form of organization (35), could not be considered acceptable, groups

35. Lowie, R. H., 1937, p. 75.

having been encountered surely more primitive, and with great differences among these.

114 In addition the supposed evolution from matrilineal clans to patrilineal could not be proved, since appearing as distinct complexes, although related, in concrete cases it was evident that they could not be successive (36). Furthermore it was seen that some of

36. Lowie, R.H., 1937, p. 78.

the groups which Morgan considered in transition from matrilineal customs to patrilineal customs and others with matrilineal customs, exhibited in many aspects a notable superiority relative to those who had patrilineal customs (and towards which the former would be evolving); which was inexplicable in its systematic appearance, if one accepted the succession from matrilineal clans to patrilineal as a requisite step of general evolution (37).

37. Krause, R., 1932, p. 196; McIver, 1937, p. 486; Kirchhoff, P., 1944, pp. 8, 9.

With respect to the modifications to Morgan's ideas about the types of clans, there is a very complex situation. For the reasons given, the majority of the investigators connected intimately with ethnography among tribes of primitive culture abandoned Morgan's ideas almost in their entirety, and accepted explicitly only his systematization of kinship terminology. Nevertheless, they are possibly under the /p. 16/ influence of Morgan, in accepting the distinction between a type of society based on kinship through common descent and another based on ownership of land and territorial distribution. And above all it is certain that they are under the influence of Morgan in accepting, in general terms, that the only organisms possible with a base in kinship through common descent must be unilateral, an idea which is very common among anthropologists (38), although even

38. Goldenweisser, 1937, p. 304; Lowie, R. H., 1934, p. 254; Kroeber, A.L., 1923, pp. 357, 358; White, L., 1940, p. 29; etc.

before Morgan's work one spoke of endogamous groups (see footnote 23 of this chapter) which had many similarities with clans and which appear to be based on kinship but are not exogamous. Nevertheless,

114 in this respect there is a study which makes a contribution of great importance to the ideas of Morgan and which can be accepted without abandoning an evolutionary stand and accepting that the bases of social organization are sexual production and economic production in the various stages of history. This is the discovery of P. Kirchhoff that there have been no strictly endogamous groups as these authors thought (39), but that on the other hand there indeed are groups based

39. Besides the authors cited in footnote 23, Watterman (1917, p. 273) thinks of the possibility of the Tenochca calpulli's being an endogamous clan, without this signifying a very special structure; and Linton (1943, pp. 238, 239) speaks also of exogamous and endogamous clans, the latter with interest in property and privilege.

on kinship through common descent, which, contrariwise to what Morgan thought, are neither unilateral nor exogamous, but are ambilateral and have an endogamous tendency (40). The clan, accord-

40. Kirchhoff, P., 1944, p. 6, 8, ff.

ing to these ideas is essentially an organism based on kinship through common descent, and not on unilaterality and exogamy. The clan can be defined thus as: (1) a group of persons, (2) organized in a permanent form, (3) to which one belongs through real or supposed descent and exceptionally through adoption, (4) which regulates marriage relationships and—the author would add—(5) which determines other social relationships wherever present. In accord with point (3) of this definition one can classify clans into two types: unilateral, if the members of the group trace their kinship by common descent only through the father (patrilineal) or only through the mother (matrilineal); and ambilateral if the members of the group trace the closeness of their kinship to their antecedents through individuals of either sex. With point (4) of the definition of a clan, clans can be classified as exogamous, if the prohibition of contracting marriage among themselves exists for the members of the clan, and /p. 17/ non-exogamous or with an endogamous tendency if there is the tendency to contract marriages within the same clan. These latter could be called endogamous if they evinced a strict endogamy such as the exogamy of the exogamous type clans—but the presence only of an

114 endogamous tendency has made the author of this classification (Kirchhoff, P.) prefer this denomination. It has been found that the clans called unilateral in general are exogamous, and that in turn, the ambilateral clans are non-exogamous, so that the terms can be used almost interchangeably. Moreover, exogamous clans occur in fairly equalitarian societies, like that of the Iroquois, while clans with an endogamous tendency present a marked social stratification, which stems from the formative principle of a clan of this type; the proximity of each member of the clan to the common ancestor, which results in a gamut of ranks within each clan, and even within the context of the tribe where the situation is reproduced. Then again Kirchhoff gives the name of clans also to non-exogamous and ambilateral groups—although the term does not have this generalized use—for very possibly the groups which gave the name of clan to social organisms based on kinship through common descent—as also those which are called sibs or Sippe—were, paradoxically, ambilateral and had an endogamous tendency. In accord with point (5) of the definition of clan, we could say only that if the groups of relatives through common descent are of importance in a community, we should speak of clans, and if not, then of their remains, of their vestiges, etc.

Also with respect to the characteristics which social strata show there have been some modifications of importance, which do not contradict the basic position of Morgan and Engels about the existence of social evolution and about the consanguineal or economic bases of social organization. They are additions which were not taken into account upon undertaking other studies about the social organization of the Tenochcas. Principally they consist of the delimitation of three phenomena: social class, rank [estamento] and caste. In some societies with a certain social evolution, ranks [estamentos hereafter "ranks". Translator.] are present, which are social strata composed of persons of a community with a similar social and economic position who are not related to each other, but who belong to their stratum through inheritance, and because of which these societies show little interrank [interestamental] mobility (41). In other very advanced

41. Mombert, P., 1944.

societies the social strata are veritable social classes: oppositional

114 strata of a community whose social role is determined by /p. 18/ the possession of basically different, but complementary means of production, such as land, tools or simply personal working capacity (42).

42. Marx, K., 1909, p. 1034.

and in which there is great interclass mobility (43). There are other

43. Mombert, P., 1944.

121 societies which evince castes. As we lack a definition of caste in terms of kinship and economy (since they are at times considered like clans but tentatively endogamous (44), it is proposed here, also

44. Forde, D., 1934, p. 273; Kroeber, A.L., 1944.

tentatively, to put forward such a definition; a caste being (1) a subdivision of a society, (2) with a strong endogamous tendency (3) to which one belongs by birth, (4) which automatically determines the rank of all the members of the society, and (5) which determines every individual's role in the social division of labor (45).

45. This is a definition tentatively arrived at through conversations with Dr. P. Kirchhoff.

In this work it has been the author's intention only to elucidate whether the social organization of the Tenochcas was rooted in phenomena of kinship through common descent, in light of earlier theoretical attainments, in order to attempt to explain its function and its place within the undeniable social evolution of humanity. Outside of this work has remained the discussion of social relations rising directly from economic production, as are commerce (46), slavery (47), and

46. In this respect there is a most interesting work of Acosta Saignes, The Pochtecas [Los Pocheteca], (1945), and his thesis on the same subject.

47. See the work of Bosch, Carbs: Prehispanic Slavery among the Aztecs [La Esclavitud Prehispánica entre los Aztecas] (1945).

121 the organization of the empire, based fundamentally on the tribute of groups not related to the dominators. These are very extensive parts of the social organization of the Tenochcas, and very important; but they can be left aside in treating our problem because they can be considered surely as forms derived from a fundamental structure. Nor is the attempt made in this work to describe all the functioning of the Tenochca society, nor to discuss all the positions which have been adopted with respect to various particular aspects of their social organization: these are so many and so intricate that the discussion would constitute many works such as the present; only a few have been dealt with, those which appeared to me relevant to the discussion of the central theme. Thus this work is limited to elucidating if there were clans among the Tenochcas and what were the characteristics of the social classes. In Part I is an exposition of the data which have permitted certain investigators to think /p. 19/ that the Tenochcas had social classes. In Part II an attempt is made to demonstrate that in Tenochca society there existed an organism based on kinship through common descent, an ambilateral clan, by nature clearly stratified: the calpulli; and that the phenomena which might lead us to think that the society of the Tenochcas had classes are explained by the existence of groups of this type.

127 The sources consulted to obtain data which would serve as the basis for my conclusions are practically the same as those utilized by Bandelier and by Moreno, M., to which are added a few more items furnished later to investigators. The sources consulted naturally are very many more than the sources used and cited, for actually there is an enormous lack of data with respect to the problems which I treat in this work. Data from other regions had to be utilized (Tlaxcalla, Texcoco, for example) in order to complement certain information, and it was necessary to utilize data from very much later periods than the one whose reconstruction is attempted in this work; but this was impossible to avoid. In order to standardize the criterion regarding the validity of information, I regarded the documents immediately after the conquest of Mexico as describing the situation with some errors: (1) The limitations of inquiry and information, stemming from the fact that neither the chroniclers nor the informants had special training; (2) the stress given certain subjects by the way the informants or the recorders saw them, according to their interests; (3) the difficulty that the Spanish had in understanding a society so different from their own in some respects and so similar in others; (4) the difficulty the informants had in analyzing their own society. The

127 majority of the data which could not be considered as a result of Spanish influence were taken as remains of situations from before the Spanish conquest. In every case the principal citerion of accuracy was the congruity presented by the data themselves; particularly in the sifting of data in works written long after the conquest or by authors who did not come to Mexico in this period (Acosta, Torquemada, Clavijero, Gómara, etc.) but who had at hand information and documents which we now lack, or who saw remains atill little modified of the ancient social organization of Tenochtitlan.

The contorted form reflected by some arguments derives principally from the necessity of taking advantage of the few facts about the subject, which are not always specific or categorized, but which refer to secondary or derived cultural traits; and which suggest a prior basic situation necessary to their appearance.

/p. 21/ THE IMPORTANCE OF THE CALPULLI

/p. 23/ Chapter 2

SOCIAL STRATIFICATION

565 463 In the sources for the history of Mexico we find data which beyond doubt demonstrate the existence of social stratification among the Tenochcas and which have let a few authors think that the Tenochcas had social classes. These data are very diverse in nature and very abundant, but here only the more significant will be presented: the division between manual laborers and directors, the paying of tribute, the differentiation in the living standard, the relation between the strata and the calpullis, and the inheritance of property to a determined stratum.

With respect to the division of labor we find a great difference of activities between two types of people: those who undertook manual labor and those who undertook essentially directive tasks. We are told that the macehuales were the common people and laborers (1) and that

1. Zurita, p. 94.

565
463

they worked at their crafts (2), that is, they were manual laborers.

2. Acosta, José de, p. 425. "crafts" [oficios] being considered a more or less specialized manual artisan activity.

On the other hand the pillis and the tecuhtlis had as occupations "to serve in war and in public office as governors and ministers of justice... squires... messengers... to oversee the sowing of seed or other things which were done in common or for their festivities and the service of the ruler" (3) and "to watch over the lands of the

3. Zurita, p. 89.

calpulli and defend them, to keep each marked in its proper fashion, and see to the boundaries between each, and where and with whose they bordered and who worked them, and who owned which and which were vacant... and who and when and to whom they were given" (4) and to see to it "that they be not entered upon" (5), and

4. Zurita, p. 90.

5. Zurita, p. 88.

they were "careful to protect the men of the calpulli and speak for them before the governors" (6); that is, that the pillis undertook tasks

6. Zurita, p. 90.

essentially directive or coordinative (7). With these data we can

7. With reference to Tlaxcalla, Muñoz Camargo tells us (p. 103) that the tecuhtlis /p. 24/ and pillis "are thought of as men of quality even when very poor who never carry out mechanical tasks or base or servile undertakings. They never allow themselves to carry a burden or dig with hoes or plows, saying that they are nobles [hidalgos] and that they will not apply themselves to these vile and base things, but rather

565
463

are they to serve in wars and on the frontiers." This was surely what happened in Tenochtitlan although unfortunately we have no such clear affirmation for this place.

/p. 24/ assert that among the Tenochcas there was present a marked differentiation with respect to labor: there were people who undertook manual labor and people dedicated to directive activities. These latter, also appear in our data strongly related to the calpulli.

565
463
651

The difference in the social division of labor which we have seen in the last paragraph had possibly as its principal manifestation the position with respect to the paying of tribute: some were tributaries and some received tribute. It is told us in this regard that "the poor macehuales worked all day for their tribute and in order to give food to them (to the lords) to eat; because in a village of a thousand people there are a chief /cacique/ and a hundred lords / principales/ among whom the village is divided into wards... and these eat and drink and loaf at the expense of the poor workers (or macehuales, as we have seen) who support it all; and this is a very old custom in all the provinces of the land" (8), (that is, also in Tenochtitlan and not through

8. López Gerónimo, 11, p. 151. Although the assertion of a confirmed pro-slavist, it is useful and synthesizes many isolated facts.

Spanish influence). From our data we conclude first, that the lords were approximately 10 percent of the population and moreover, that there was a division between people receiving tribute—those undertaking directive work—and people tributary—those who undertook manual work—, and there comes to light again the relationship between this social stratification and the division of land, only that now with respect to the paying of tribute, the lords receiving tribute were those in charge of the town wards. Everything is confirmed in other sources: we are told that the macehuales "worked a plot of land for their lord or head (of the calpulli) for his sustenance and gave him service according to the people there were in the village" (9). Another

9. Zurita, p. 142.

author tells us that the elders used to say "that the common people

565 contributed to their natural and legitimate masters in making their
463 houses and cultivating their plots... and they did the same for the
651 lords" (10). Taking into account all that has been said above it is

10. Anunciación, p. 237.

clear that the payment of tribute existed within the same Tenochca group and reflected a difference between two kinds of people, and that there existed a relationship between this stratification and the ward divisions. It also appears from our data that, besides the tribute to the lords, there was a tribute to the rulers [a los "señores"], to the chiefs [a los "caciques"], which is probably to say, to the chiefs of the whole group, not just to the lesser ward lords.

565 It is certain that as a result of the role in the division of labor and
511 of the difference between being tributary and tribute-receiving, great differences in the standard of living in the population came about in Tenochtitlan. The macehuales had "neither furniture, nor clothing other than what they wear on their persons, which is very poor, and one or two stones for grinding maize, and a few pots for cooking and a mat on which they sleep... and they eat little... the common
[651] people and the plebians are so tyrannized by their Indian lords that most of them have their rations taxed " (11). On the other hand we

11. Oviedo, III, p. 535. The weakness of the author cited vanishes by reason of its congruence with other authorities.

are told that the lords and rulers were always going to banquets and weddings (12) and that the princes slept in beds (13) and that the

12. López Gerónimo, II, p. 151.

13. Martín de Anglería, P., p. 470.

[625] rulers had and gambled with "precious stones and jewels and gold and featherwork, slaves, blankets of all sorts, and arms and trappings of war" (14). We have all seen, likewise, the diversity which the

14. Pomar, p. 27. Although the fact refers to Texcoco, it coincides with what is known in less

565
511

categorical assertions such as that of the Codex Alcobiz (Laws which the Indians had) [Leyes que tenian los Indios].

codices show between the clothes and gear of the macehuales those of and the lords and rulers in illustrations of Sahagún, Mendoza, etc. All of these are facts which oblige us to think that there were great differences of richness and well-being within the population of Mexico-Tenochtitlan and that these differences existed between the macehuales and pillis.

565
595

Another aspect which showed the differences between segments of the population was sexual life: "it is said that commoners have only one wife; but the lords can have concubines at their wish" (15), and

15. Mendieta, Eclesiastical History [Historia Eclestiástica], p. 297.

when they married "the noble women brought with them other maid-servants (and with all these women the men had)... much profit for they made them weave and make blankets, and perform other services of this sort" (16).

16. Motolinía, History [Historia], p. 164.

These data show us not only the well-being of the polygamous lords implicit in having a multitude of wives, but also the economic well-being derived from this polygyny, which was beyond the reach of the macehuales.

565
413

However, it seems that this stratification also included groups of people dedicated to occupations other than agriculture since we are told that the merchants also had lords who went about with the heads of the calpullis (17), which makes us think that not all the merchants

17. Zurita, p. 143.

were /p. 26/ lords, and that therefore there obtained among them also the stratification of which we have been speaking. Complementing and clarifying the situation, we know that the merchants and the artisans, although they cultivated their land, did not give tribute by working the fields but in work of their particular occupation

565 463 (18) such as masons, carpenters, feather-workers and metal-workers

18. Zurita, p. 142.

(19). Although it is not made clear to us whether this tribute of

19. Oviedo, III, p. 535.

"merchants and artisans" was in relation to the rulers of the whole Tenochca group or only to the lords of the corresponding calpulli, it is very possible that in this tributation there occurred the same thing which happened to the workers which we have seen: they paid both. All this makes us think that the stratification which existed among the Tenochcas was not in layers of workers, artisans, merchants, and chiefs, but rather between the chiefs and the governed, be they laborers, artisans, or merchants. This conception is reinforced by our being told that the pochteca tlatoque (a term translated as the lords of the pochteca, that is, merchants) did not go on the trips of the merchants, but that they entrusted their "merchandise" to them that they sell it for them and later they divided the profit (20); which is

20. Sahagún, I., p. 351.

to say that within the group, differences of occupation were present which resulted in a stratification between people who worked as merchants and people who, because of another class of work (directive, as chiefs, as "lords") received part of the benefits obtained through "marketing." It is told of the artisans of Texcoco that the nobles also learned crafts, but only as a distraction (21). Assuredly a similar

21. Pomar, p. 38.

situation existed in Tenochtitlan and almost certainly corresponded to the division between pillis and macehuales, in groups of artisans.

565 428 It is advisable to make further clarifications with respect to the division between tributary macehuales and tribute-exacting pillis. One source tells us that although the lords had many women, they considered only one of them the most important and the children she bore [were considered] as inheritors of their position (22). Although the

565
428

22. Pomar, p. 25. Actually Pomar gives contradictory information: "they always leave as heir to their estate the son of the legitimate wife" and "to the most virtuous, although he be the youngest... (or) of the other women." Nevertheless, paternal inheritance remains as the fact common to all.

information does not refer to Tenochtitlan, certainly it was valid also for the lords of that place, and Zurita does confirm it in part (23).

23. Zurita, p. 90.

Another author tells us that in cases of rebellion by the lords, they were removed and the rulers placed a near relative, such as a brother, in his place, but not his son (24). It resulted from this that the legal

24. Mendieta, History [Historia], p. 154.

heir of the calpulli chief was in these cases a relative of the predecessor, although not necessarily his son: possibly it can be said that the relatives of the chief of the calpulli were lords, that they could potentially become tribute-exactors like the chiefs if they ever achieved this category, and that not all did achieve it. However, the wives and children of the calpulli chief certainly had the benefit of the tribute paid to him (25).

25. Muñoz Camargo, with respect to Tlaxcalla tells us that "the family estates [mayorazgos] entailed by them (the pillis), are never divided, and they (this must refer to the macehuales) were obliged only to support all the relatives and brothers of that family" (p. 8).

565
651

We are told that there were in the wards other persons of authority besides the chief, such as the telpochtlato (26) or director of the school

26. Torquemada, II, p. 220.

of each ward, who certainly lived from tribute. We are told on many occasions of tribute for the temples (see page 42) thus making some

565 651 priests tribute receivers. But there are still some other very important complementary data: on one hand that "painters, whom they called tlaculoca (sic: tlácuiloque), were exempted from contributions and from some services... also the singers... and the players of instruments... neither did the instructors contribute..." (27). On the other

27. Fuenleal, p. 249.

hand we know that all who contributed were called macehuales (28)

28. Fuenleal, p. 249.

and that the relatives of rulers and some lords did not contribute (29),

29. Oviedo, III, p. 535.

from which we can infer that the musicians, singers, instructors, etc. who did not contribute, were people from among the rulers and lords, and not from the macehuales; although such a conclusion is not absolutely necessary or compelling.

There are, nevertheless, within the scheme of the tributary [729] macehuales and the tribute-exacting lords some exceptions: those who distinguished themselves in war were exempted from taxation (30),

30. Fuenleal, p. 249.

which obliges us to think that they were macehuales who enjoyed a privilege which the other macehuales did not have. Certainly these macehuales were the ones who were made nobles by favor (31) and

31. Sahagún, II, p. 308.

about whom there are no data to indicate that they received tribute, that is that they were "nobles," lords by inheritance, nor could they have "tenants" ["terrasgueros"] (32), that is, could live from tribute,

32. Torquemada, II, p. 546.

and /p. 28/ who for that reason, like the common macehuales, personally worked their lands; their distinctive character was simply that

565 of not contributing. On the other hand we have a counterpart to these
651 macehuales who did not contribute: there were lords who being caught
[681] in a crime were punished by "being condemned to death" or to exile or to being sheared, or they were made macehuales (33), that is, they

33. Sahagún, II, p. 308.

were pillis from whom was taken the right to exact tribute and on whom was imposed the obligation of contributing. We saw also earlier that not all lords were exempt from contribution. We can think, nevertheless, that these cases must have been an exception, and that in general the macehuales were tributary and the pillis tribute-exacting.

We would thus have in Tenochtitlan a whole gamut of people in different situations with respect to tributation: people receiving tribute from all tribute-paying persons, people receiving tribute from the members of their calpulli, people neither tributary nor tribute-receiving, and people not tribute-receiving but tributary. According to the above data there is no doubt that there was present a marked differentiation among these levels of the population, at least. If we were to take these data only into account, of course we would have to think that the Tenochca society had classes; but if we analyze other data at our disposal, we will see the great importance which inheritance had in the belonging to each one of these levels (except that composed of the valiant in battle), which removes the class-
565 like character from them. In the first place we are told that upon
852 the birth of children "they were washed by the priests and after being washed they [the priests] would place in the child's right hand a tiny sword and in the left, a little shield. The children of the common people were given the insignia of their occupation, and all this beneath some idol" (34). From this it is infered that the people were

34. Acosta, José de, p. 425.

differentiated by their rank from birth: some were born destined to serve in war and on the frontiers (those with the little shields, who were not commoners) and were not to apply themselves to base work, and others were born destined to be laborers and to have humble and
565 vile occupations. Now this situation was hereditary since the pillis were called "lords" (35) and were the sons and grandsons and

565

35. Zurita, p. 91.

great-grandsons of lords (36); that is to say, that the differentiation

36. Zurita, p. 90.

which was made between these two types of people from birth was hereditary. And as we are actually told of lords from the epoch of the Tenochca migration (37), we may believe that they were very

37. Geneology and Lineage [Genealogía y Linaje], p. 248.

ancient ranks. The position of the macehuales was certainly also inseparable and socially complementary to the position of lord /p. 29/: it is mentioned also during the migration (38), and could

38. Tezozomoc, Mexicayotl, p. 147.

be considered as a mental reflection of the situation, the legend which tells that the macehuales all descend from the first macehuales, the ancient gods Oxomoco and Cipactonal (39) connected intimately

39. History of the Mexicans from their Pictures [Historia de los mexicanos por sus pinturas], p. 210.

with the tasks of cultivation of maize, proper to their rank. With respect to merchants we also have [reference to] the existence of lords since the epoch of Cuacuauhpitzahuac in Tlatelolco (40) which

40. Sahagún, III, p. 341.

would confirm their hereditary stratification. As for the artisans, there were founders of the crafts whose successors adored them as gods (41), and who certainly were the corresponding pilli forefathers.

41. Sahagún, I, p. 46. Sahagún, II, p. 387; Torquemada, II, p. 60.

565 These levels did not have an absolute castelike rigidity. Besides what we have already seen regarding the fact that some macehuales were in a special position by reason of their exploits in life and not by birth, and that there were lords who lost their privileged situation of tribute receiving, we know that it was customary for pillis and
582 macehuales (42) to intermarry, the children of which marriages must

42. Motolinía, Memorials [Memoriales], p. 123; Zumárraga, p. 66, etc.

have had a different position from those children of marriages between pillis or of pure macehuales. There must have been present a whole series of people, from the most noble to the most plebian, we could say (using the terms noble and plebian in our sense), giving rise to a real pyramid of levels within the Tenochca group. Thus we see that the differentiation of rank had a corresponding economic differentiation; but that this latter had a limitation: not all the pillis could be recipients of tribute, but only the functionaries of the tribe or of the calpulli, and on the other hand, not all the macehuales payed tribute, those valiant in war being excepted. In their recognition of this stratification Caso, Spinden (43), Toscano, Moreno, White, etc. are

43. Spinden, H.J., 1943, p. 210.

right, but only in part, since these strata were not social classes; they could be considered ranks because of the little mobility of those belonging to them, generally by birth (an affirmation which with respect to the uppermost level can be definitive); but—and this is the fundamental thing—it can be shown that the existance of these strata was hinged to that of ambilateral stratified clans, the calpullis, and that it was therefore not a fundamental structure but a derived one, as will be seen in the second part of this work.

/p. 31/

Chapter 3

TERRITORIAL DIVISION

631 Another of the aspects of the social organization of Tenochtitlan which has led us to think that it was not based on kinship through

631 common descent is the existence of what the Spanish called "barrios" /henceforth "wards"/, or territorial divisions of Tenochtitlan. This chapter attempts to describe all the elements which were related to the calpullis in the whole of the territorial organization, and not really to make a reconstruction of a topographical type (1). If we

1. Topographically, the work of Toussalent Fernández and Gómez de Orozco on Tenochtitlan is very complete. But it does not touch upon the problem which interests us here (Plans of Mexico City: the 16th and 17th Centuries /Planos de la Ciudad de México. Siglos XVI y XVII/ Mexico, 1938).

analyze the data which we find relevant to this in the sources, we see that it very amply clarifies for us the situation extant around the time of the arrival of the Spanish, and which we can synthesize in the following form: the Altepetl Tenochtitlan was formed of four Campan ("large wards"), each of these by various Calpulli ("wards"), each formed by various Chinampa (family plots).

This table results from examining the most significant data in the sources refering to the Territorial division of Tenochtitlan. We do not know what the situation was before the arrival and establishment of the Tenochcas on the island, but we are told that upon establishing themselves on Tenochtitlan the leaders split up among four wards "each one with his relatives and associates, where each party built at will" (2), according to which it appears that the members of each

2. Ramirez Codex /Códice Ramírez/, p. 42.

one of the four aforesaid wards were more closely associated with each other than with the other members of the Tenochca group. Also, the Nahuatl text—which clarifies the Spanish text—which describes the same happening, gives the term /p. 32/ calpulli (Nahuatl: "large house") as corresponding to "plots" while it uses nauhcampan (Nahuatl: "four regions") to designate the four wards (3). According to this it

3. Tezozomoc, Mexicayotl, p. 37.

631 appears that upon the Tenochcas' establishing themselves on the island they divided it into four parts (campan) in each one of which only calpullis allied to each other were established.

This came about at the time of settling in Tenochtitlan. What was the situation by the time of the arrival of the Spanish? On one hand the calpullis still occupied the lands that were "divided up when they came to the land and each family or band settled in the lots which were assigned to them and their descendants" (4). That is, by

4. Zurita, p. 25.

the time of the arrival of the Spanish the calpullis still had the same distribution as when they were established. What is more, well into Colonial times, Mexico City was divided into four large wards, each one containing other smaller ones (5). Surely the large wards were

5. Torquemada, I, p. 294.

remains of the groups of allied calpullis (the campans) and the smaller wards must have been remains of the calpullis, both affected by the conquest, but whose importance must have been very strong since even then, as before, these wards (large and small) had leaders [mandones] "in common as well as in particular" (6).

6. Torquemada, I, p. 294.

Let us turn now to the matter of the divisions of the calpullis: an author tells us that what was called calpulli before the conquest, afterwards was called tlaxilacalli (7). Although this may have

7. The datum possibly is Motolinía's, but unfortunately I have lost the exact reference, and although I have tried to find the datum, I have not succeeded.

happened in a few cases, it appears that for Tenochtitlan the matter was not so simple. Above all we have the information that in the Colonial period, besides the division of Tenochtitlan in four large wards, and of these into calpullis, each calpulli "was divided into streets which they called tlaxilacallis" [sic] (8). Thus it is that

9:Monzon--29 E-4 (no date) 1949 NU7 Aztec NU7

8. Torquemada, II, p. 545.

631 tlaxilacallis and calpullis were not the same, but that tlaxilacalli was at least a subdivision of the territory of the calpullis, if it is not that they were aggregates based on kinship through descent as some documents suggest which tell us of married couples founding tlaxilacallis in places near Mexico (9), and the affirmation that the

9. Cuajimalpa Codex [Códice Cuajimalpa]

tlaxilacallis of Tenochtitlan defended with great diligence the integrity of their lands (10), as if they belonged to closed groups of rela-

10. Torquemada, II, p. 545.

tives.

/p. 33/ It could be thought that about the time of the arrival of the Spanish the tlaxilacallis were families or family lots of the calpulli; but against this possibility we have forceful arguments: they are called "wards" and "streets"; besides it is certain that there happened in Mexico what happened in other nearby places, in which each calpulli was subdivided into two or three tlaxilacallis (11), a

11. Chimalpain, Ms. Silvia Rendón. 6a. Relation [Relación], p. 231.

number of families which appears very small to form a calpulli. And in the "Maguey Paper Plan" [Plano de Papel de Maguey] appear the "streets" mentioned by Torquemada—the tlaxilacallis—separated from one another by water and earth, and each one of them has subdivisions which certainly were the family plots. The tlaxilacallis thus appear larger than the family or the family territory, and smaller than a calpulli or the territory of the calpulli.

On the other hand, we fortunately have many data which clarify the concrete picture of the tlaxilacallis in Tenochtitlan: the Description of the Archbishopric of Mexico [Descripción del Arzobispado de México] tells us that the tlaxilacallis were like "small wards" (12) and that in St. Pablo—corresponding to the

12. Description of the Archbishopric [Descripción del Arzobispado], p. 278.

631 Teopan campan (13) or Teopan Xuchititlan (14)—there were twelve

13. Vetancourt, III, p. 124.

14. Chimalpain, Diary /Diario/, p. 275.

tlaxilacallis and five small properties besides Iztacalco which used to be part of St. Pablo only occasionally. Examining the list of "wards" of the Ms. 13994 (15), eleven "wards" are obtained (see the

15. In Royal Decrees and Other Papers regarding the Indies /Cédulas Reales y otros papeles tocantes a las Indias/.

Table of tlaxilacallis): certainly these "wards" of the said manuscript are tlaxilacallis. This explains to us much of the territorial affairs of Tenochtitlan: one of the names of the tlaxilacallis which appear in the aforesaid manuscript is the same as one from the list of wards in the table of correspondence between wards and the social division of work (Tzapotlan, that of the vendors of uxitl of St. Juan). Another of the tlaxilacalli names, Huitznahuatonco (of St. Pablo), certainly is not the Huitznahuac of the lords and fishermen mentioned by Sahagun (see p. 50), since the tlaxilacalli Tecpantitlan (which means 'place of the palace') must have been the one which corresponded to the lords of St. Juan. It well could be that the tlaxilacalli Tecpantitlan had another name, non-descriptive, and that this is one of the three which appear in the list: Yopico, which is the only one exclusively associated with the lords; another could have been that of a calpulli to which the tlaxilacalli Tecpancaltitlan belonged. Unfortunately, with the data at hand, we are unable to make other correlations between tlaxilacallis and calpullis. Nevertheless we can shed a good deal of light: there was a single tlaxilacalli in which was the women's temple (Cihuateocaltitlan), in the Moyotla campen (St. Juan). But there were four tlaxilacallis called Teocaltitlan, one in each campan which surely corresponded to the locations /p. 34/ of the temples, the Teocallis. Then again, all this causes us to catch a glimpse of a difference in the category of the tlaxilacallis within the calpullis and within all Tenochtitlan as a whole. Although the data refer to an already post-Hispanic epoch, undoubtedly the situation which they suggest has many marked aspects of the pre-Hispanic.

63/ There are other terms than campan, calpulli, and tlaxilacalli which we should clear up, and whose importance in understanding the situation of the Tenochcas is fundamental: altepetl was translated by town and huey altepetl for Provincial Capital. Huey altepetl means large altepetl and was applied to such places as Tenochtitlan with many calpullis and with political hegemony over other groups; it could well be that altepetl was applied to places without hegemony over other groups. One author tells us that altepetlalli (lands of the altepetl) and calpullalli (lands of the calpulli) were the same (16).

16. Ixtlilxóchitl, II, p. 170.

In support of this Clavigero tells us that the lands of the altepetlalli were divided in as many parts as there were wards (17), thus the re-

17. Clavigero, I, p. 355.

lationship between altepetlalli and altepetl, and between calpullalli and calpulli is explained: the altepetl was made up of calpullis, and the whole of the lands of the calpullis constituted the land of the town (18).

18. There are other terms whose definition would be very useful; but I have no information sufficient to do it: tlayacapan, which Molina translates in his dictionary as ward and as collation; calnacazco, which he translates as district [cantón]; tepepa, which he translates as city, as he does altepetl; and chinampa, which he translates as ward, although its present usage in Mexico is closer in meaning to family plot.

It appears that the discussed terms were vague in meaning under certain conditions, which allows one to believe that through a natural process of growth, theoretically at least, the family territory could come to be that of a tlaxilacalli, that of a calpulli, (and, though perhaps not, that of an altepetl); the calpulli, "large house" nevertheless remaining as the basic unit.

Thus we find the territorial organization of Tenochtitlan as we presented it at the beginning of this chapter: altepetl, campan, calpulli, tlaxilacalli, and chinampa as subdivisions, in descending

631 order, of the territory of the group. This subdivision could have been a simply territorial subdivision: in wards; but it appears more likely to have some relationship with kinship phenomena, through the mentioning of tlaxilacallis as founded by married couples and campan formed by allied calpullis. These relationships will be absolutely certain if it is demonstrated that the calpulli was a clan, and there certainly are arguments which could lead one to believe that among the Tenochcas the calpullis were clans, as will be seen in the Second Part.

/p. 35/ TABLE OF THE TLAXILACALLIS OF TENOCHTITLAN IN 1637 (1)

631
103

1. There are mentioned in the list the tlaxilacallis which appear in the report of the year of 1637 of Ms. 13994, and in the notes are recorded the differences with respect to the report of the previous year—which is less complete—and some mention of various tlaxilacallis made by Chimalpain in his Diary (which information was sent me by Mr. R. H. Barlow). Naturally the names of the calpullis do not generally coincide with those of tlaxilacallis. [Further footnotes in this table are not interlineated, but appear at the end of the section. —translator.]

The large ward of St. Juan (2) or Moyotla.	The large ward of St. Pablo or Zoquiapan (3).	The large ward of St. Sebastián or Atzacoalco.	The large ward of St. María or Cuepopan.

15. Also in Chimalpain, p. 238.

Chapter 4

OWNERSHIP OF LAND

423 Let us analyze another of the aspects of the social organization of the Tenochcas, which might lead one to think that it did not have its origin in kinship: viz., ownership of land. In the sources we find that for the most part it was related to the existence of the calpullis.

In the Spanish sources of the beginning of the conquest three really very different criteria are always taken, almost interchangeably, to refer to the ownership of land: one is the working of it personally; another is the receiving of tribute from the one who works it, and another is the receipt of rent. This last is not going to be discussed at length here; but with reference to all these criteria we can shed a little light: we are told that the Indians in their plans indicated three types of land: those of the calpullis, yellow; flesh-colored for those of the lords; and a bright red for those of the king's household (1). The significance which these indications had is what is going

1. Torquemada, II, p. 546.

to occupy us principally.

Let us establish first of all that the lands of Tenochtitlan had been originally occupied only by members of the same Tenochca group; but that there appear to be indications of later immigrations from other regions, as from Xochimilco (2), although generally we lack

2. Vetancourt, III, p. 124; Torquemada, II, p. 60.

complete data in this respect. We can suppose, however, that in the event of there having been immigrations, these were isolated with consent of the group in general since we are told, without par-
[685] ticularizing, that whoever pulled up and took away the landmarks and boundaries of the villages was subject to the death penalty (3);

3. Román, I, p. 285.

in the case of Tenochtitlan, through being in a very special situation of isolation, it was very unlikely that an invasion could occur.

423 We have seen already that the calpullis, since their establishment in Tenochtitlan, were concentrated and limited, and that the lands which they occupied about the time of the arrival of the Spanish, were the same which they had occupied since their /p. 38/ establishment in Tenochtitlan. This, although the original division was in part determined by the number of people present in each one of the calpullis, had certainly brought about that there was not an equal division at the time of the arrival of the Spanish. And in fact it is affirmed that not all the calpullis had the same number of people (4), which is quite understandable if the development of the calpullis

4. Zurita, p. 87.

had been more or less free. Certainly not having the same number of people, some calpullis had more land than others (5), and we even

5. Zurita, p. 87.

know of some that had "unoccupied land" (6) (fallow). This in the

6. Zurita, p. 88.

beginning may not have been of much importance, if the land was divided in accord with the people of each calpulli; but it indeed must have brought about great difficulties when some developed more than others. It appears, furthermore, that the land which the Tenochcas originally occupied was little by little increased by means of the chinampas (7), artificial land, although this is a method which

7. Clavigero, I, p. 379.

had many limitations. The result is at any rate that the lands of Tenochtitlan were divided by calpulli since their establishment in Tenochtitlan, and in spite of the differences in number of people or in amount of land, one calpulli could not take lands from another calpulli (8). This strongly suggests that the calpulli were closed

8. Torquemada, II, p. 545; Zurita, p. 88.

land-owning groups rather than simple wards.

423 Let us now see how the lands were distributed within the calpulli itself: the lands of the calpulli were occupied by the macehuales only in part and the rest they worked in order to pay their tribute (9).

9. Ixtlilxóchitl, II, p. 170.

We can complement this piece of information with another which was that all held land privately or in common in their calpulli (10).

10. Zurita, p. 104.

Thus it appears that the lands of the calpulli were divided first into land cultivated for tribute and land cultivated for the subsistence of the actual workers, and in the second place, it appears that these lands cultivated for the subsistence of the actual laborers were divided "individually" or "in common."

The lands divided "individually" were certainly the lands parcelled out and assigned to families which included brothers and nephews of the head of /p. 39/ the family (11). These parcels were

11. Gómara, II, p. 277; Cortés, 1538, p. 540.

inherited and could not be broken up (12) and the right to work them

12. Gómara, II, p. 277 and 309.

fell to the descendents of the same family (13) with the penalty of

13. Gómara II, p. 277.

death for whoever took or removed his land-marks and boundaries (14).

14. Laws Which the Indians Had [Leyes que tenían los indios], p. 208; Ixtlilxóchitl I, p. 238; Torquemada, II, p. 386.

The lands were given in general to members of the calpulli itself (15) and there must have been differences in the size of the

15. Zurita, p. 25 and 27.

423 lots, at least according to the possibility of working them (16) and

16. Zurita, p. 88. Cortés gives us extreme measurements of lots of 100 to 2000 of "certain measurements" (1538, p. 542), and Clavigero gives us a measure of from 3 to 8 toesas, that is approximately 48 square meters.

yet there were people who did not have land in their calpulli (17),

17. Zurita, p. 89.

perhaps because they had left them unused for two years and had had them confiscated (18). The result was that, of the members of each

18. Zurita, p. 89.

calpulli, some had more land than others, and possibly everybody could work more than the plot they actually had; that is to say that there was a relative scarcity of arable land; but it appears that the families were not the owners of their lots.

We are told that some left their calpullis fleeing from excessive taxation of for other reasons (19) perhaps leaving the calpullis of

19. Cortés, 1538, p. 541.

many people and little land for calpullis with less people and land available to work. In this respect it is explained to us that whoever left their calpullis lost the rights to the lands assigned them in their calpulli (20).

20. Zurita, p. 88.

It was possible to rent the lands of one calpulli to the members of other calpullis for the public and common needs of the calpulli (21), possibly for a limited time, "for a year or two or more" (22)

21. Zurita, p. 88.

22. Zurita, p. 116.

423 and apparently not "for life," that is, the members of one calpulli did not really pass to another calpulli. (In part this does not happen either in the calpullis studied by Redfield in 1920 (23), thus suggest-

23. Redfield, 1920, p. 288.

ing that the calpulli was a property-holding group rather than a ward). In any case we must assert that in general the majority of the people must have had land in their calpullis and that possibly the leaving for other calpullis was an exception. (We could also think that among the Tenochcas the same happened as among the Maoris, where it was possible /p. 40/ for a person from one group to pass to another, in which he was adopted.(24). Thus it appears that the

24. Goldenweisser, 1922, p. 382. Mishkin, N. 1937, p. 429.

calpulli was a true proprietary group, the use of the land being proof of its ownership. These were the lands pointed in yellow, their existence clearly recognized.

There was, besides the land given to the common macehuales of the calpulli of which we have just talked, a mode of distribution of the calpullis' lands which was of fundamental importance: the land
[124] given to those courageous in battle [henceforth "valiants"]. These lands were given by favor for heroic deeds in war (25). But they

25. Torquemada, II, p. 545, 546; Vetancourt, I, p. 273.

were lands, and this is the fundamental thing, used for sustenance and where one could not have tenants (26); that is, they were lands

26. Torquemada, H. [sic. 1] p. 545. Zurita (p. 116) tells us that the tenants pay rent "To the master of these," a statement which does not appear to refer to macehuales or even to the nobles, that is to say not contradicting the former affirmation of Torquemada.

which they worked and which yielded them fruits, but which did not

423 give them tribute as in the case of real lords (see page 27). Furthermore these lands were family parcels and not tlaxilacallis or calpullis since we are told that the members of the family inherited them and they reverted to the calpulli to which they were assigned in case there were no heir in order that the obligatory tribute be paid (27).

27. Torquemada, II, p. 546; Vetancourt, I, pp. 272, 372.

It has often been thought that these "valiants" were truly ennobled people and therefore tribute-receiving (28); but the data presented

28. Caso, Alfonso, 1946.

before, show that they were macehuales who did not pay tribute but who otherwise had lands which they worked personally like the other macehuales and unlike the lords. The problem is to find out whether they were on land of their own calpullis or onland of calpullis not their own. In the first case they would be forming a part of the general distribution of the land by calpullis; but they would differ as far as social position determined by the paying of tribute. In the second case—if the "valiants" were on lands of calpullis not their own—it is certain that they would be on land belonging to calpullis conquered in war, and thus, although they did indeed constitute a breach, we cannot suppose that it constituted a breach of importance in the distribution of the land by calpullis, since war had as a principal reason of being, the obtaining of tribute from the conquered, and they [the valiants] did not pay tribute. This surely limited the number of non-tributary "valiants." Thus we can affirm that this form of holding land was tied up in a certain degree to the existence of the calpullis and was not the fundamental one in Tenochtitlan.

/p. 41/ Let us go to another point: the pillallis. This term is translated as lands of the pillis, the lords of whom we have already spoken about. We have already seen that a portion of the lands of the calpulli was worked for tribute and another for the sustenance of the macehuales (see p. 38), and that the tribute given to the pillis was the working for them of a plot (see p. 24). Thus we are led to believe that the lands of the calpulli (calpullalli) had a portion for the sustenance of the actual pillis (pillalli) and that the rest was the land with which the macehuales sustained themselves. This would

423 be confirmed when we are told that except for the lands sold by lords to merchants, all were, or had been lands of the calpullis (29). The

29. "The lands which they possessed belonged to the town, were common, or belonged to the wards which they had parceled out, and some of the lords sold part of these lands to private individuals and those who bought them left them to their descendents. However, in the beginning they were lands of the villages which they call altepetlalli, or lands of the wards, which they called calpullalli" (Annunciation [Anunciación], p. 238).

possibility should be kept in mind, however, although it is almost impossible, that these lands were separated from the whole of the lands of their calpulli. They would be, in one or the other case, the flesh-colored lands, those of the lords.

Let us examine now the data on other lands, the so-called tecpantlalli; we find this term in the sources, which can be translated as lands of the tecpan. We have already seen that Tecpancaltitlan was one of the tlaxilacallis of Tenochtitlan (see p. 33) which leads us to believe that these lands belonged to this tlaxilacalli.
423 In the tecpantlalli lived the tecpanpouhque or tecpantlaca (30),
428

30. Torquemada, II, p. 546; Ixtlilxóchitl, II, p. 170.

terms which can be respectively translated as "those counted in the tecpan" and "the people of the Tecpan," that is, a determined group of people. They were lands and peoples of the ruler (31), and

31. Torquemada, II, p. 546.

on the land there lived "people who were very esteemed and close to the house of the king, and whom the common esteemed more" (32). All this leads us to believe that these lands were of a group to

32. Torquemada, II, p. 546.

423 which "the king" (viz. the tlatoani) belonged. These lands "passed
428 from fathers to sons... and if anyone died or went off to other parts, his house and his land remained , and by order of the king or of the ruler, the others of the district put another in his place, " and they could not sell them (33), and the tecpantlacas worked them personally

33. Torquemada, II, p. 546.

(34). These data indicate to us, first, that among them obtained

34. Ixtlilxóchitl, II, p. 170.

the same situation as obtained among the lands of the calpullis and tlaxilacallis: distribution in family parcels and inheritance of use, and that they had a certain unity with respect to a group which used them: its "faction" [*"parcialidad"*]. All this makes us think that the tecpantlalli were of a calpulli or of a tlaxilacalli, the calpulli or the tlaxilacalli to which the tlatoani belonged.

423 /p. 42/ We are not told only of the tecpantlalli, but also of the tecpillalli, which " ere almost like what they called pillalli" (35).

35. Ixtlilxóchitl, II, p. 170.

Tecpillalli is translated as lands of the pilli or of the pillis of the tecpan, which explains to us what sort of lands they were that received this name: the lands destined for the sustenance of the pillis of the tecpan—the nobles of the calpulli of the tlatoani—, lands which possibly formed a unit with the others of the tecpan, perhaps inlike manner to the lands of other calpullis divided between macehuales and pillis.

423 There were lands and cultivated plots for the temples (36). These

794 36. Román y Zamora, I, p. 120; Zurita, p. 176.

793

surely were of two types since on the one hand there was "a lot in each ward" (37), that is, they were certainly distributed by calpullis.

37. Ramirez Codex [*Códice Ramírez*], p. 79.

423 But on the other hand there were others which were not or appeared
794 not to be in the same condition, since in these the priests functioned
793 as mayordomos (38) and had tenants and neighbors who gave tribute

38. Clavigero, I, p. 281.

only to the temples (39). Perhaps this means that they were calpullis

39. Román, I, p. 120.

or tlaxilacallis whose lords were priests. Reinforcing this assertion is the fact that these people were differentiated from others and felt it to be an honor to be occupied in that employment (40), somewhat

40. Torquemada, II, p. 165.

similarly to what happened in the case of the tecpantlacas. What we can deduce from all the above, anyway, is that in order to speak of the lands of the Temples one takes as criterion the tribute and not the direct utilization of the land by the priests. Furthermore we can ascertain from our data that the calpulli was an organism basic to the existence of these lands in their particular distribution: each calpulli giving a part of its products, or entire calpullis dedicating themselves to giving tribute exclusively for the sustenance of the religious needs. In some cases these were towns removed from the city proper which were tributary to the temples and which alternated each half year (41). But we do not know what happened during the

41. Torquemada, II, p. 164.

half year when they did not give tribute to the temples. It may be that they continued with their calpulli organization and perhaps only gave tribute to their lords.

423 Something similar to that which occurred with the lands of the
652 temples happened with the lands for war, or yaotlallis, which had various names according to the products which they yielded, cacalomilli, milchimalli (42) and which were "for /p. 43/ food

42. Vetancourt, I, p. 372.

423
652

rations during periods of war" (43). In part they were lands distrib-

43. Torquemada, II, p. 546.

uted "in calpullis and wards according to the number of people there were in each district" (44), possibly of the city proper. These lands

44. Torquemada, II, p. 546.

were to be found also in conquered areas, since we are told that Moctezuma had in all the towns lands marked out which they sowed for him, as for the temples, and whose produce they brought to Tenochtitlan—if there was no garrison—or the garrison ate it, and if they did not sow, they fed them [the garrison] at any rate (45).

45. Oviedo, III, p. 537.

Thus they appear to be simply lands of the calpullis the tribute from which was destined for the sustenance of warriors and for the needs of war. There is however a reference which apparently contradicts the above, although it is possible that it only supplements it: we are told that these lands for war were on the boarder lines and belonged to no one, nor did anybody inherit them, they being occupied and kept up by the chief who was promoting the war (46). This

46. Anonymous. Relation [Relacion], 1554? p. 145.

appears to mean that the tribute from these lands was not inherited by a determined person but was given over to whoever was the war-chief. Indeed they were occupied by common laborers but their tribute was given to the chief of the armies for the needs of war. The reference to their being on the boarder lines may mean that they boardered on conquered land. The possibility that the characteristic of this type of land was that it was destined solely for tribute could be reinforced with the data of Ixtlilxóchitl where [one finds that] in the lands of conquered lords and subjects there were other kinds of land divisions which were called laotlalli (sic. Yaotlalli), which were gained through wars, and of these the greater part belonged to the three heads of the empire one of whom was

423 652 the war chief; and the rest was given and distributed to the lords and citizens who had aided with their persons and vassals in the conquest of such towns gained in war and this most of the time came to be a third of the conquered towns or provinces (47). According to the

47. Ixtlilxóchitl, II, p. 170.

above it appears that the criterion for characterizing this type of land ownership was the ownership of tribute since they were in reality lands of the calpullis like the rest.

423 We are told of another type of land: the tecuhtlalli (the lands of the tecuhtlis). To elucidate what this means we have three references: one, that on these lands the rulers and lords sheltered those who came fleeing from other towns and provinces (48); another, that

48. Annunciation [Anunciación], p. 238.

each Indian lord on his land /p. 44/.....

[Missing section of text. Translator].....

...when people came to it to settle from other parts and to those that were settled they gave land on which to sow, marked "that everyone might know the lands he is to sow, and most of them have their house on the inheritance which they consider their own" (49).

49. Oviedo, III, p. 535.

According to this all the lands which gave tribute to the tecuhtlis appear to be called tecuhtlalli but their organization may have been in calpullis if the arrived settlers remained together with those who were already settled. One has to think, this possibility notwithstanding, that population immigrations were not always of peoples forming calpullis nor that they organized themselves into calpullis upon becoming established. It could well be that part of these lands were those they called tlatocamilli, of which it is said they were 400 units in length and width, that they were leased, and that the rent was eaten and consumed in the house of the ruler (50), and they

423

50. Ixtlilxóchitl, II, p. 170. We are also told that they were called itonal intlacatl which means something like "the sign of the birth of the people," that is, perhaps they were those of the ruler's lineage.

[the plots] were many and good, but they could not be disposed of, that is, sold (51). It is possible that the remainder of the tecuhtlallis

51. Zurita, p. 105.

were the lands of the calpullis which could be rented for the benefit of the calpulli (see p. 39). In any case we can accept that in part these lands appear to be lands of the calpullis the tribute from which was for the tecuhtli or tecuhtlis, and that in part the tlatocamilli indeed appear to have been lands possessed by a very limited group, worked by lessees, but by a group with very special and surely hereditary characteristics. Perhaps they were the lands "of the king's household," painted in flesh-color.

The forms studied up to now are communal, the produce of which is divided among those who work them and their chiefs, in different ways. We are finally going to consider a type of land ownership which is completely different from them because it appears to be private property.: We are told that some kinsmen of the rulers, [525] and some lords and merchants, had lands which they could gamble and sell (52). It would appear from this simple fact that there was

52. Oviedo, III, p. 535.

a true free commerce in land; but such was not the case. In the first place in what we have just set down we see that only some of the kinsmen of the rulers, some of the lords and some of the merchants possessed land in this way. If the lords were not at most more than ten percent of the population (see p. 24), the number of such owners must have been very small. In the second place, with respect to the merchants, we can say that if, as we have seen, they evinced a division between nobles and plebians (p. 25), the most likely thing is that the plebian merchants /p. 45/ could not be owners who disposed of their lands freely, as neither could the common macehuales nor even those ennobled through acts of valor (53).

423 53. Torquemada, II, p. 545, 546. Vetancourt, I, p. 273.

This considerably limits the number of owners as well as the number of holdings of this type. Furthermore lands that were subject to any entailed estate could not be sold (54), which surely means that the

54. Torquemada, II, p. 545.

lands which could be sold were not the lands destined for the sustenance of governors of the Tenochca group, nor those destined for the sustenance of the chiefs of the calpullis, nor those set apart for the priests, or for the warriors, or for the hiers among the common members of the calpullis. Perhaps then it concerned parcels of conquered land given to valiant macehuales or to pillis but which were no longer occupied by the macehuales of calpullis, but possibly by the war dead. These plots must have been very few and certainly they did not form the base of society as it stood around the time of the arrival of the Spanish. The lands with occupants given to the valiant nobles were perhaps lands of the calpullis, as were those of the temples, etc., and really constituted only forms of ownership of tribute; on the other hand these, without occupants, indeed were lands with characteristics of private property, from which rent could be obtained if one were noble but not if one were an ennobled macehualy (55), (see p. 40). That is to say that although escaping in part from

55. Torquemada, II, p. 545, 546.

the concrete form of organization into calpullis, they remained within it by being the exclusive property of people whose rank was hereditary, the existence of these ranks being tied to the existence of the calpullis, as we have seen. It remains to find out what were the characteristics of the calpullis in order to decide beyond doubt what was the basis of this special form of the organization of land ownership.

423 We have seen how the distribution of the land was made principally by calpullis which resemble property-owning groups. In this way
x618 it appears easy to see the role of the calpulli chiefs: the unity with personality was the calpulli, but the chief was one in authority

423
x618

before the other calpulli members as before strangers, and the tribute which was rendered him perhaps was not so much as to a proprietor as to a functionary; although very possibly with the course of time there had come about a separation between the ideal role of chief and the real role, the chief taking advantage of his position to obtain a standard of living much superior to that of the macehuales of his own calpulli. This organization of the ownership of the land by calpullis appears to be the fundamental one, and the derived one that of the existence of lands whose tribute was destined for the sustenance of functionaries with very diverse social roles /p. 46/ (priests, warriors, etc.) who really do not seem to be proprietors of land but who have rights to tribute from the calpulli lands. Only the lands of the ennobled macehuales and those of the lords not subject to entailed estate escaped in part from this organization of property by calpullis. All this presents us with two possibilities: one is that the macehuales and the pillis held their lands in common (calpullalli) and that part of these was worked for the sustenance of the pillis, or of the priests or the noble warriors (pillalli). The other possibility is that the macehuales held their lands in common (calpullalli) and the pillis held theirs privately (pillalli, tecpillalli, tlatocamilli) but with certain restrictions of a social nature. In any case both groups, pillis and macehuales, would be owners of lands, and at any rate the lands would remain not subject to being entailed—those of certain tecuhtlis, lords, and merchants—as privately owned lands, but with so many restrictions regarding the persons who asked to possess them, that they did not remain as a principal structure, but secondary in importance. That there were other forms of ownership of the land does not upset the fundamental structure if they do not predominate: we could say that almost all the cultural phenomena obtained in all the communities; but that the important and basic ones are not the same in all the communities. The fundamental problem lies then somewhere else: the ownership of land being strongly determined by the existence of the calpullis, we have to find out what were the bases of the calpullis in order to decide whether these forms, which were the most widespread and important concerning ownership of land, were or were not determined by phenomena of kinship through common descent.

/p. 47/ Chapter 5

SOCIAL DIVISION OF LABOR

463 There is another aspect of the social organization of the Tenochcas which has seemed to indicate that it was not based on kinship through common descent but rather on economic production: the social division of labor by specialized groups similar to guilds. Analyzing the data from the sources for the history of Mexico, it is found that, in this aspect as well as the preceding, the calpulli was a fundamental element.

Whether during a given period the laborers constituted the totality of the population of Tenochtitlan is something which we still do not know. What we do know is that by the time of the arrival of the Spanish a very complex situation was present. Through a reference made during the colonial period we know that all the inhabitants, although they might have another occupation, had their lands for cultivation (1) although they might farm very little (2). This surely

1. Torquemada, II, p. 430.

2. Description of the Archbishopric /Descripción del Arzobispado/, p. 278.

was even more general before the arrival of the Spanish, that is, that cultivation was an activity common to the entire population, perhaps excepting the lords; still, it was not the only activity for all people, some having other occupations. Everybody could, "work a stone, twist a rope and procure the materials to make it, and /do/ the other tasks which do not require much skill" (3). Complement-

3. Zurita, p. 189.

ing this, there was a differentiation in the activities of the people to produce those things "which were to be sold" (4) and a true labor

4. Motolinía, Memorials /Memoriales/, p. 236.

force market which was offered like any other merchandise (5).

5. Zurita, p. 83.

463 That is, there was a social division of labor present which we could call artisan. We know of the existence of merchants—people who specialized in the interchange of objects not produced directly by themselves. From this we can infer that there was a division of labor between laborers, artisans, and merchants in addition to that which we have already seen among /p. 48/ manual laborers and directors. Some authors have thought that these merchants constituted a social class (6) or the beginnings of a social class (7) or a

6. Moreno, M., 1931, p. 33; Toscano, S., 1946, p. 782.

7. Acosta Saignes, M., 1945, p. 21.

caste (8) or that the artisans constituted guilds (9) derived from clans

8. Thompson, J.E., 1933, p. 126.

9. Cunow, H., 1926, p. 275-278; Kohler, 1924, p. 29.

which became units of the social division of labor (10). Let us elucidate this.

10. Krickeberg, W., 1939, p. 287.

On one hand the merchants were counted in their calpullis (11),

11. Sahagún, I, p. 44.

that is, they belonged to calpullis. On the other hand, in speaking of the merchants and of the artisans, we are told that there was every class of person in the calpullis (12) and that the merchants and arti-

12. Zurita, p. 143.

sans were "of these wards and calpullis" (13), assertions from which

9:Monzon--51 E-4 (no date) 1949 NU7 Aztec NU7

13. Zurita, p. 105.

463 we can infer that the merchants as well as the artisans and laborers were in the calpullis.

Furthermore, on the one hand, in general the parents educated their children to exercise the same occupations [as they, the parents] (14), and on the other is made a statement of much importance:

14. Mendocino Codex [Códice Mendocino], folio 70; Zurita, p. 110, III; Román y Zamora, II, p. 127, etc.

that upon the birth of children of the common people they placed in their hands miniatures of the instruments of their calling (see p. 28). One gathers from this that from birth it was known what a child's occupation would be when he reached adulthood; and that this occupation usually was that of his father, that is, that there was inheritance of the productive occupation. This surely also happened with the merchants, since we are told that they could only be merchants with the permission of the rulers or because they came to it through inheritance (15). We thus have, beyond doubt,

15. Zurita, p. 142.

inheritance of occupation in the social division of labor.

463 It appears that in Tenochtitlan this division of labor occurred by
X618 wards, as in Tezcoco (where those in one ward had the same occu-
795 pation, all those of the ward must have it and there must be no mix-
ture of others with them (16)), since in all the provinces of Mexico

16. Torquemada, I, p. 146.

the specialization in things to sell was by "wards" (17). Moreover

17. Motolinía, Memorials [Memoriales], p. 236.

—and this is the fundamental proof—one can establish a correlation between names /p. 49/ of "wards" and occupations (see p. 50), drawing together scattered data or Torquemada's and Sahagún's which refer to this division of labor and to the specialization by

463
X618
795

groups in the worship of the deities. Three affirmations reinforce this correlation: one concerning the magical consecration of the people to an activity which was made before some idol (see p. 28), probably the ward idol; another was that the festivals of some months were "like" guild festivals (18), that is, of isolated groups, probably

18. Jonghe, p. 292.

of wards; and finally, that in the festivals for the idols were involved the members of a single "ward" and not those of others (19).

19. Magliabecchi, Commentaries on the Section [Comentarios a la Sección] 92.

The result of this correlation between activities, "wards" and deities is presented here in a table, and explains completely for us the character of the social division of labor in Tenochtitlan: it was by "wards" which separated tribal chiefs, pulque-makers, merchants, etc. It is a division which could be called a class one only with difficulty, since it makes no sense, for example, to speak of the class of pulque-makers since, if that were the case, they would be on an equal "class" footing with the merchants. It would appear rather to correspond to a guild division, since the class of a guild is the organization of people who do the same work (20) and that

20. Boak, A.R., and Pirenne, H., 1944.

within them obtains the separation between manual workers and directors which was present also among the Tenochcas, as we have already seen (see p. 23). However it would be very strange to speak of a guild of rulers, as we would have to do if we accepted that the division of labor by "wards," which the Tenochcas envinced, was by guilds; and it is to falsify the situation since the lords do not possess the characteristics of manual labor which are basic in a guild organization. I believe I can prove, furthermore, that these "wards" — which probably were calpullis since in general their names do not coincide with those of the tlaxilicallis—were clans, and that therefore the division of labor, like the ownership of the land, the territorial distribution of the population, and the social stratification, were the result of an organization of the Tenochcan population by

463 clans. And thus indeed it is not anachronistic to speak of clans of
X618 rulers, nor of clans of pulque-makers.
T85

/p. 50/ TABLE OF CORRELATIONS BETWEEN CALPULLI-WARDS, CALPULLI-TEMPLES, OCCUPATIONS AND DEITIES IN TENOCHTITLAN (1)

1. The names are for the most part of calpulli "wards." Nevertheless at times names of temples were taken which certainly corresponded to "wards." They appear in this case not to correspond to tlaxilacallis, except for Tzapotlan.

/p. 53/ THE CALPULLI AS A CLAN

Chapter 6

X618

/p. 55/ PROOFS THAT THE CALPULLI WAS A CLAN

The territorial organization of Tenochtitlan, the ownership of land, the division of labor and the social stratification, and other aspects of the social organization of Tenochtitlan which were not treated in the first part of this study, such as education (1) and religion

1. See Education among the Aztecs /La Educación entre los Aztecas/, Monzón, 1946.

(2), in which the influence of the calpulli is of great importance, and

2. In the chapter referring to the division of labor I touch lightly upon these relationships between calpullis and religion (p. 49) which suggest problems which should be studied more fully.

which have themselves a determining role, present us with the fundamental problem of the social organization of the Tenochcas: Were the calpullis clans, or simply wards, or guilds, or another type of social organism? Outwardly they have elements of all the foregoing. What was their internal organization? The answer to these questions will give us for sure a correct idea as to the bases of the social organization of the Tenochcas and of its evolutionary stage. Therefore we are going to attempt to answer them. The calpulli (Nahuatl 'large house') is an organism which has been presented as a clan by some authors, or as the remains of a clan by others (see the Introduction), and certainly the calpulli was the Tenochca clan, if the Tenochcas had clans. This granted, in order to know whether the calpulli had

X618 characteristics of a clan, we have to elucidate if the individuals who belonged to a calpulli belonged to it because from birth they had ties of kinship with the other members of the calpulli, or whether on the contrary their ties originated in the fact of certain people living in the same place; that is, whether or not the bonds of kinship through common descent existed among the members of a calpulli. Actually, this process can be reduced to discussing the data encountered in the revised version of The Sources for the History of Mexico, made to elucidate this point, and which in general—I can anticipate—can be considered sufficient to demonstrate that among the Tenochcas there were groups having a type of ambilateral stratified clan—the calpullis—there being really no reasons for asserting the contrary.

/p. 56/ Let us say at the same time that there have also been valuless arguments presented to support the existence of clans among the Tenochcas. One of them is the assertion that a 16th C. author, Pedro Martyr, spoke of communal houses (3); but reading attentively,

3. Watterman, 1917, p. 296, following Morgan and Bandelier.

one finds that the mention, made in Latin, refers to the "common of the houses" or better "the generality" of houses (4) and not to their

4. Martyr, Pedro, 1945, p. 424.

communal character. In the same way, forcing the material at our disposal on these matters and simply denying the value of the information, Morgan (5), followed apparently by Bandelier, asserted that

5. Morgan, L. H., 1877, p. 203. Note.

the Tenochcan community was democratic and completely gentile, which fit well with the existence of exogamous clans. This is erroneous: if the only sources available to become acquainted with the social organization of the Tenochcas are the chroniclers, we have to find out what we can from their information and see if it is congruent. Of course we cannot trust their simple words, as Wattermann so rightly noted; but neither can we simply deny them validity as basic data.

X618

Let us commence now with the proofs of the existence of clans among the Tenochcas. Cortes tells us of "communities" (6) and of

6. Cortés, Hernán, Narrative Letter [Cartas de Relación], I, p. 102.

"groupings" ["colaciones"] (7) in Mexico Tenochtitlan, terms which

7. Cortés, Hernán, Narrative Letters [Cartas de Relación], I, p. 101.

are really quite vague. Most of the time all the authors who speak of the calpullis with Spanish terms do so in the same vague form. However, we have a very clear definition of the calpulli thanks to Zurita, a Spanish writer who must certainly have had first hand information and who as far as we can ascertain, tried to transmit it faithfully in writing. He presents the calpulli to us as undoubtedly a clan: "calpulli or chinancalli which is all one, means a ward of people who know each other, or an old family which has had for a long time land with recognized boundaries which belong to that stock, ward, or family" (8).

8. Zurita, A., p. 86, 87.

In this definition there enter without any doubt elements which point to phenomena of kinship by descent (family, stock) as well as elements of territoriality (ward, land, boundaries). What we need to find out is which of these were the primeordial ones, the determining ones, whether those having to do with kinship or with territorial matters.

We are told that the calpulli is a "lineage." Lineage is in general defined as /p. 57/ descendence or line from some family (9) and has

9. Barcia, Roque, Dictionary [Diccionario].

in no way a fundamentally different meaning. According to this the calpulli had its basis in descent, or—which comes to the same thing—"ascent," a basis in kinship through "ascent."

X618 "Cepa," another of the terms which Zurita also uses to define the calpulli, literally means "the part of the trunk of any tree or plant which is undergrounf and joined to the roots" and metaphorically is taken as "the trunk or origin of any family or lineage" (10). Why

10. Barcia, Roque, Dictionary [Diccionario].

would our chronicler put emphasis on something which did not exist, if he knew nothing of the theory of the formative principles of clans? Here undoubtedly he again makes a strong point of kinship by descent of the calpulli members. There is no reason to deny that the origin of the calpulli members was of prime importance for the existence of the calpulli as it was for every clan.

In what we have analyzed up to now it is clear that the descent, the origin of the calpulli members is the same for all, common to all, since this is the meaning of "eepa" and of lineage. But Zurita also uses the term "ancient kinship," applying it to the calpulli. This indicates to us that the common origin of the members of the calpulli is distant through descent, precisely as that which unites the members of any clan (and not that of a family, as might be argued). Francisco Hernández uses repeatedly terms which suggest—corroborating the above data—the existence of groups with kinship through common descent: "consanguineals" (11), "blood relatives" (12), etc.,

11. Hernández, Francisco, p. 18, 28, 29, 30, 31, etc.

12. Hernández, Francisco, p. 30.

which only can refer to groups of a clan type.

But as we have already said, in this definition which we have under scrutiny three concepts appear which are not connected with phenomena of kinship: ward, land and boundaries. This causes us to suspect the importance of territory as a formative basis of the calpulli. But it is easy to see that the use which is made of these terms reinforces rather than weakens the prime concept of kinship as the basis of the calpulli: we are told that the lands and the boundaries are the calpulli's, the "cepa's" or the lineage's, and we are not told that these same are the calpulli. According to this the personal part is prior to the territorial part in the calpulli. "It is known that for a

X 618 long time each calpulli has occupied certain lands the boundaries of which were set"... this is surely what the author wished to tell us in the phrase which we /p. 58/ are discussing when he uses terms indicating territory.

But there is another term, ward [barrio], which appears in the definition which we are discussing and which is very commonly used as a synonym of calpulli, or of "cepa" or lineage. In one of the cases where Zurita uses it he adds to it that it is "of known people" and not just any ward. This can be explained because our chronicler himself noted that the calpulli was not merely a ward and that to use the term without qualification would lead to confusion. Only in this way can his emphasis on the personal aspect, "gentile"—of people—of the term ward, used in place of calpulli, be accounted for.

But it is common—as Zurita does on other occasions—from the first writers about Mexico (13) to use the term ward as a synonym for

13. Cortés, Hernan, Letter to the Advisory Council of the Indies [Carta al Consejo de Indias], p. 540.

calpulli. Ward [Barrio] in Spanish and without qualifications means nothing more than "a territorial division of a town" (14). But some

14. Barcia, Roque. Dictionary [Diccionario].

Spanish chroniclers among those who used the term ward as a synonym for calpulli in order to give us an idea of what a "ward" was in Mexico, define it in a different way, surely because they were aware that its meaning applied to ancient Mexico, was not the same as when used to refer to the wards of their own land. "The ward," they tell us, "consists of families and of a few houses because the family people and those living close to home multiplied in children and children-in-law and grandchildren and nephews and nieces, so that it was not possible to live without much confusion, because of which the families split up into private houses, each family member knowing just where he belonged" (15). This definition of "ward" has, as

15. Torquemada, II, p. 812.

a characteristic of much importance for our subject, the relationship

X618 between persons united through a kinship recognized by its members, and is the meaning which applied to the Tenochca "ward"; in no way does the territorial reference in the general definition appear as fundamental. It is a definition which approaches closer the concept of a group of persons in a clan, than to the territorial concept of a true ward. Possibly the word ward was used by the chroniclers—they being Spanish—simply as one of the partial equivalents to the concept of calpulli, because they did not have a complete equivalent, such as clan, based on personal relationships of kinship through common descent.

There are other affirmations which make completely clear for us the relative value of kinship through descent and of territoriality in the calpulli: "it was not and is not permitted (before and while the chronicler wrote in 1585) that those from one calpulli work the land of another calpulli, so as to avoid /p. 59/ their mixing with one another and so break away from the family" (16). The prohibition

16. Zurita, p. 87, 88.

that is here set down, for members of one calpulli to work the lands of another calpulli, would not make sense if the calpulli had territorial location as a basis of its organization, if the calpulli were simply a territorial division. Even in the case that there were impediments to work the land of another proprietor, the "to avoid their mixing with one another and so break away from the family" would not have been put forward as the principal reason for the prohibition against the members of one calpulli working the lands of another calpulli, which rises as an insurmountable obstacle for making out the calpulli an organization simply rooted in location or in territorial property; since were it thus an individual could change calpullis by merely changing his geographic position. Surely we have something prior—in each case—to location and to the territorial division in the calpulli which is what determines them; as happens with localized clans.

The important thing in the assertions discussed until now is that they refer to the period when the Spanish were already dominating the Mexican territory. It was not a situation which had ceased to exist before the conquest as some authors have pretended, but was alive, although moribund because of European influence. And if it was still alive at that time it must have been much more so before

9:Monzon--64 E-4 (no date) 1949 .NU7 Aztec NU7

X618 the arrival of the conquerors when the new modifying influence had still not made itself felt, an influence which was not and could not have been a reenforcement of Indian institutions, and particularly not those based in kinship by common descent (17).

17. Legally the disappearance of the inheritance of political power occurred around 1555 (Chávez Orozco, 1943, p. 5, 6).

The use of the term town [pueblo] as an equivalent of calpulli is frequent (see p. 34). It was also frequent to use the term town [pueblo] as an equivalent of exogamous clan (see p. 62). It could well be then that the term town [pueblo], used as the equivalent of calpulli simply had the meaning of settlement under certain conditions, let us say isolated and constituted by a single calpulli; what in other conditions would be a ward; established on the lands of a settlement occupied also by several other calpullis (see chapter 3). One could use as an argument in favor of the calpulli's being a clan, that considering it as such, these contradictions in the translation of the term, which are otherwise insurmountable, disappear.

We can also use as another argument the comparisons made by the chroniclers—who knew the calpulli—between this [the calpulli] and other organisms of /p. 60/ which they had written references: the 36 Roman "tribes" (18) which certainly were clans (19). These

18. Vetancourt, I, p. 223.

19. The proofs of Morgan in Chp. XI of the third part of Ancient Society [La Sociedad Antigua] are very convincing.

writers by means of these comparisons tried to give us an idea of what a calpulli was: it was a "tribe" of this sort, a clan, except that it was called calpulli.

Also in the sources are found two other terms which surely are comparable to calpulli: kindred [parentela] (20) and faction

20. Muñoz Camargo, p. 148, 149.

X618 [parcialidad] (21). In both cases the emphasis of the concept is on

21. Torquemada, II, p. 412.

the personal relationship: in the first clearly on the relationship of kinship. However, we cannot assert that these terms always had the meaning of clan. The same can be said of the terms used by Cortés: "communities" and "groupings" ["colaciones"].

I believe that all the above proves with sufficient clarity that the calpulli was a clan, which had as its very basis the relationship of kinship through descent of its members. We have already seen, furthermore, that it had a fundamental importance and that it molded the greater part of the social relations of the Tenochcas' life. Thus it cannot be denied that it was a clan, that this was functioning and was not the vestige of a clan or something else. This verifies the fundamental thesis of Morgan and Bandelier (and corroborates Olson's assumption (22)) that among the Tenochcas there were organisms

22. Olson, Ronald L., 1933, p. 369.

based on kinship through common descent. The "gentile" base of the calpulli, contradicting the idea that it was merely territorial—a ward—was also verified by Redfield's investigations in Tepoztlán in 1920 where the remains of the ancient clans which still bare the name calpulli are to be found; there are members in some of these calpulli which live in others, but who are recognized as belonging to the original calpulli, located in a different place (23). This only

23. Redfield, R., 1920, p. 288.

can be explained as being the result of an ancient organization based on kinship through common descent, and cannot be explained at all if we assume that its base is location or territorial property. It only remains to discover what type the calpulli-clan was in order to clarify the whole picture.

9:Monzon--66 E-4 (no date) 1949 NU7 Aztec NU7

Chapter 7

INDICATIONS OF THE CALPULLI'S BEING AMBILATERAL AND WITH AN ENDOGAMOUS TENDENCY

X618

To accept that the Tenochcas had clans is simply to accept a historical truth. But this truth creates a great number of problems for the investigator: What type of clans were these calpullis; how did they function; up to what point did their existence have social importance; how is the complexity and the cultural richness of the inhabitants of Mexico-Tenochtitlan to be explained if they were still tied through the bases of their organization to very primitive communities? Some of these questions are answered in the course of this work; others, not. Among those the resolution of which will be attempted is the investigation of what type of a clan the calpulli was.

It must be said of many of the very advanced societies which have been considered as being on a very high level of culture—such as the Greeks, the Incas, the Mayas, for example—that we know that they entered history as groups with clans. Nevertheless we still have standing almost in its entirety the problem of knowing what type were the clans they had, in accord with the new theoretical possibilities about this point.

The Tenochcas entered history with clans. Exogamous, as some authors say, remaining on a comparable level with the Iroquois? Ambilateral and non-exogamous, remaining on a level comparable to the Incas? We are obliged to elucidate this for only thus can the peoples of central Mexico be placed in their true historical position. Indeed Watterman in part sees this when he tells us that it is not even known whether the calpulli is an exogamous or an endogamous clan (1), except that for him this distinction does not imply a basic

1. Watterman, 1917, p. 273.

difference in structure as Kirchhoff's distiction does imply.

In general it is easier to find data on what a community has rather than to find out about what it lacks. But it is not always so: upon

X618 /p. 62/ investigating the existence of clans in communities which now cannot be studied directly, such as the Tenochcas, one finds that the writers are not very explicit in that regard and only offer a few isolated data. From among the latter we are going to analyze the data which refer, first, to the possibility of their having had patrilineal or matrilineal exogamous clans, and then, to the possibility that the calpullis were ambilateral with an endogamous tendency.

There is room to believe that a case can be made in favor of the calpulli's being a patrilineal clan in the very widespread custom in central Mexico of thr woman going to live in the house of her husband after her marriage, (a custom technically designated as "patrilocal") (2). But in this respect one must note that this custom of one of the

2. Román y Zamora, II, p. 90; Motolinía, Memorials [Memoriales], p. 260; Zurita, p. 69; Sahagun, I, p. 118.

couple going to live in the house of the other tells us nothing about the characteristics of the reckoning of kinship through common descent of either of the two, let alone of both. Ethnic groups are known with patrilocal customs and patrilineal clans, or with patrilocal customs and matrilineal clans, or with patrilocal customs and ambilateral clans, and with patrilocal customs without clans. And the same happens with matrilocal customs: the reckoning of kinship through common descent and the location of the house of the married pair are independent traits and by no means is the fact that there were patrilocal customs an argument in favor of there having been some special type of clan.

Furthermore there is in the sources an absolutely categorical denial that there were exogamous patrilineal clans among the Tenochcas: "the Indians of Vera Paz... habitually married outside of their own tribe or town... (and) they did not have as relatives the kin of their mother, for these were in another town... (and) the reckoning of kinship was only through the men... (and) the Mexicans and the Texcocans never made marriages along the lines of some of the nations mentioned (3)." This means in our terminology that the Indians of Vera Paz

3. Torquemada, II, p. 418.

had exagamous patrilineal clans and that the Mexicans (Tenochcas)

X 618 and the Texcocans did not have them. The clarity of the report is such that it needs no other comments.

On trying to see whether there are arguments in favor or against the calpulli's being a matrilineal clan we find that there are no such categorical affirmations as we have just finished discussing. Of course this was to be expected if the calpullis were not matrilineal clans. Why should the chroniclers always mention absent traits? /p. 53/ Nevertheless we can make various considerations about the possible existence of matrilineal clans, which almost have the force of arguments. In the first place, in the event of the kinship of calpulli members having been reckoned by the maternal line, the chroniclers would have said so with even more clarity than that which they used to explain the existence of patilinear clans in Vera Paz. It is possible that they might not have mentioned patrilineal descent in the event of this being the manner of reckoning kinship of the calpulli members; but certainly they would not have failed to mention matrilineal descent which, precisely because of its strangeness to Spanish eyes, would have aided them greatly in discovering its basic principle. It is our opinion that the above is also an argument of great weight for believing that the calpulli was not a matrilineal exogamous clan, although undoubtedly it is of less weight than the categorical affirmations of the croniclers themselves.

Furthermore and as a final argument against the calpullis having been exogamous clans, we have the many probabilities that they were ambilateral. We have already seen that it is affirmed that the members of one calpulli should not work the lands of another calpulli for fear that it might result in a mingling or a breaking away from the family (see p. 59) (4). What possibilities are there for inter-

> 4. We have already seen that this rule was not so strict and that the members of one calpulli indeed could work the lands of another calpulli; but with certain limitations, such as [being] warriors, and in such a manner that clan unity was not strained.

preting this? One is that the prohibition referred to the fact that the men of one calpulli ought not to mingle with the women of another calpulli, and surely this is what Zurita meant, in which case we would have a plain confirmation of the endogamous tendencies of the calpulli.

X618 But we have to think about another possibility for interpreting the assertion: that it was the mingling of the men of different calpullis which was not permitted. In such a case the datum would tell us nothing about our problem, which refers to the relationship between men and women in relation to kinship by common descent.

Zurita's assertion presents a third possibility: that it [the prohibition] had at its root the keeping of the men of each calpulli as a unit of work. In this case also nothing would be said about our problem. Nevertheless, in this case, as in the last, the assertion lacks a true meaning, and does not appear to be what the writer we are talking about had in mind.

Indirectly, the above notwithstanding, the assertion which is obtained in making the second interpretation to the Zurita quote, that there was not to be /p. 64/ mixing of men of different calpullis, can also lead us to think that the calpulli members had no exogamous customs if we complement it with another datum, from Sahagun: "They said that the girls who ate standing up would not marry in their own towns but in distant towns and because of this mothers would forbid their daughters to eat standing up" (5). The datum is very un-

5. Sahagún, II, p. 32; also Jonghe, p. 375.

certain, but having seen that the chroniclers at times identified clans with towns [pueblos] (p. 62) and that in other cases calpullis were identified with towns (p. 34) it indeed has the semblance of an indication that it dealt with the fact that the women were not to leave to marry outside their calpulli. Complementing this datum with the earlier one that the men did not leave the lands of their calpulli, we are confronted with the possibility that neither the men nor the women left their calpullis to marry: they preferred to do so with members of their own clan.

Let us go on to another argument. On one hand various sources make the assertion that the relatives of the future husband were the ones who brought the bride to the house of the groom for the realization of the marriage (6). On the other hand, illustrating this event,

6. Sahagún, I, p. 18; Motolinia, Memorials [Memoriales], p. 260; Torquemada, II, p. 412.

we have in the Mendocino Codex [Códice Mendocino] (7) a drawing

7. Mendocino Codex [Códice Mendocino], Folio 61.

X618 whose caption says "an Amanteca who carries on her back another Amanteca in order that she marry." Outside of Tenochtitlan, there were several places which were called Amantla (from where the Amantecas come); but also in Tenochtitlan there was a ward with this name from which place the persons in the illustration could have been, since the source refers to that general zone. According to this, the person who carried the bride on her back, who was one of the relatives of the husband, was an Amanteca and therefore so also was he: it was a marriage between calpulli relatives, that is, through common descent, and refers, then, to an endogamous marriage. Then again we have also more possibilities to discuss which tell us nothing about the identity of the husband's calpulli. One is that, although it may be an Amanteca (the one who carried the other on her back) related to the groom, it may well be that this kin-bond was not through common descent but simply by affinity ("by marriage") in which case the groom could well be of a different non-Amanteca calpulli. Moreover there is a quote which tells us that those who carried the bride on their backs were her relatives (8). If we take

8. Román y Zamora, II, p. 90.

this assertion together with the previously mentioned illustration of the Mendocino Codex [Códice Mendocino] we know nothing about the identity of the groom's calpulli.

(f) León M. Adrián F., 1943.

/p. 67/ It would not be an argument either for or against exogamy or non-exogamy of the calpulli.

But really we can merge both references, the one which stated that the persons carrying the bride ere her relatives and the one which stated that they were the groom's relatives. The result is that they were all relatives: she, those who carried her, and the groom. This interpretation has the advantage of erasing the apparent contradiction between the affirmations and of making them congruent. By joining the two quotes with the illustration from the Mendocino Codex [Códice Mendocino], which speaks of Amantecas, we find that the relationship of the affianced pair is not a family one, but of the calpulli, that is, through common descent: the calpulli was not exogamous.

There are also references which oblige us to think that there was no exogamy in the calpullis: according to a late source, they avoided marriages with mother or daughter "and sometimes with the sister," but they paid no heed to other degrees of kinship (9). This is clearly

9. Hernandez, Francisco, p. 32, 33.

to express that there was no exogamy, and even that there was a strong endogamous tendency.

So far we have analyzed affirmations which refer to the population in general. Let us see now the conclusions which can be obtained from the geneologies that exist of the Tenochca rulers. Although they only refer to a part of the population, as we know that it is mentioned that among them there existed a strong tendency to marry people of distant places, in the event of indicating the absence of exogamy they increase the general value of our clues. We find as an argument of the first importance endogamy which points to the occurrence of marriage between parallel relatives, either on the father's or mother's side (see the Table). The data on marriage in general is very abundant; but of those that interest us six have been found. These as a whole are impossible in groups with exogamous clans and are only possible in groups with an endogamous tendency. Cases 'b', 'c', 'd', 'e', and 'f' could have come about only—in the event of the calpulli's

X 618 582 being an exogamous clan—if the calpulli were matrilineal since had it been patrilineal the marriage would have been between relatives, which is contrary to the very principles of the exogamous clan. Case 'a' only could have occured—had the calpulli been an exogamous clan—in a patrilineal clan since otherwise it would have been between clan relatives. All the marriages could have been realized only in the event that the calpulli did not have exogamous rules in any line: that is, that it had an endogamous tendency.

X 618 582 565 The contradiction between the endogamous tendency of the calpullis and the undoubted custom which the governing group had of /p. 68/ making their marriages between people of distant towns is only apparent; on one hand it can be thought that many of the members of the governing group of central Mexico were relatives through common descent and married one another for this reason (this would be reinforced by a few exceptions such as Tlaxcalla, with [whose people] marriage was never joined). On the other hand the situation can be viewed thus: the members of the governing group did not follow strictly endogamous rules as did the others of the community, but simply had the tendency to seek in every concrete case the improvement of their lineage (which, moreover, is a trait of ambilateral clans). In general these two explanations do not excluse one another, and in fact, we find that among the Tenochcas there were calpullis which extended over more than one town and that members of different calpullis married (10). The first is suggested by the repeated

10. Referring to what happens in present calpulliwards, which appear still to have something of the reckoning of kinship through common descent as their basis, Redfield tells us that the majority of people live in the ward where their ancestors lived for generations and that generally the belonging to a ward is by inheritance (1928, p. 287), and then he informs us that he did not find evidence that the belonging to a given ward affected the choice of a wife. There appears to me to be a contradiction in this, since if the belonging to a calpulli is hereditary and if the calpullis are localized, the only way in which they might remain localized would be by the joining in marriage of people of the same ward. Very probably it happens thus, there being also a patrilocal custom within

X618
582
565

the same ward; although some marriages may occur between persons of different wards, perhaps still according to special circumstances. The considering of the calpulli as a clan with endogamous tendencies, which is even now found as a vestige in Tepoztlán, removes these contradictions, which can also be taken as an argument in favor of the new position which is here presented with respect to the calpulli.

names of some isolated towns which seem to have been calpullis (like Pochtlan, Amantla, etc.) and the second is suggested by the affirmations of marriages between different lords (see p. 72).

X618
611

We have, finally, as an indication of the existence of this type of clan, an argument in favor of the fact that among the Tenochcas the reckoning of kinship was ambilateral. This refers also to the members of the population's governing group; but the fact that they also had their calpulli and for the reasons presented in the paragraph concerning their habit of endogamy, largely invalidates the objections which could be made in this respect. In a large number of cases, in the genealogies of the Mexico-Tenochtitlan rulers both lines, that of the father and that of the mother, are taken to fix the inheritance of each person; this is clearly an ambilateral characteristic. Of course it can be taken to refer to the reckoning of kinship within the family, which is always ambilateral, and not to the reckoning of kinship through common descent, of the clan, which could be unilateral of ambilateral. But in part this objection is done away with /p. 69/ when we see that in the sources from the same period, but referring to other groups than the Tenochcan, connections are made always through persons of male sex as if they were unilateral (11), and only

11. Espejo, Antonieta and Monzon, 1945, p. 48.

in those [sources] dealing with the Tenochcas (and others who do not interest us now) are connections made through both sexes. According to this, we have the right to think that the reckoning of kinship common descent was made ambilaterally among the Tenochcas (12).

12. Redfield tells us, speaking of the calpullis, which are now wards of Tepoztlán, that they tend to include

X618 groups of uninterrupted family lines which trace their descent through the father's line. (Redfield, R., 618 1928, p. 294). This would not give a unilateral reckoning of kinship if marriages obtained within the same ward, since they would be impossible in patrilineal (or matrilineal) exogamous groups. It can be said that it is more common to follow the father's line in the reckoning of descent, and nothing more.

X618 The certainty of the calpulli's being a clan, joined with: the proofs that they did not have exogamous customs with patrilineal reckoning of kinship through common descent; the slight possibility of their having had matrilineal [customs]; the indications that they had ambilateral reckoning of kinship through common descent; and that they had a tendency to endogamy; these, all together, are arguments for asserting with confidence that the calpullis were clans, ambilateral and with an endogamous tendency, and there is nothing—at least according to the documents which we now have at our disposal—to cause us to think that they were not clans, or that they were exogamous and unilateral.

/p. 70/

Chapter 8

DIFFERENTIAL INHERITANCE OF RANK AND THE CALPULLIS

X618 We still need to find out what was the relation between the clans 565 and the social strata, which undoubtedly occurred among the Tenochcas. We have seen how the calpulli presented ambilateral clan characteristics (kinship through common descent, ambilateral reckoning of this kinship, and a tendency towards endogamy). Let us now see how another of the characteristics of an ambilateral clan also occurred in the calpulli, a characteristic which has brought about its being called "pyramidal" (1): the internal inequality which contrasts with the generally very equalitarian character of exogamous clans. This is of much importance because the principal thesis of one

1. Kirchhoff, P., 1944, p. 11.

X618 of the groups which has studied Tenochcan society is that, as clans
565 were present—which for them were only unilateral and exogamous (see p. 16)—they must necessarily be equalitarian (2). Contrariwise

2. Bandelier, 1877, p. 589; Morgan, 1877, p. 205, etc.

to this it can be demonstrated that there was in the calpulli a great internal differentiation of its members, and that it was not in any way democratic and equalitarian but rather highly aristocratic.

The proofs for making this affirmation are based on various declarations of people who saw how the calpulli functioned shortly after the conquest or who had at hand documents and informants which we today lack. In the first place we know that "the commoners of these wards or calpullec [sic] always have a chief and never wish to be without one, and he must be one of themselves and not from another calpulli, nor a foreigner because they will not allow of it" (3). This

3. Zurita, p. 89.

means for us that the members of the Tenochcan clans always had a chief, who had to be a member of his own calpulli.

This difference between chiefs and the governed people is, of course, always present among the members of all the clans; but the important thing is that this position of head of the calpulli was for life and was hereditary, since it is affirmed that upon the death of the head of the calpulli "they elected another, the most honored, learned and able in his way, and old; and if any son of the defunct is left, they elect him, and they always /p. 72/ choose a relative of the deceased if there be one suitable for the position" (4). In other

4. Zurita, p. 90.

words a chief was elected when the last one died, and preferably, according to this declaration, from his [the predecessor's] family. Although according to the above it appears to have been nothing more than a preference for naming the chief of the calpulli from among the members of the dead chief's family, we find other affirmations which make us see that the belonging to it was not simply a preference but a requisite, since the new chief had to be a lord

X 618 565

(5), that is, must have had a rank prior to the fulfullment of his post.

5. Zurita, p. 89, 90.

Very well, in what did this rank consist? Certainly in having a determined inheritance as we have already seen when speaking of social stratification (see p. 26, 27) and as can be gathered from the affirmation that the heads or major relatives of the calpullis could trace their families back to very ancient times (6), which implies that they

6. Zurita, p. 86.

had ancestors who were very similar to themselves, possibly also lords as a consequence. Furthermore, during the migration the calpullis came guided by captains (7) and among them came nobody of much

7. Gómara, II, p. 265; Motolinía, Memorials [Memoriales], p. 5.

account save only some lords (8). With this, together with the as-

8. Genealogy and Lineage, [Genealogía y Linaje], p. 248.

sertion that the relatives of the dead chief were preferred, who was himself a lord, and with the certainty that the fact of being a lord was a rank transmitted by inheritance, we are led to believe that the inheritance of clan chieftainship extended—at least through a line of ancestors—back to a very early period. The principal chiefs of the calpullis were members of the families descended from nobles of his own calpulli. That is, they were strongly aristocratic.

But we have to take into account that the calpulli was ambilateral and that inheritance was determined through both lines. What happened then with the inheritance of lords in the maternal line? On one hand we are told that the daughters of lords usually married persons from distant places (9), who generally were well-to-do (10). On the other

9. Anonymous. A note in different handwriting on page 109 of Zurita.

10. Muñoz Camargo, p. 78.

X618 565

hand, and referring concretely to Tenochtitlan it is affirmed that the lords of the wards gave as many as twenty daughters to Acamapichtli so that he would have descendents by them, and that from Acamapichtli and the daughters of the lords, came the majority and the best heritages of this land (11). With all /p. 77/ this we can accept that at

11. Gómara, II, p. 273.

least in some cases, one of the lines of descent of the calpullis' lords —the maternal line—had the same heritage as the lords of Tenochtitlan. And it is even possible that in each case—remembering that in the ambilateral clan one always attempts to improve the lineage through both lines—preference would be given for the succession to clan chieftainship to sons born of the daughters of the calpulli chiefs and of the rulers of Tenochtitlan since the lords had as successors the sons of the principal women to whom they were married (12). It could perfectly well happen that the most noble woman to

12. Zurita, p. 74; Pomar, p. 25.

whom the chief of a calpulli was married, were the daughter of the marriage between some ruler of Mexico and some one of the daughters of the lords of the corresponding calpulli. We can say, nevertheless, that the chief of the calpulli did not necessarily have to be the direct and immediate descendent of the chiefs of Mexico since once having acquired his inheritance through one person, this person transmitted it automatically. We know moreover in this regard that the pipiltzin "which word means lords—are grandchildren and greatgrandchildren of the rulers" (13). It could well have been as a consequence that

13. Zurita, p. 91.

the chiefs of the calpulli had through one line, that of the father, the heritage of the predecessors of their own calpulli, and through the other, that of the mother, the heritage, perhaps distant, of the rulers of Mexico.

The ties of the lords of one calpulli with the lords of other calpullis, and especially with the rulers of the whole Tenochcan group

/p. 73/ SCHEMATIC PICTURE OF THE
SOCIAL ORGANIZATION OF TENOCHTITLAN

The closeness of each person to his predecessors of clan, sub-clan, group of clans, or tribe is represented in the diagram by the closeness to the vertex of each pyramid. This closeness determined his rank. The diagram also shows the relative rank of each group of relatives as a whole according to their closeness to the vertex of the corresponding pyramid.

9-Monzon--79 E-4 (no date) 1949 NU7 Aztec NU7

DIAGRAM OF THE KINSHIP OF THE TENOCHCAN RULERS

THE ROMAN NUMERALS INDICATE THE ORDER IN WHICH THEY WERE TOATOANIS OR SUPREME CHIEFS.
(a) INDICATES THEY WERE TLACATECATL
(b) INDICATES THEY WERE TLACOCHCALCATL
(c) INDICATES THEY WERE CHIUACOATL

1. THE DATA WERE TAKEN FROM VARIOUS SOURCES, PRINCIPALLY FROM THE CHART OF ADRIÁN F. LEÓN M. THE DIVERGENCES WITH OTHER SOURCES DO NOT INVALIDATE THE OBVIOUS CONCLUSION THAT THE PRINCIPAL TENOCHCAN RULERS WERE RELATIVES.

X 618 565 —who also had their calpulli as we have seen—obliges us to think of differences in rank between the calpullis themselves: a thing furthermore which we had already encountered on speaking of the division of labor by calpullis (see p. 49). We can obtain data to complement the above and see what the situation was in this respect. The most [443] noble clan would undoubtedly be the clan to which the rulers of the entire Tenochca group belonged, who were always related by marriage (see the Table of Tenochcan rulers), and of this still more noble would be the tlaxilacalli of the very tlatoani; and even more, the most noble family would be the tlatoani's own family.

We have seen that not all the calpullis had a calmecac ("place of the lineage of the house" and a school for nobles) but that there were only six. Acosta also confirms this for us (14). The meaning of this

14. Acosta, José de, p. 89.

is very clear: certainly these six calpullis were more noble than the other calpullis. One of them would be that one already cited as the most noble; but the five remaining would be others in a position surely inferior but which followed it in rank. The rest /p. 78/ of the clans would surely have an inferior position to these five clans, forming as a whole a true pyramid of clans of different categories, rank or nobility.

We are also told that each one of the four large "wards" had a chief, as did each one of the calpullis (15). As we have seen also

15. Torquemada, I, p. 294.

that the chiefs of each campan were related to the other members of their campan (see p. 32) we can suspect the existence of a calpulli more noble than the others in each campan—four in all—which very probably were the four which had a calmecac. What is more, the campan where the most noble calpulli of the whole Tenochcan group was, would surely be more noble than the other three. The Tecuhtlis possibly were the most noble members of Tenochtitlan of each campan, who were paid tribute by the members of the Tenochcan group, but were foreign to their clan, like the tlacatecatl, the tlacochcalcatl, the tlatoani, etc., whose functions were very different but were connected to the life of the whole of the Tenochcan community.

X618 565 A schema can be made in which appear: the stratification of the campan in all Tenochtitlan, the stratification of calpullis in each campan, the stratification of tlaxilacallis in each calpulli, and finally the most noble family within each tlaxilacalli. It is an essentially clan like organization, although unitary. The calpulli resembles a cell of Tenochtitlan but Tenochtitlan probably had only about twenty such cells. Neither the social division of labor, nor territorial division, nor the ownership of land, nor social stratification by themselves completely explain this situation. However, it appears relatively simple if we consider it as a clan organization based on the difference of rank derived from the proximity of each one of the members of the Tenochcan group—to his calpulli ancestor, to his campan ancestor and to the common ancestor of the whole Tenochcan group.

/p. 79/

Chapter 9

THE POSSIBILITY OF OTHER INTERPRETATIONS

X618 The fact that all the inhabitants of Tenochtitlan belonged to calpullis, that the calpullis evinced all the characteristics of ambilateral clans with endogamous tendencies and "pyramiding," and that the ownership of land, the social division of labor, territorial division and social stratification were determined by the existence of these clans indicates to us that the society which the Spanish found in Tenochtitlan was "still" a society based on kinship through common descent, but with many traits of an economic character. There were of course relationships rising out of economic production: commerce, slavery, etc.; and it is certain that the social organization of Tenochtitlan was so complex because of the necessities which arose as much from the internal organization of an agricultural community with techniques of horticulture, with fertilization, irrigation, etc., as from the organization of a veritable empire, such as the Tenochcans had, and which included possibly communities with an economy based on irrigation, terracing, etc. (1) such as happened on a large scale in the typical

1. Armillas, Pedro, 1947.

oriental societies of the old world. But in any case it appears that in Mexico the social organization still did not exceed the limits imposed by the existence of groups corresponding to one of the clan types.

X618 It appears, after all, that the doubts concerning whether the Tenochcas had clans or whether they had exogamous clans, derives solely from some investigator's limitation in their concept of clan, which did not include every organization based on kinship through common descent. It is useful, nevertheless, to make a few comments on the reasons which have been given in holding other positions.

X618 171 All the data which we have analyzed fit well within this scheme which I propose for the Tenochcan society, and, according to what I have found out, also the majority of data on this society which are not presented here fit into this scheme. I believe also that /p. 80/ many of the Meso-american groups (2) fit into a similar scheme,

2. Kirchhoff, P., 1943, p. 101E

even when many investigators tell us that there were "something like castes" among peoples like the Huaxtecs, Mixtecs, Zapotecs (3),

3. Radin, P., 1931, p. 1, 2.

and Tarascans (4), probably because all, and above all these latter,

4. Beals, R., 1932, p. 469, 470.

had endogamous marriages. It has also been said that among the Tenochcas there are traces of caste system, for the same reason (5).

5. Moreno, M., 1932.

It must be said that in reality it resembles it, through frequent endogamy. But various characteristics are lacking among the Tenochcas and certainly also in all these groups to characterize them as organized in castes: the calpullis (or the corresponding organisms with endogamous tendency in the other groups) must have been made up of a very small number of people, whereas castes appear to be true tribes subdivided in exogamous or endogamous clans (in various castes). Among the Tenochcas (and surely among the other tribes) the typical priest and warrior castes were lacking (which in Tenochtitlan belonged to different calpullis). Also in Tenochtitlan there was a certain freedom for individual development which does not exist in typical caste societies, and the social division of labor

Y618
171

by calpullis was not very strict. Furthermore it must be said that the term "family" used by some investigators to refer to ambilateral groups, would better be left for groups of affinal and consanguineal relatives consolidated by marriage, and not for groups of people united by their kinship through common descent which is basic in clans. The Otomis also had groups resembling the calpullis (6) and their so-

6. Carrasco, Pedro, 1945, p. 86.

cial organization certainly was similar to that of the Tenochcas. With respect to the Mayas, Roys tells us that there were exogamous clans (7) and at the same time that there were social classes and that

7. Roys, R., 1945, p. 67.

the nobles reckoned their descent through both lines (8). Therefore

8. Roys, R., 1945, p. 33.

I think that, at least among the nobles, there were also groups of the ambilateral clan type.

All these groups fill geographically the gap left in Mesoamerica by Olson (9) and Beals (10) in their maps which include all the groups

9. Olson, R., 1933.

10. Beals, R., 1932.

about which it was possible to acertain that they had exogamous clans, all of which endorses the position maintained in this /p. 83/ work, as regards the Tenochcas, as well as regards these other groups which appear to be similar to them.

Another of the generally accepted arguments against the thesis that the inhabitants of Tenochtitlan had clans consists in the assertion that the latter had disappeared a long time before the arrival of the Spanish (11). But if we analyze the authority which they invoke

11. Hernández, Régulo, 1931, p. 60; and Freund, Georg, 1944.

9:Monzon--84 E-4 (no date) 1949 NU7 Aztec NU7

X618
171

Concerning these tribes data is mentioned which leads us to believe that they had clans of the calpulli type. Perhaps the intermediate linguistic groups also had them. The boundaries marked are linguistic, based on the Map of Prehistoric Distribution [Mapa de destribución prehispánica...] by W. Jiménez Moreno and M. Othón de Mendizabal (1939).

/p. 81/

MESOAMERICAN TRIBES WHICH POSSIBLY HAD AMBILATERAL CLANS WITH ENDOGAMOUS TENDENCY

X618
171

in support of their argument, we find that in the first place it [the authority] does not speak of the Tenochcas and in the second place it does not give a basis for affirming the assumed disappearance of clans, even in the communities to which it refers. These authors base their assertion on a reference that Techotlalatzin, ruler of the Chichimecs, "divided the soil of all the land into parcels in a certain manner and each town, according to the number of people which it had had its population redistributed propotionately; so that if in a Tecpanec town there were six thousand inhabitants, he would take two thousand from there and pass them on to another Metzotec or Chichimec town and from that Metzotec town he would take two thousand inhabitants and move them to the Tecpanec town from which he had brought the others. And if the town had two thousand he would take a fifth and move them on to a another enemy nation and from there he would take the same number and pass them to this other place whence the former had been taken. And the Tecpanec ruler who was of that town whence were taken the two thousand inhabitants, although he did not have them in the same city, recognized them as his own in the other place where they were. And the Culhua, the Metzotec, and the Aculhua rulers did the same thing, so that although he had the same number of people under him, he did not have them all in the area of his rule, but mixed in with others" (12). This cannot

12. Torquemada, I, p. 89.

indicate that the clans had been broken up among the Tenochcas since in the first place the information refers to groups other than the Tenochcas (the Metzotecs, etc.) and only can explain to us or complement other indications; and cannot serve as a basis for assertions of this nature. But there is in addition another argument against the position which we criticize: we cannot say that the Metzotecs, Culhuas, etc., formed, each one, a clan which was then dismembered, it being far otherwise since if there were indeed clans there would be several [clans] in each one of these groups (several among the Metzotecs, several among the Culhuas, etc.). We can add that if what united a ruler with the transferred people was the bonds of kinship, then we are clearly told that they [the clans] were not broken. And finally it must be said that in later cases in which the transfer of people was resorted to, this was done taking into account the "parcel" ["parcialidad"] and "generation" of the transferred

9:Monzon--86 E-4 (no date) 1949 NU7 Aztec NU7

X618
171

people, which probably meant, in general terms, /p. 84/ taking the clans into account. With these data we can find out nothing about the existence of clans, or of those communities, or of the Tenochcas.

It is frequently said that the calpullis were not clans—that is exogamous clans—but rather remains of exogamous clans (13). The

13. Kroeber, A.L., 1923, p. 357, 360; Moreno, M., 1931, p. 14-16; Radin, P., 1937, p. 102; etc.

only prop for this supposition is that the calpullis, being structures which presented some characteristics of the structures based on kinship through common descent, and these not being the same characteristics as those of exogamous clans, then they could not be clans, but rather their remains. I believe it would be extraordinary to find arguments in the sources for Mexican history to prove that the calpullis were remains of such clans. Even now we find many communities which evince characteristics which recall unilateral and exogamous structures (14). But these do not resemble what we know the

14. Pozas, Ricardo, 1945; Monzón, Arturo, 1945.

calpullis of Tenochtitlán were in the 16th Century, nor those of Tepoztlán in the 20th Century in spite of having suffered from the aftermath of the conquest a much more destructive influence than that which the calpullis would have suffered if it is that there were groups in Mesoamerica with a different and more advanced social structure prior to the period of the conquest. Only if there were no indications that the calpullis were ambilateral clans with endogamous tendencies could the possibility of their being remains of exogamous clans be countenanced.

The local restriction of the calpullis has been another argument against the existence of clans in the community which we are studying (15). But this cannot be of value, even as an argument that they

15. Kroeber, A.L., 1923, p. 357, 358, note.

were exogamous clans, since we have innumerable tribes including those with exogamous clans in which individuals of a determined sex

X618
171

are restricted as to locality, which only goes to indicate that their clan organization has influence in determining location. In the case of tribes such as the Maoris, with ambilateral clans, the local restriction applies to both sexes—as with the calpulli—and is certainly no reason for denying the importance of kinship through common descent in their social organization.

The division of labor by calpullis has also been presented as an argument against the thesis that the calpullis were clans (16). The

16. Kroeber, A.L., 1923.

reasoning to combat this position is simple: if the members of a calpulli evinced characteristics of members of a clan, it may be that these clan characteristics determined the social division of labor; but it is not /p. 85/ possible to accept that the social division of labor determined their characteristics of kinship through common descent. As in the case of local restriction, this would mean nothing more than that the clan organization also determined the organization of labor.

The existence of a strong social stratification (17) and of land

17. Kroeber, A.L., 1923; Moreno, M., 1931, p. 29 ff.

ownership (18) are not proofs either against the Tenochcas having

18. Toscano, S., 1946, p. 781.

had clans since we find in tribes the world over cases in which characteristics of ambilateral groups signal the existence of marked social strata such as happened among the Maoris (19) and the Incas (20).

19. Mishkin, B., 1937.

20. Kirchhoff, P., 1942 and 1948.

The argument for the existence of the social strata can be used very effectively against the idea that the Tenochcas had an exogamous clan organization, but it is not proof enough to deny that the bonds of kinship through common descent had great importance in the

X48
171

determination of social relationships, even as basic elements in the form of ambilateral clans with endogamous tendencies and stratified.

The absence of totemism has also been used against the idea that the Tenochcas had clans (21). This is no proof at all because, since

21. Moreno, M., 1931, p. 25.

there are exogamous clans without totemism, the calpullis could even have been exogamous clans (although they were not) without totemism being present.

The similarity between the Greek gens, the Egyptian nome, etc., and the calpulli has also been flourished as an argument against the thesis that there were clans among the Tenochcas (22). But the

22. Moreno, M., 1931, p. 8; Toscano, S., 1946, p. 784.

similarity between these structures would have to be proved, on the one hand, which has not been done; and it would have to be proved, on the other hand, that neither the gens nor the nome had their basis in kinship through common descent, which has not been done either. Moreover, if we take into account that the Greek gens has been considered by many authors as a clan and even that it possibly was an ambilateral clan, the similarity between the calpulli and the gens would reinforce the position that the calpulli was a clan.

Really no proofs have been brought against the very existence of the clans, the most widespread and cogent being the supposed possibility of proving that the social relations of the members of Central Mexican communities, among which was the Tenochcan, stemmed from territorial division, ownership of land, or production of /p. 86/ objects; elements which we have already seen were within the limits of the organization based on kinship through common descent. Also it has been said that the Tenochcan government had the character of a "state" (23). Against this we can only pose two assertions: one

23. Moreno, M., 1931, p. 33; Radin, P., 1937, p. 104.

is that there are sufficient proofs that among the Tenochcas the principal social relationships were based on phenomena of kinship through

X 618 171

common descent; the other is that there are proofs that the social strata of the Tenochca community were not social classes, and that therefore their government could not have the character of a "state" if by this we mean that it had a class and non-"gentile" character.

/p. 87/ CONCLUSIONS

/p. 89/ Chapter 10

THE EVOLUTIONARY STAGE OF TENOCHCA SOCIETY

X 618 178

Let us now see concisely what are the conclusions arrived at regarding the questions posed upon undertaking this investigation in accord with the theoretical possibilities at our disposal; and try to express the evolutionary stage of the Tenochcan society in accord with such conclusions.

Systemizing our data we can say that:

a) The Tenochcas had permanent structures—the calpullis—based on kinship through common descent of its members, that is, structures which possessed the necessary qualities for accepting that there were indications of clans among the Tenochcas.

b) We can also say that, taking into consideration the different forms which clans can assume, the information which we have regarding the Tenochcan clans present them to us as ambilateral clans with endogamous tendencies, among which, through having as a formative principal the reckoning of closeness of kinship to ancestors, there arose a marked internal differentiation, a veritable pyramid of ranks and of economic positions, the highest position being that of the calpulli chiefs.

c) We can say that there are many indications of there having been a differentiation in rank as between entire clans, the principal one being the one to which the chiefs of the whole Tenochcan group belonged.

d) We can say that there are also indications that the internal differentiation of the ranks of each clan is intimately bound to the differentiation between entire clans in the whole Tenochcan group through the realization of marriages between members of different clans.

X 618 178

e) We can say, finally, that there are very numerous indications that the principal social relationships of the whole Tenochcan population were /p. 90/ determined by these ambilateral clan structure types which were greatly stratified and had endogamous tendencies. The more important of these relationships determined by the existence of clans were: 1st) Social stratification which was not independent from the clan organization although it had caused many investigators to think that they were real social classes or the beginnings of social classes. 2nd) The social division of labor, not only manual [labor], which had caused some authors to think that there were guilds among the Tenochcas. 3rd) The forms of land ownership, save two exceptions (the parcels of the valiant macehuales and those of the lords not subject to a determined entailed estate), which had caused it to be thought that the ownership of land was the base of the supposed classic type differences. 4th) The territorial division of the population.

Therefore we can affirm that there were clans among the Tenochcas around the time of the arrival of the Spanish; but that these clans were not of the nature of exogamous and equalitarian unilateral clans which have generally served as examples of clans, but were ambilateral clans with a great tendency towards exogamy and strongly stratified through having as their basic principal the reckoning of the closeness of kinship of their members to common ancestors.

Now then, what does all this mean from the point of view of the evolutionary stage of Tenochca society? There are several considerations that we can make in this respect: in the first place, that the Tenochcas were not in the same evolutionary stage as the Iroquois or other similar groups whose structure is equalitarian and democratic, but rather evinced a marked internal and external stratification and were markedly aristocratic. In the second place we can say that the Tenochcas were not in the same evolutionary line of exogamous clans whose structure does not permit of great development through internal evolution, but rather that the Tenochcas were in an evolutionary line of ambilateral clans which has always been susceptible to undergoing great changes. In the third place we can say that these changes —principally in the tributary system, but also in the clan system were in fact taking place in the society of the Tenochcas and that the more important of them were: a) the beginning of the separation of two hereditary strata—the pillis and the macehuales—of a graded [estamental] type; b) the beginning of the social division of labor by groups of a guild type, c) perhaps the beginning of territorial

X 618 178

division based on personal location—as appears to have occurred with the valiants who were not tributary, and with the owners of alienable land; and d) the beginning of /p. 91/ non-communal and non-alienable property, as was that of the nobles not subject to entailed estates. In the fourth place one must note that the beginning of the evolutionary changes permitted by the structure of Tenochca society formed basically by clans was really hardly a beginning, and that it still had not come to constitute a structure which could even be called graded [estamental] let alone a class type. One also has to note that the premises of productivity of work and of technical advance were not present among the Tenochcas, such as allowed in other parts of the world, the appearance of grades [estamentos] and of social classes, since among the Tenochcas a) there were no great irrigation works or intensive cultivation, although there was a quite advanced hoe cultivation with horticultural techniques (fertilization, selection, etc.); b) machines were absolutely unknown; d) [sic.:c), or c) omitted in printing] there were no domestic animals which might have permitted a great accumulation of wealth, etc. Furthermore there were no possibilities that these technical premises were to obtain in the near future, although they were indispensible for a subsequent evolution. It must also be said that Tenochca life had an economic base of cultivation, of artisan specialization, and of division of labor quite sufficient to allow and require a structure as complex as that which appears in the data, and that the economic relations were of a fundamental importance for the social life of the group; but there is no doubt that they had not come to have sufficient force to break with the limitations of an organization based on kinship through common descent.

Of course, to look at Tenochca society, as has been done in this study, isolated from the groups with which it sustained commercial relations and from those bound to it by tributary relations, achieving almost a parasitic life at their cost, is to see it very fragmentarily. The same can be said as to the lack of a complete study of the whole process of the evolution of Tenochcan society. But precisely because of having found that Tenochca society, in its dominant position, still had not changed its clan structure or even enjoyed an economic well-being that other contemporary groups did not enjoy, reinforces the idea for us that they had not reached a level of evolution similar to the high oriental type cultures of India, Egypt, or China. Furthermore we have to think that in the event that the Tenochca society had continued its evolution uninterrupted by the arrival of the Spanish, it

X, 10:8 178 would have arrived at an evolutionary stage precisely similar to such civilizations, not grounded in great works /p. 92/ of irrigation, but in cultivation by terracing, and by small scale irrigation.

The typical form of the appearance of social classes—that of Greece—is precisely the beginning of the break up of the hereditary limitations of social stratification into grades [estamentos]. In Mexico the falling apart of the clans and the hereditary stratification associated with them began only at the arrival of the Spanish and not through internal evolution but through imposition in a rough manner, and the new social organization spread in a regular and gradual way with the introduction of the new forms of production; the Spanish did not accelerate an internal process already initiated in Tenochca society, rather they introduced forms to which various of the their internal processes could be easily adapted.

CAPITULO I

Teorías sobre la Organización Social de los Tenochca

Este trabajo se refiere a unos aspectos de la Organización Social de los *tenochca*, habitantes de lo que fué la isla de *Mexico Tenochtitlan* [1], según como se presentaba hacia la llegada de los españoles, alrededor del año de 1519.

En 1877 ya se decía, que en relación con su importancia, sobre ningún tema se había escrito tanto como el de los aborígenes mexicanos y la Conquista española [2]. Ahora —setenta años después— ésto se ha agudizado y sobre los habitantes de México, principalmente del Centro del Valle de México, hay una enorme cantidad de obras, de toda calidad y extensión. Ha contribuido a crear esta situación, la atracción que ejerce para el investigador, por una parte, la riqueza cultural del antiguo México, y por otra la inconformidad con el modo en que autores anteriores, de acuerdo con las ideas de su época, han tratado, presentado o interpretado los inconexos y escasos datos a nuestra disposición sobre esta zona en la época que nos ocupa.

El trabajo que aquí se presenta intenta justificarse por las mismas razones. Su Tema —El Calpulli en la Organización Social de los Tenochca— originalmente había sido mucho más ambicioso [3] tratando de dilucidar todas las características de su Organización Social y tuvo que ser reducido por diversas razones. Fué sugerido al autor por los Cursos de Arqueología de México y Centroamérica —dictado por el Lic. Alfonso Caso—, de Análisis de las Fuentes de la Historia de México —dictado por el Profesor W. Jiménez Moreno— y de Organización Social y Económica —dictado por el doctor Paul Kirchhoff—, en los cuales se dio cuenta de que se desconocían

---

[1] El término usado para designar a los habitantes de este lugar en esta época, ha sido tradicionalmente el de *aztecas*. En realidad es un término inadecuado porque incluye otros grupos de otros lugares. El término que por esta razón se utilizará para designarlos será el de *tenochca*, que se puede traducir como habitantes de *Tenochtitlan*.

muchos aspectos fundamentales de la Organización Social de los habitantes de México hacia la llegada de los españoles, principalmente las bases de su Organización, y de que había material histórico y posibilidades teóricas para hacer una reinterpretación, aún contando con una porción tan pequeña de datos a este respecto.

Claro que las bases de la Organización Social de los *tenochca* no es el único aspecto desconocido de una comunidad tan compleja como era la de *Mexico Tenochtitlan*. Los aspectos desconocidos son muchos y de muy diversa naturaleza; pero no presentan la misma importancia para todos los investigadores: unos son fundamentales para quienes tratan de hacer generalizaciones universales [4] y serían las formas concretas que en la comunidad *tenochca* adoptaron las leyes válidas para todas las sociedades. También en la Organización Social de los *tenochca* se puede buscar la trama de acontecimientos, fechas y personas, es decir, los sucesos únicos y notables de la Historia de la comunidad *tenochca*. Y se puede tener interés en encontrar leyes históricas, digamos, los principios que rigieron el desarrollo de los acontecimientos sociales de la comunidad *tenochca* en la etapa evolutiva en que se encontraban hacia la llegada de los españoles.

Con respecto al primer grupo de problemas —los aspectos comunes a todas las sociedades— él autor sostiene la posición de que no es de gran interés científico demostrar que en la comunidad *tenochca* acontecía lo mismo que ha acontecido en todas las sociedades humanas. El segundo grupo de asuntos —los más particulares— tampoco forma el contenido de este trabajo, porque ya se están haciendo por otras personas y le parece urgente que los acontecimientos sociales singulares de nuestra comunidad tengan el tratamiento científico de considerarlos como resultado de las fuerzas sociales que actuaban en la época en que se presentaron. En el tercer grupo de asuntos se incluyen los problemas a que se refiere esta obra: parte de los principios que regían la vida social de la comunidad *tenochca* en la etapa histórica en que se encontraba, sin discutir si ésta era el resultado de una evolución divergente, convergente, o interna, de degeneración, de aculturación, etc.

Los problemas aquí tratados, pueden plantearse en los siguientes términos:

a) Dilucidar si había clanes entre los habitantes de *Mexico Tenochtitlan* hacia la llegada de los españoles, y en caso afirmativo, de qué tipo eran.

b) Dilucidar si existía en esta época una importante estratificación social entre ellos y cuáles eran sus características.

---

[4] Tax, Sol., 1957, p. 3.

c) Dilucidar si hacia la llegada de los españoles sus relaciones sociales estaban moldeadas por uno u otro de estos factores anteriormente citados, o por ninguno de ellos [5].

Con respecto a estos problemas las opiniones de los investigadores —aunque no los hayan planteado exactamente en los mismos términos— se han dividido en dos campos, que hacen afirmaciones completamente diferentes de las cuales ninguna, por sí sola, explica las características que sabemos que tenían los *tenochca*. Unos autores —entre quienes están los que de hecho iniciaron la discusión de este tema— como Bandelier [6] y Lehman [7], básicamente han considerado que en la época a que nos referimos los *tenochca* "todavía" tenían una organización gentil, poniendo un gran énfasis en la existencia de los *calpullis* a los que consideran como clanes exogámicos igualitarios. Otros autores, como Moreno [8], Caso [9], Kroeber [10], White [11], Toscano [12], etc., se han opuesto a ver tales características en la sociedad de los *tenochca* y han tratado —en trabajos especiales o en unas cuanta líneas— de demostrar la falsedad de este punto de vista, sosteniendo que los *tenochca* de esta época ya no tenían una sociedad gentil, poniendo gran énfasis en la existencia de sus estratos sociales, en su comercio organizado, en sus guerras de conquista, etc., y consideran que el *calpulli* era simplemente una división territorial u otra cosa, pero no un clan.

Estas dos posiciones en cierto modo se complementan, pero en realidad se excluyen en la forma en que han sido presentadas, no pudiéndose simplemente reunir para tener una idea de lo que acontecía en el Valle de México hasta la llegada de los españoles, como lo hacen algunos otros autores que realmente sostienen un tercera posición, como Vaillant [13], Thompson [14], Murdock [15], y en cierto modo Acosta [16], que presentan a la socie-

---

[5] Dilucidar el tipo de Gobierno —como manifestación y prueba de la existencia de un determinado tipo de Sociedad entre los *tenochca*— es indudablemente un problema que se puede resolver separadamente después de conocer la Organización Social básica: no se trata en este trabajo, sino en cuanto ayuda a resolver los otros problemas.

dad de los *tenochca* al mismo tiempo con clanes exogámicos y fuertes estratos sociales, ambos con igual o muy semejante importancia, o con clanes exogámicos en transición por evolución interna a una sociedad de clases sociales.

Lo más notable es que todos estos investigadores han llegado a conclusiones tan diferentes trabajando aproximadamente con los mismos datos y consultando las mismas fuentes, y aún uno de ellos —Bandelier— el paladín de quienes han sostenido que los *tenochca* tenían clanes exogámicos, durante mucho tiempo sostuvo el punto de vista contrario [17] y solamente después de arduas y numerosas discusiones con Morgan llegó a cambiar su posición, aportando, sin embargo, un gran número de argumentos para ambas posiciones.

Para entender esta situación se necesita seguir por lo menos a grandes rasgos, el proceso de la discusión que a primera vista parece girar solamente alrededor del uso de ciertos términos. La discusión fué iniciada por Bandelier [18], pero realmente no es él quien plantea el problema de dilucidar las bases de la Organización Social de los *tenochca*, sino que es Morgan, y a él tenemos que recurrir para entender el origen y el desarrollo de todas estas posiciones. Morgan —entre otras cosas de diverso valor— hizo el descubrimiento de que las formas sociales se podían ordenar en una línea evolutiva, y que haciéndolo así se veía una correlación entre las características de los inventos y de los descubrimientos y las Instituciones Humanas, apareciendo en el curso de la Historia Humana dos planes de Organización sucesivos: uno basado en las relaciones personales de parentesco ("societas") y otro basado en el territorio y la propiedad [19] ("civitas").

Aunque ya desde antes de la obra de Morgan se hablaba de la diferencia entre los lazos originados en el parentesco y los originados en la ubicación territorial [20], realmente es Morgan el que da un sentido a esta distinción, haciendo resaltar la importancia concreta que para cada comunidad tiene el que sus bases estén en fenómenos de parentesco por ascendencia común o en la división territorial y la propiedad de la tierra, y la diversa situación en que según ésto queda colocada, dentro de la evolución humana. Morgan propuso un esquema evolutivo de todas las sociedades humanas, incluyendo en él a comunidades con costumbres exogámicas matrilineales

---

[17] Bandelier, en White, L., 1942, I, Introducción.

[18] Desde un punto de vista científico no vale la pena tomar en cuenta la concepción feudalista de los conquistadores, aunque tengamos que aprovechar sus datos forzosamente.

[19] Morgan, L. H., 1877, p. 54, etc.

[20] Maine, 1861, cit. por Lowie, R. H., 1937.

como un primer estado evolutivo, comunidades con costumbres exogámicas patrilineales como un estado evolutivo posterior, comunidades claramente basadas en la propiedad de la tierra y la división territorial como un estado aún superior, y comunidades que él consideraba que estaban en transición entre estos pasos de una evolución unilinear [21]. Aunque tampoco es Morgan el primero que habló de comunidades con costumbres exogámicas, pues ya desde antes se conocían [22], sí es Morgan el primero que trata de sistematizarlas como formas especiales de la Organización Social basada en el parentesco por ascendencia común, y de dar una explicación de su origen y de su evolución desde una sociedad basada en la sistematización de las relaciones sexuales hasta que aparece la sociedad basada en la propiedad de la tierra y la distribución territorial, al mismo tiempo que trata de demostrar que hay una íntima relación entre los diversos aspectos de la cultura que presentaba cada período evolutivo. Por otra parte Morgan afirmaba que la Humanidad huía del incesto y que por lo tanto no podían esperarse —como pensaban algunos autores [23]— grupos con costumbres endogámicas, que según su teoría habían desaparecido muy al principio de la evolución social.

El bien ordenado esquema de Morgan con dos tipos fundamentales de sociedades humanas, uno basado en el parentesco por ascendencia común ("societas"), con clanes matrilineales o patrilineales, y otro basado en la división territorial y en la propiedad de la tierra ("civitas") tuvo una gran acogida por muchos investigadores, ya que en realidad introducía por primera vez la sistematización en un material muy extenso cuyo significado evolutivo nadie había intentado en conjunto. Fué un esquema tomado por algunos investigadores casi sin modificaciones, como ocurrió precisamente con quienes han estudiado la sociedad de los *tenochca*, resultando que mientras unos sostuvieron que era una comunidad de tipo "societas", es decir, que estaba basada en el parentesco por ascendencia común [24], otros autores sostuvieron que era una comunidad de tipo "civitas" [25], o que estaba basada en el territorio y la propiedad [26], o que estaba en transición entre estos dos extremos [27], según el énfasis que veían en los datos y que les convencía en uno u otro de estos dos sentidos.

---

[26] White, L., 1949, p. 33, 35, etc.
[27] Azueta Saignes, M., 1945, p. 21.

De hecho el descubrimiento de que las formas sociales podían ordenarse en un sentido evolutivo puede considerarse como un adelanto definitivo en las ciencias sociales, aceptado por la mayoría de las Escuelas aunque concebido de un modo que difiere del morganista típico [20]. Lo mismo puede decirse de la existencia de dos tipos de sociedades fundamentalmente diferentes [20]. Pero hay que aceptar que algunas de las afirmaciones de Morgan —que fueron hechas con datos relativamente escasos y en un primer intento de abarcar todos los conocimientos sobre las sociedades humanas—, con el curso de nuevos estudios se han considerado inexactas —y de seguro lo son— y que hay nuevas adquisiciones teóricas y nuevos descubrimientos, que de seguro deben ser tomados en cuenta para entender la Organización Social básica que tenían los *tenochca* hacia la llegada de los españoles.

Quizá entre las más importantes modificaciones a la obra de Morgan está el aceptar que el esquema de la evolución unilinear de la sociedad humana —que había sido rechazada en el principio de las investigaciones en estos terrenos [20]— es un esquema de seguro ya sobrepasado [21] y que debemos pensar en la posibilidad de ramificaciones evolutivas, en evolución interna, aculturación, degeneración, etc., para establecer un esquema correcto [21a].

Otra de las adiciones importantes a la obra de Morgan es la hecha por Engels, quien aceptando el esquema de Morgan, recalca que en realidad las diferencias entre los tipos de comunidades "societas" y "civitas" estriban más bien en que las primeras tienen su base en la sistematización de la producción sexual, es decir, en la reproducción ("gentiles"), en tanto que las segundas están basadas en la producción de objetos, es decir en la producción económica ("políticas") [22]. Esta es una adición muy importante, aunque este autor y los que le siguieron en sus ideas aceptaron también la idea morganista de que las sociedades basadas en el parentesco solamente podían ser unilaterales y exogámicas, y aceptaron también la idea de que en términos generales la evolución social era unilinear. Algunos autores criticaron el modo de ver la evolución social que tenía Engels al introducir fenómenos de la producción sexual como base de un tipo de sociedades e hicieron sistemati-

zaciones de la evolución social de la Humanidad considerando que toda puede explicarse por la producción económica [32]; pero parece que esta es una regresión teórica sobrepasada por Engels mismo [33], al tratar sociedades relativa o realmente primitivas.

Otra modificación de importancia a la obra de Morgan se refiere a que las sociedades más primitivas —y existentes todavía en la época moderna— presentan una organización más simple que la organización clánica, con macro-familias, frecuentemente con matrimonio monogámico, sin restos de promiscuidad ni de matrimonio por grupos [34]. En relación con esto no pudo considerarse aceptable la afirmación de Morgan de que los kamilaroi y los hawaianos (y grupos como ellos), representaran la misma situación social ni la forma más antigua de organización [35], habiéndose encontrado grupos de seguro más primitivos y grandes diferencias entre ellos.

Por otra parte no pudo probarse la supuesta evolución de los clanes matrilineales a los patrilineales, que apareciendo como complejos distintos, aunque relacionados, en casos concretos no podían ser sucesivos [36]. Además se vió que algunos de los grupos que Morgan consideraba en transición de costumbres matrilineales a costumbres patrilineales y otros con costumbres matrilineales, presentaban en muchos aspectos una superioridad notable en relación con los que tenían costumbres patrilineales (hacia donde estarían evolucionando), que era inexplicable en sus apariciones sistemáticas si se aceptaba la sucesión de clanes matrilineales a patrilineales como un paso forzoso de evolución general [37].

Con respecto a las modificaciones a las ideas de Morgan sobre los tipos de clanes hay una situación muy compleja: por las razones de los párrafos anteriores, la mayoría de los investigadores conectados íntimamente con la Etnografía en tribus de cultura primitiva abandonaron casi en su totalidad las ideas de Morgan y aceptaron explícitamente sólo su sistematización de las terminologías de parentesco. Sin embargo, posiblemente están bajo la in-

---

[32] Cunow, 1926.

[33] Antes de que Engels y otros investigadores de esta corriente aceptaran la sistematización social propuesta por Morgan, Carlos Marx había propuesto una sistematización de las sociedades humanas en cuatro tipos: Asiática, Antigua, Feudal y Moderna, basándose principalmente en las características de la producción económica (Marx, C., 1859, p. 11). Desde este punto de vista Marx estudió ampliamente la Sociedad Moderna (la Capitalista) y recientemente Wittfogel la Sociedad Asiática, a la que prefiere llamar Oriental (Wittfogel, K. A., 1928).

[34] Kroeber, F., 1932, p. 180; Schmidt, W., 1922, p. 142 ss.

[35] Lowie, R. H., 1937, p. 75.

[36] Lowie, R. H., 1937, p. 78.

fluencia de Morgan, al aceptar la distinción entre un tipo de sociedades basadas en el parentesco por ascendencia común y otro en la propiedad de la tierra y la distribución territorial. Y sobre todo es seguro que están bajo la influencia de Morgan al aceptar en términos generales que los únicos organismos posibles con base en el parentesco por ascendencia común tienen que ser unilaterales, idea que es muy común entre los antropólogos [38], aunque desde antes de la obra de Morgan se hablaba de grupos endogámicos (v. nota 23 de este capítulo) que tenían muchas semejanzas con los clanes y parecen estar basados en el parentesco, pero no son exogámicos. Ahora bien, a este respecto hay un estudio que hace una contribución de gran importancia a las ideas de Morgan y que puede aceptarse sin abandonar una posición evolutiva y aceptando que las bases de la Organización Social son la producción sexual y la producción económica en diversas etapas de la Historia: es el descubrimiento de P. Kirchhoff de que no ha habido grupos estrictamente endogámicos como pensaban estos autores [39], pero que por otro lado sí hay grupos basados en el parentesco por ascendencia común, que contrariamente a lo que pensaba Morgan, no son unilaterales ni exogámicos, sino ambilaterales y tienen una tendencia endogámica [40]. El clan, según estas ideas, tiene como principio el ser un organismo basado en el parentesco por ascendencia común, y no el ser unilateral y exogámico. Se puede definir así el clan como (1) un grupo de personas, (2) organizado en forma permanente, (3) al que se pertenece por ascendencia real o supuesta y excepcionalmente por adopción, (4) que regula las relaciones de casamiento, y —agregaría el autor— (5) que determina otras relaciones sociales donde se presenta. De acuerdo con el punto (3) de esta definición se pueden clasificar los clanes en dos tipos: unilaterales, si los miembros del grupo cuentan su parentesco por ascendencia común solamente a través del padre (patrilineales) o solamente a través de la madre (matrilineales); y ambilaterales si los miembros del grupo cuentan la cercanía de su parentesco con sus antecesores a través de individuos de cualquier sexo. Con el punto (4) de la definición de clan se pueden clasificar los clanes en exogámicos, si existe la prohibición de los miembros del clan de realizar casamientos entre sí, y no

[39] Además de los autores citados en la nota 23, Wasterman (1917, p. 273) piensa en la posibilidad de que el *calpulli tenochca* fuera un clan endogámico, sin que esto signifique una estructura muy especial; y Linton (1943, p. 238-239) habla también de clanes exo y endogámicos, estos últimos con interés en la propiedad y el privilegio.

[40] Kirchhoff, P., 1944, p. 6, 8, 10.

exogámicos o con tendencia endogámica, si existe la tendencia a realizar casamientos dentro del mismo clan; a estos últimos se les podría llamar endogámicos si presentaran una endogamia estricta —como presentan la exogamia los clanes del tipo exogámico— pero el presentar solamente una tendencia endogámica ha hecho que el autor de esta clasificación (Kirchhoff, P.) prefiera esta denominación. Se ha encontrado que los clanes llamados unilaterales en general son exogámicos y que a su vez los clanes ambilaterales son no exogámicos, por lo que los términos correspondientes pueden usarse casi indistintamente. Además los clanes exogámicos se presentan en sociedades bastante igualitarias —como la de los iroqueses—, mientras los clanes con tendencia endogámica presentan una marcada estratificación social, que arranca del principio formativo del clan de este tipo: la cercanía de cada miembro del clan al ancestro común, lo cual resulta en toda una gama de rangos dentro de cada clan, y aún dentro del conjunto de la tribu, en donde se reproduce la situación. Por otra parte Kirchhoff da el nombre también de clanes a los grupos no-exogámicos y ambilaterales —aunque el término no tiene este uso generalizado—, porque muy posiblemente los grupos que dieron el nombre de clan a los organismos sociales basados en el parentesco por ascendencia común —igualmente que los que se llaman sib o sippe— eran, paradójicamente, ambilaterales, y tenían tendencia endogámica. De acuerdo con el punto (5) de la definición de clan podríamos decir solamente que si los grupos de parientes por ascendencia común son de importancia en una comunidad debemos hablar de clanes, y si no, de sus restos, de sus vestigios, etc.

También con respecto a las características que muestran los estratos sociales se han hecho modificaciones de importancia, que no contradicen la posición básica de Morgan y de Engels sobre la existencia de la evolución social y sobre la existencia de bases consanguíneas o económicas de la Organización Social. Son adiciones que no fueron tomadas en cuenta al hacer otros estudios sobre la Organización Social de los *tenochca*; consisten principalmente en la delimitación de tres fenómenos: clase social, estamento y casta. En algunas sociedades con determinada evolución social, se presentan los estamentos, que son estratos sociales formados por las personas de una comunidad con posición social y económica semejante, que no son parientes entre sí, pero que pertenecen a su estrato por herencia, por lo que estas sociedades muestran poca movilidad interestamental [41]. En otras sociedades muy avanzadas los estratos sociales son verdaderas clases sociales: estratos antagónicos de una comunidad cuyo papel social está determinado por

[41] Mombert, P., 1944.

la posesión de medios de producción básicamente diferentes, pero complementarios, como son la tierra, los instrumentos de trabajo o la simple fuerza de trabajo personal [42], y en los que hay una gran movilidad interclasista [43]. Hay otras sociedades que muestran castas: como carecemos de una definición de casta en términos de parentesco y de economía, (pues se les considera a veces como clanes pero endogámicos tentativamente [44]), se propone aquí —también tentativamente— adoptar como definición de casta el ser (1) subdivisiones de una sociedad, (2) con gran tendencia endogámica, (3) a las que pertenece por nacimiento, (4) que determinan automáticamente el rango de todos los miembros de la sociedad y (5) que determinan el papel de cada individuo en la división social del trabajo [45].

En este trabajo se ha intentado únicamente dilucidar si la Organización social de los *tenochca* tenía bases en fenómenos de parentesco por ascendencia común, a la luz de las anteriores adquisiciones teóricas, para intentar explicar su funcionamiento y su lugar dentro de la indudable evolución social de la humanidad. Ha quedado fuera de este trabajo la discusión de relaciones sociales surgidas directamente de la producción económica, como son el comercio [46], la esclavitud [47] y la Organización del Imperio, fundamentalmente basado en la tributación de grupos no emparentados con los dominadores. Estas son partes muy amplias de la Organización Social de los *tenochca* y muy importantes; pero pueden ser dejadas a un lado al tratar nuestro problema porque se pueden considerar seguramente como formas derivadas de una estructura fundamental. Tampoco se intenta en este trabajo describir todo el funcionamiento de la Sociedad *tenochca*, ni de discutir todas las posiciones que se han adoptado con respecto a diversos aspectos particulares de su organización social: son tantas y tan intrincadas que la discusión constituiría muchas tesis como la presente; se han tratado solamente algunas que me parecen principales para la discusión del tema central. Así, este trabajo se limita a dilucidar si entre los *tenochca* había clanes y cuáles eran las características de los estratos sociales: en la Primera Parte está una exposición de los datos que han permitido pensar a ciertos investigadores

---

[42] Marx, K., 1909, p. 1054.

[43] Mombert, P., loc., cit.

[44] Forde, D., 1934, p. 273; Kroeber, A. L., 1944.

[45] Es una definición tentativa obtenida a través de pláticas con el Dr. P. Kirchhoff.

[46] A este respecto hay un interesantísimo trabajo de Acosta Saignes, Los Pochteca, (1945) y su Tesis sobre el mismo tema.

[47] Véase el Trabajo de Bosch, Carlos: La Esclavitud Prehispánica entre los Aztecas (1945).

que los *tenochca* tenían clases sociales. En la Segunda Parte se intenta demostrar que en la sociedad de los *tenochca* existía un organismo basado en el parentesco por ascendencia común, un clan ambilateral, por naturaleza fuertemente estratificado: el *calpulli*, y que los fenómenos que nos harían pensar que la sociedad de los *tenochca* era clasista tienen su explicación en la existencia de grupos de este tipo.

Las Fuentes consultadas para obtener datos que sirvieran de base a mis conclusiones son prácticamente las mismas utilizadas por Bandelier y Moreno, M., a las que se agregaron unas cuantas puestas al alcance de los investigadores posteriormente. Las fuentes consultadas naturalmente son muchísimas más que las fuentes utilizadas y citadas, porque en realidad hay una enorme falta de datos respecto a los problemas que trato en este trabajo. Hubo que utilizar algunos datos de otras regiones (*Tlaxcalla, Texcoco,* p. ej.), para completar algunas informaciones y hubo necesidad de utilizar datos de épocas muy posteriores a la que se trata de reconstruir en este trabajo; pero ésto fué imposible de evitar. Para normar el criterio con respecto a la validez de sus informaciones consideré que los documentos inmediatos a la conquista de México describen la situación de la Nueva España con algunos errores: 1º—Las limitaciones en las indagaciones y en las informaciones, porque ni los cronistas ni los informantes tenían una preparación especial, 2º—El acento dado a ciertos asuntos por el modo como los informantes o los informados los veían, según sus intereses, 3º—La dificultad que tenían los españoles para entender a una sociedad tan diferente de la suya en algunos aspectos y tan semejante en otros, 4º—La dificultad que tenían los informantes en analizar su propia sociedad. La mayoría de los datos que no podían considerarse como resultado de la influencia española fueron tomados como restos de situaciones anteriores a la conquista española. En todo caso el principal criterio de veracidad fué la congruencia presentada por los datos mismos. Esto último principalmente al manejar datos de obras muy posteriores a la Conquista o de autores que no vieron a México en esta época —Acosta, Torquemada, Clavijero, Gómara, etc.— pero que tuvieron a mano informes y documentos de que ahora carecemos, o que vieron restos aún poco modificados de la antigua Organización Social de *Tenochtitlan*.

La forma retorcida que muestran algunos razonamientos, proviene principalmente de la necesidad de aprovechar los pocos datos sobre el tema, que no son siempre específicos, ni categóricos, sino que se refieren a rasgos culturales secundarios, o derivados; pero que sugieren una situación básica, sin la cual no hubieran podido presentarse.

LA IMPORTANCIA DEL CALPULLI

[p. 21]

[p. 20 is blank]

[p. 22 is blank]

CAPITULO II

Estratificación Social

En las fuentes de la Historia de México encontramos datos que indudablemente muestran la existencia de la estratificación social entre los *tenochca*, y que han permitido a algunos autores pensar que los *tenochca* tenían clases sociales. Estos datos son de muy diversa naturaleza y muy abundantes, pero aquí solamente se van a presentar los más significativos: la división entre trabajadores manuales y directores, la tributación, la diferenciación en el nivel de vida, la relación entre los estratos y los *calpullis* y la herencia de la pertenencia a un estrato determinado.

Con respecto a la división del trabajo encontramos una gran diferencia de actividades entre dos tipos de gentes: unas que realizaban trabajos manuales y otras, labores esencialmente directivas. Se nos dice que los *macehuales* eran la gente común y labradores [1] y que se dedicaban a sus oficios [2], es decir, eran trabajadores manuales. En cambio que los *pillis* y los *tecuhtlis* tenían como ocupaciones "servir en la guerra y oficios públicos de gobernadores y ministros de justicia... escuderos... mensajeros... llevar a las sementeras o a otras cosas que se hacían en común o para sus fiestas y servicio del señor" [3] y "mirar por las tierras del *calpulli* y defenderlas (y tener) pintadas las suertes que son, y las lindes, e a donde y con quien parte términos y quien las labra, e las que tiene cada uno y cuáles están vacas... y quien e cuando e a quien se las dieron" [4] y cuidar "que no se les entren en ellas" [5], y tenían "cuidado de amparar a la gente del *calpulli* y hablar por ella ante los gobernadores" [6], es decir, que los *pillis* realizaban trabajos fundamentalmente directivos o coordinadores [7]. Con estos datos podemos afir-

[5] Zurita, p. 88.

[6] Zurita, p. 90.

[7] Con referencia a *Tlaxcalla* nos dice Muñoz Camargo (p. 105), que los *tecuhtlis*

mar que entre los *tenochca* se presentaba una fuerte diferenciación con respecto al trabajo: había personas que realizaban trabajos manuales y personas dedicadas a labores directivas. Estas últimas, por otra parte, aparecen en nuestros datos fuertemente relacionadas con el *calpulli*.

La diferencia en la división social del trabajo que hemos visto en el párrafo anterior tenía posiblemente como manifestación principal la posición con respecto a la tributación: unos eran tributarios y otros eran tributados. Se nos dice a este respecto que "los pobres *macehuales* todo el día trabajan para sus tributos y para darles de comer a ellos (a los principales); porque en un pueblo de mil vecinos hay un cacique y cien principales en quien el pueblo está repartido por barrios... y estos comen y beben y huelgan a costa de los pobres labradores (o *macehuales*, como ya vimos) que lo sustentan todo; y esta es orden muy antigua en todas las provincias de la tierra" [8], (es decir, también en *Tenochtitlan* y no por influencia española). De nuestros datos resulta, primero, que los principales serían aproximadamente un diez por ciento de la población, y además, la división entre personas tributadas —las que realizaban labores directivas— y personas tributarias —las que rezlizaban trabajos manuales—, y por otra parte resulta nuevamente la relación entre esta estratificación social y la división territorial, sólo que ahora con respecto a la tributación: los principales tributados eran de barrios. Todo se confirma en otras fuentes: se nos dice que los *macehuales* a su "principal o cabeza (de *calpulli*) le labraban una sementera para su sustento y le daban servicio conforme a la gente que había en el barrio" [9]. Otro autor nos dice que los viejos decían "que a sus señores naturales y legítimos la gente común tributaba en hacerles sus casas y sementeras... y lo mismo hacían a sus principales" [10]. Con todo lo anterior resulta indudable la tributación dentro del mismo grupo *tenochca* como un carácter diferencial de dos tipos de gentes, y la existencia de la relación entre esta estratificación y los barrios. Resulta también de nuestros datos que además del tributo a los principales había el tributo a "los señores", a "los caciques" lo que probablemente quiere decir a los jefes de todo el grupo, no sólo de los barrios.

---

y *pillis* "son estimados como hombres calificados, que aunque sean pobrísimos no ejercen jamás oficios mecánicos ni tratos bajos ni viles. Jamás se permiten cargar, ni cavar con *coas* ni arados, diciendo que son hidalgos e que no han de aplicarse a estas cosas soéces y bajas, sino de servir en guerras y fronteras". Era de seguro lo que acontecía también en *Tenochtitlan*, aunque desgraciadamente para este lugar no tenemos ninguna afirmación tan clara.

[8] López Gerónimo, II, p. 151. Aunque afirmación de un connotado esclavista, es utilizable y sistetiza muchos datos aislados.

[9] Zurita, p. 142.

[10] Anunciación, p. 237.

Es seguro que como resultante del papel en la división del trabajo y de la distinción entre ser tributario y ser tributado, se forjaron en *Tenochtitlan* grandes diferencias en el nivel de vida de la población: los *macehuales* no tenían "ni muebles, ni vestuario, más que el que traen sobre sus personas, que es muy pobre, e una o dos piedras de moler maíz, e unas ollas para cocer e una estera en que duermen... e comen poco... la gente común e plebeyos son tan tiranizados de sus señores indios que a la mayor parte les tasan su mantenimientos" [11]. En cambio se nos dice que los principales y los señores siempre andaban en banquetes y bodas [12] y que los príncipes se acostaban en camas [13] y que tenían los señores y jugaban al azar "piedras preciosas y joyas y oro y plumería, esclavos, mantas de todo género y armas y arreos de guerra" [14]. Todos hemos visto, por otra parte, la diversidad que muestran los códices entre los vestidos y arreos de los *macehuales* y de los principales y señores en ilustraciones sahaguntinas, mendocinas, etc. Son, todos éstos, datos que nos obligan a pensar que había grandes diferencias de riqueza y bienestar dentro de la población de *Mexico-Tenochtitlan* y que se presentaban entre *macehuales* y *pillis*.

Otro aspecto que manifestaba la separación entre las personas de la población era la vida sexual: "los del pueblo dicen que tienen sólo una mujer; pero los principales pueden tener concubinas a su arbitrio" [15], y cuando se casaban "las mujeres principales llevaban consigo otras criadas (y con todas las mujeres tenían ellos)... mucha granjería, porque las hacían tejer y hacer mantas y otros oficios de esta manera" [16].

Estos datos nos muestran no solamente el bienestar implícito en tener una multitud de esposas los principales polígamos, sino también el bienestar económico derivado de esta poliginia, que quedaba fuera del alcance de los *macehuales*.

Ahora bien, esta estratificación parece que también abarcaba a grupos de personas dedicadas a otras ocupaciones que el cultivo, pues se nos dice que los mercaderes también tenían principales, que andaban con los cabezas de *calpullis* [17], lo que nos obliga a pensar que no todos los mercaderes eran

---

[12] López Gerónimo, II, p. 151.

[13] Mártir de Anglería, P., p. 470.

[14] Pomar, p. 27. Aunque referente a Texcoco el dato, coincide con lo que se sabe en afirmaciones menos categóricas, como la del Códice Alcobiz. (Leyes que tenían los Indios).

[15] Mendieta, Historia Eclesiástica, p. 297.

[16] Motolinía, Historia, p. 164.

[17] Zurita, p. 143.

principales y que por lo tanto entre ellos se presentaba la estratificación de que hasta ahora hemos hablado. Complementando y aclarando la situación, sabemos que los mercaderes y los artesanos, aunque cultivaban su tierra, no tributaban en trabajo de labranza, sino en trabajo de su oficio [18], como albañiles, carpinteros, plumajeros y plateros [19]. Aunque no se nos aclara si esta tributación de "mercaderes y artesanos" era con relación a los señores de todo el grupo *tenochca* o sólo a los principales del *calpulli* correspondiente, es muy posible que aconteciera en estos tributarios lo mismo que acontecía con los labradores que ya hemos visto: pagaban a ambos. Todo esto nos hace pensar que la estratificación que existía entre los *tenochca* no era en capas de labradores, de artesanos, de mercaderes y de jefes, sino entre jefes y gobernados, fueran labradores, artesanos o comerciantes. Refuerza esta concepción el que se nos diga que los *pochteca tlatoque* —término que se traduce como los señores de los *pochteca* (o sea, mercaderes)—, no iban a los viajes de los mercaderes, sino que encomendaban sus "mercadurías" para que se las vendiesen y después partían las ganancias [20], es decir, que dentro del grupo se presentaban las diferencias de ocupación que resultaban en una estratificación entre personas qu trabajaban como comerciantes y personas, que por otra clase de labores —directoras, de jefes, de "principales"—, recibían parte de los beneficios obtenidos por "mercadear". Refieren de los artesanos de *Texcoco* que los nobles aprendían también oficios, pero solamente como distracción [21]. De seguro algo semejante acontecía en *Tenochtitlan* y seguramente correspondía a la división entre *pillis* y *macehuales*, en grupos de artesanos.

Conviene hacer todavía algunas aclaraciones con respecto a la división entre *macehuales* tributarios y *pillis* tributados. Una fuente nos dice que aunque los principales tenían muchas mujeres, sólo a una de ellas consideraban mas importante y a sus hijos con ella como herederos de su posición [22]. Aunque el dato no se refiere a *Tenochtitlan*, de seguro era válido también para los principales de este lugar, y así los confirma en parte Zurita [23]. Otro autor nos dice que en casos de rebeldía de los principales, los quitaban y los señores ponían a un pariente cercano, como hermano, en

[18] Zurita, p. 142.
[19] Oviedo, III, p. 335.
[20] Sahagún, I, p. 351.
[21] Pomar, p. 38.
[22] Pomar, p. 25. En realidad Pomar da informaciones contradictorias: "siempre dejan como heredero de su estado al hijo de la mujer legítima", y "al más virtuoso, aunque fuese el menor... (o) de las demás mujeres". Queda sin embargo la herencia paterna como dato común a todos.
[23] Zurita, p. 90.

su lugar, pero no a su hijo [24]. Resulta de lo anterior que el heredero legal del jefe de *calpulli* era en estos casos pariente del anterior, aunque no necesariamente su hijo: posiblemente se puede decir que los parientes del jefe de *calpulli* son principales, que están en posibilidades de ser tributados como jefes si llegaban a ser de esta categoría y que no todos lo lograban. Sin embargo, de seguro gozaban de los tributos al jefe del *calpulli* sus esposas y sus hijos [25].

Se nos dice que en los barrios había otras personas principales además del jefe, como el *telpochtlato* [26] o director del colegio de cada barrio, que seguramente vivía de tributos. Se nos habla en muchas ocasiones de los tributos para los templos (v. p. 42), resultando así tributados también algunos sacerdotes. Pero todavía hay algunos otros datos complementarios muy importantes: por una parte que "estaban exceptuados de contribuciones y de algunas prestaciones... los pintores, que se llaman *tlaculoca* (q. d. *tlácuiloque*)... también los cantores... y los tocadores de instrumentos... los instructores tampoco contribuían..." [27]. Por otra parte sabemos que todos los que contribuían se llamaban *macehuales* [28] y que no contribuían los parientes de los señores y algunos principales [29], de donde podemos inferir que los tocadores, cantores, instructores, etc., que no tributaban eran gente de los señores y principales, y no de los *macehuales*. Aunque tal conclusión no es absolutamente necesaria, ni forzosa.

Hay sin embargo, dentro del esquema de ser los *macehuales* los tributarios y los principales los tributados, algunas excepciones: los que se distinguían en las guerras eran eximidos de impuestos [30], lo que nos obliga a pensar que eran *macehuales* que gozaban de un privilegio que no tenían los demás *macehuales*. De seguro eran estos *macehuales* las personas que se hacían nobles por merced [31], y de quienes no hay datos de que fueran tributados, es decir "nobles", principales por herencia, sino que inclusive no podían tener "terrazgueros" [32], es decir, que no podían vivir de tributos, y

---

[24] Mendieta, Historia, p. 154.

[25] Muñoz Camargo, con respecto a *Tlaxcalla* nos dice que "los mayorazgos por ellos (los *pillis*) vinculados, jamás se dividen, pues solamente eran obligados (seguramente los *macehuales*) a alimentar a todos los parientes y hermanos de aquella casa" (p. 8).

[26] Torquemada, II, p. 220.

[31] Sahagún, II, p. 308.

[32] Torquemada, II, p. 546.

quienes, por lo tanto, como los *macehuales* comunes, labraban personalmente sus tierras: su carácter distintivo era simplemente no tributar. Por otra parte tenemos una contraparte a estos *macehuales* que no tributaban: había principales que caían en un crimen a los que castigaban "condenándolos a muerte", o a destierro o a ser trasquilados o los hacían *macehuales* [83] es decir, que eran *pillis* a quienes se quitaba el derecho a ser tributados y se les imponía la obligación de tributar. Vimos también antes que no todos los principales estaban exentos de tributación. Podemos pensar, sin embargo, que estos casos deben haber sido una excepción, y que en general los *macehuales* eran tributarios y los *pillis*, tributados.

Tendríamos así en *Tenochtitlan* toda una gama de personas en diversa situación con respecto a la tributación: gente tributada por todos los tributantes, gente tributada por los de su *calpulli*, gente no tributante y no tributada, y gente no tributada pero tributante. Según los datos anteriores es indudable que se presentaba una marcada diferenciación en estos estratos de la población, por lo menos. Si solamente contáramos con estos datos claro que tendríamos que pensar que la sociedad de los *tenochca* era clasista; pero si analizamos otros datos a nuestra disposición, veremos la gran importancia que tenía la herencia para pertenecer a cada uno de estos estratos —exceptuando el de los valientes— lo que les quita el carácter clasista. En primer lugar se nos dice que en naciendo los niños "los lavaban los sacerdotes, y después de lavados les ponían en la mano derecha una espada pequeña y en la izquierda una rodelilla. A los hijos de la gente vulgar les ponían las insignias de sus oficios, y todo ésto debajo de algún ídolo" [84]. De aquí se infiere que las gentes se diferenciaban por su rango desde su nacimiento: unos nacían destinados a servir en guerras y fronteras (los de las rodelillas, que no eran gente vulgar), y no se habían de aplicar a labores soeces, y los otros nacían destinados a ser labradores y a tener oficios bajos y viles. Ahora bien, esta situación era hereditaria, puesto que los *pillis*, se llamaban "principales" [85], y estos eran hijos y nietos y bisnietos de señores [86], es decir, que la diferenciación que se hacía entre estos dos tipos de gentes desde el nacimiento, era hereditaria. Y como realmente se nos habla de principales desde la época de la migración de los *tenochca* [87], podríamos pensar que eran rangos muy antiguos. El carácter de *macehual* de seguro era también inseparable y socialmente complementario del de "prin-

[83] Sahagún, II, p. 308.

[85] Zurita, p. 91.
[86] Zurita, p. 90.
[87] Genealogía y Linaje, p. 248.

cipal"[38]: se menciona también durante la migración [38], y podría considerarse como un reflejo mental de la situación, la leyenda que cuenta que los *macehuales* todos descienden de los primeros *macehuales*, los antiquísimos dioses *Oxomoco* y *Cipactonal* [39], conectados íntimamente con labores del cultivo del maíz, propias de su rango. Con respecto a los mercaderes tenemos también la existencia de principales desde la época de *Cuacuauhpitzahuac* en *Tlatelolco* [40], lo que confirmaría su estratificación hereditaria. Por lo que se refiere a los artesanos, había fundadores de los oficios a quienes sus sucesores adoraban como dioses [41]; seguramente eran ellos los correspondientes antecesores *pillis*.

Estos estratos no tenían una rigidez absoluta, de casta. Además de que ya vimos que algunos *macehuales* estaban en condiciones especiales por sus hazañas en vida, y no por nacimiento, y de que había principales que perdían su situación privilegiada de tributados, sabemos que era una costumbre la realización de casamientos entre *pillis* y *macehuales* [42], cuyos hijos deben haber tenido una condición distinta a la de los hijos de casamientos *pillis* entre sí, o de *macehuales* puros. Debe haberse presentado toda una serie de personas, desde las más nobles hasta las más plebeyas, podríamos decir (usando los términos noble y plebeyo con el sentido nuestro), dando origen a una verdadera pirámide de estratos dentro del grupo *tenochca*. Vemos así que la diferenciación de rango tiene una diferenciación económica correspondiente; pero que ésta tenía una limitación: no todos los *pillis* podían ser tributados, sino solamente los funcionarios de la tribu o del *calpulli*, y por otra parte, no todos los *macehuales* tributaban, estando exceptuados los valientes en la guerra. Reconocer esta estratificación entre los *tenochca* es una posición correcta de Caso, Spinden [43], Toscano, Moreno, White, etc., pero es correcta solamente en parte, pues estos estratos no eran clases sociales: podrían ser estamentos por la poca movilidad que implicaba el pertenecer a ellos generalmente por herencia (afirmación que con respecto al estrato superior, puede ser definitiva); pero —y esto es lo fundamental— se puede demostrar que la existencia de estos estratos estaba ligada a la de clanes ambilaterales estratificados —los *calpullis*— y que no era por tanto una estructura fundamental sino derivada, como se ve en la Segunda Parte de este trabajo.

CAPITULO III

División Territorial

Otro de los aspectos de la Organización Social de *Tenochtitlan* que ha permitido pensar que no estaba basada en el parentesco por ascendencia común es la existencia de lo que los españoles llamaron "barrios", o divisiones territoriales de *Tenochtitlan*. Este capítulo intenta describir todos los caracteres que estuvieron relacionados con los *calpullis* en el conjunto de la organización territorial y no propiamente hacer una reconstrucción de tipo topográfico [1]. Si analizamos los datos que a este respecto encontramos en las fuentes, vemos que nos aclaran muy ampliamente la situación existente hacia la llegada de los españoles y que podemos sintetizar en la siguiente forma:

El *Altepetl Tenochtitlan* estaba formado por
cuatro *Campan* ("barrios grandes"), lada uno de estos
por varios *Calpulli* ("barrios"), subdividido cada
uno en varios *Tlaxilacalli* ("calles" o "barrios chicos")
formado cada uno por
varios *Chinampa* (parcelas familiares).

Esta tabla resulta de examinar los datos más significativos de las fuentes referentes a la división territorial de *Tenochtitlan*. No sabemos qué ocurría antes de la llegada y del establecimiento de los *tenochcas* en la isla pero se nos dice que al establecerse en *Tenochtitlan* se dividieron en cuatro barrios los señores "cada uno con sus parientes y allegados, donde cada parcialidad edificó a voluntad" [2], según lo cual parece que los miembros de cada uno de los cuatro barrios antedichos eran más allegados entre sí que con los demás miembros del grupo *tenochca*. Por otra parte —lo que aclara el texto español— el texto *nahuatl* que describe el mismo acontecimiento da el término

[1] Topográficamente el trabajo de Toussaient Fernández y Gómez de Orozco sobre *Tenochtitlan* es muy completo. Pero no toca el problema que aquí nos interesa (Planos de la Ciudad de México. Siglos XVI y XVII. México, 1938).

[2] Códice Ramírez, p. 42.

[p. 30 is blank]

calpulli (*nahuatl*: "casa grande") correspondiendo a "parcialidades", en tanto que usa *nauhcampan* (*nahuatl*: "cuatro regiones") para designar a los cuatro barrios [3]. Según lo anterior resulta que al establecerse los *tenochca* en la isla ésta se dividió en cuatro partes (*campan*), en cada una de las cuales sólo se establecieron *calpullis* allegados entre sí.

Esto pasó cuando el establecimiento en *Tenochtitlan*. ¿Qué ocurría hacia la llegada de los españoles? Por una parte los *calpullis* todavía ocupaban las tierras que fueron "repartimientos de cuando vinieron a la tierra y tomó cada linaje o cuadrilla sus pedazos o suertes y términos señalados para ellos y sus descendientes" [4]; es decir, que hacia la llegada de los españoles los *calpullis* todavía tenían la misma distribución que cuando se establecieron. Por otra parte, en tiempos ya de la Colonia, la Ciudad de México estaba dividida en cuatro barrios grandes, cada uno con otros menores inclusos [5]. Seguramente los barrios grandes eran restos de los grupos de *calpullis* allegados (los *campan*) y los barrios menores deben haber sido restos de los *calpullis*, ambos afectados por la conquista, pero cuya importancia debe haber sido muy fuerte ya que aún entonces, como antes, tenían estos barrios (grandes y chicos) mandones tanto "en común como en particular" [6].

Veamos ahora lo referente a las divisiones de los *calpullis*: un autor nos dice que lo que antes de la conquista se llamaba *calpulli*, después fué llamado *tlaxilacalli* [7]. Aunque esto puede haber sucedido en algunos casos, parece que para *Tenochtitlan* el asunto no era tan sencillo. Ante todo tenemos la información de que en la época de la Colonia, además de la división de *Tenochtitlan*, en cuatro barrios grandes, y de éstos en *calpullis*, cada *calpulli* "estaba dividido en calles que ellos llaman *tlaxilacalles*" [8]. Resulta así que no eran lo mismo *tlaxilacallis* y *calpullis*, sino que *tlaxilacalli* era, por lo menos, subdivisión del territorio de los *calpullis*, si no es que fueron agrupaciones basadas en parentesco por ascendencia, según sugieren documentos que nos hablan de parejas fundadoras de *tlaxilacallis* en lugares cercanos a México [9] y la afirmación de que los *tlaxilacallis* de *Tenochtitlan* defendían con gran empeño la integridad de sus tierras [10], como si fueran de grupos cerrados de parientes.

Pudiera pensarse que hacia la llegada de los españoles los *tlaxilacallis* fueran familias o lotes familiares del *calpulli;* pero contra esta posibilidad tenemos argumentos de fuerza: se les llama "barrios" y "calles"; además, de seguro acontecía en México lo que en otros lugares cercanos, en que cada *calpulli* estaba subdividido en dos o tres *tlaxilacallis* [11], número de familias que parece muy pequeño para formar un *calpulli.* Y en el "Plano de Papel de Maguey", aparecen las "calles" mencionadas por Torquemada —los *tlaxilacallis*— separados entre sí por agua y tierra, y cada una de ellas tiene subdivisiones que de seguro eran las parcelas familiares. Parecen así los *tlaxilacallis* más amplios que la familia o que el territorio familiar, y menores que un *calpulli* o que el territorio del *calpulli.*

Por otra parte tenemos afortunadamente muchos datos que nos aclaran la situación concreta de los *tlaxilacallis* en *Tenochtitlan*: la Descripción del Arzobispado de México nos dice que los *tlaxilacallis* eran como "barrios pequeños" [12] y que en S. Pablo —correspondiente al *campan Teopan* [13] o *Teopan Xuchititlan* [14]— había 12 *tlaxilacallis* y cinco estanzuelas pequeñas, además de *Iztacalco,* que solía ser de S. Pablo sólo ocasionalmente. Revisando la lista de "barrios" del Ms. 13994 [15] se obtienen 11 "barrios" (V. la Tabla de *tlaxilacallis*): de seguro estos "barrios" del citado Ms. son *tlaxilacallis.* Esto nos aclara mucho la situación territorial de *Tenochtitlan*: uno de los nombres de *tlaxilacallis* que aparecen en el citado Ms. es igual a uno de la lista de barrios de la tabla de correspondencia entre barrios y división social del trabajo (*Tzapotlan,* el de los vendedores de *uxitl* de S. Juan). Otro de los nombres de *tlaxilacallis, Huitznahuatonco* (de S. Pablo), de seguro no es el *Huitznahuac* de los señores y pescadores mencionado por Sahagún (v. p. 50), ya que el *tlaxilacalli Tecpantitlan* (q. d. lugar de palacio) debió ser el que correspondía a los señores, de S. Juan. Bien puede ser que el *tlaxilacalli Tecpantitlan* tuviera otro nombre, no descriptivo y éste fuera uno de los tres que aparecen en la lista: *Yopico,* que es el único que se asocia con los señores exclusivamente; otro puede haber sido el de un *calpulli* al que perteneciera el *tlaxilacalli Tecpancaltitlan.* Desgraciadamente no podemos hacer, con los datos a nuestra disposición, otras correlaciones entre *tlaxilacallis* y *calpullis.* Podemos sin embargo hacer otras muchas aclaraciones: había un solo *tlaxilacalli* en que estaba el templo de mujeres (*Cihuateocaltitlan*), en el *campan Moyotla* (S. Juan). En cambio había cuatro *tlaxilacallis* llamados *Teocaltitlan,* uno en cada *campan,* que de seguro correspondían a los lugares

[15] En Cédulas Reales y otros papeles tocantes a las Indias.

de los templos, de *Teocallis*. Por otra parte todo lo anterior nos hace entrever una diferencia en la categoría de los *tlaxilacallis* dentro de los *calpullis* y dentro de todo *Tenochtitlan* en conjunto. Aunque los datos se refieren ya a una época posthispánica, indudablemente la situación que sugieren, tiene visos mucho más marcados de prehispánica.

Hay otros términos que debemos aclarar además de *campan, calpulli* y *tlaxilacalli*, y cuya importancia para entender la situación de los *tenochca* es fundamental: *altepetl* se traducía por Pueblo y *huey altepetl* por Cabecera de Provincia. *Huey altepetl* quiere decir *altepetl* grande, y se aplicaba a lugares como *Tenochtitlan* con muchos *calpullis* y con hegemonía política sobre otros grupos; bien puede ser que *altepetl* se aplicara a lugares sin hegemonía sobre otros grupos. Un autor nos dice que *altepetlalli* (tierras del *altepetl*) y *calpullalli* (tierras del *calpulli*) eran lo mismo [16]. Completando ésto nos dice Clavigero que las tierras del *altepetlalli* se dividían en tantas partes cuantas eran los barrios [17], quedando así aclarada la relación entre *altepetlalli, altepetl* y entre *calpullalli* y *calpulli*: el *altepetl* estaba formado por *calpullis*, y el conjunto de las tierras de los *calpullis* constituía las tierras del pueblo [18].

Parece que los términos discutidos tenían en ciertas condiciones límites vagos, pudiendo pensarse que por un proceso natural de crecimiento, teóricamente al menos, el territorio de una familia podía llegar a ser el de un *tlaxilacalli*, el de un *calpulli*, (quizá no, el de *altepetl*); quedando sin embargo como unidad básica el *calpulli*, la "casa grande".

Encontramos así la Organización Territorial de *Tenochtitlan* como la presentamos en el principio de este capítulo: *altepetl, campan, calpulli, tlaxilacalli y chinampa* como subdivisiones, en orden descendente, del territorio del grupo. Esta subdivisión podría haber sido una subdivisión simplemente territorial: en barrios; pero parece más tener algunas relaciones con fenómenos de parentesco, por mencionarse *tlaxilacallis* como fundadas por parejas y *campan* formadas por *calpullis* allegados. Estas relaciones serán completamente seguras si se demuestra que el *calpulli* era un clan y de seguro se encuentran argumentos para pensar que entre los *tenochca* los *calpulli* eran clanes como se ve en la Segunda Parte.

---

[15] También en Chimalpain, p. 238.

CAPITULO IV

La Propiedad de la Tierra

Vamos a analizar otro de los aspectos de la Organización Social de los *tenochca* que pueden hacer pensar que no tenía sus bases en el parentesco: la propiedad de la tierra. En las fuentes encontramos que principalmente estaba relacionada con la existencia de los *calpullis*.

En las fuentes españolas de principios de la Conquista siempre se toman, casi indistintamente, tres criterios en realidad muy diferentes para hablar de la propiedad de la tierra: uno es el trabajarla personalmente, otro es el percibir tributo de quien la trabaja, y otro es el percibir "renta". Este último no va a ser discutido ampliamente aquí; pero con referencia a todos estos criterios podemos hacer algunas aportaciones: se nos dice que los indios hacían sus planos indicando tres clases de tierras: amarillas las de los *calpullis*, encarnadas las de los principales y de un colorado fuerte las de la recámara del rey [1]. El significado que tenían estas indicaciones es lo que nos va a ocupar principalmente.

Asentemos primeramente que las tierras de *Tenochtitlan* habían sido originalmente ocupadas solamente por miembros del mismo grupo *tenochca;* pero que parece haber indicios de inmigraciones posteriores desde otras regiones, como de *Xochimilco* [2], aunque en general carecemos de datos completos al respecto. Podemos suponer, sin embargo, que en caso de haber habido inmigraciones, éstas fueron aisladas con consentimiento del grupo en general, pues sé nos dice, sin particularizar, que el que arrancaba y quitaba los mojones y términos de los pueblos tenía pena de muerte [3]; en el caso de *Tenochtitlan*, por estar en una situación muy especial de aislamiento, era muy difícil que ocurriera una invasión.

Ya vimos que los *calpullis*, desde su establecimiento en *Tenochtitlan*, estaban concentrados y limitados, y que las tierras que ocupaban hacia la llegada de los españoles, eran las mismas que ocuparon desde su estableci-

[1] Torquemada, II, p. 546.

[p. 36 is blank]

miento en *Tenochtitlan*. Esto, aunque la repartición original haya estado en parte determinada por la cantidad de gente que había en cada uno de los *calpullis*, de seguro ya había provocado que en la época de la llegada de los españoles no hubiera una repartición equitativa; y de hecho se afirma que no todos los *calpullis* tenían la misma cantidad de gente [4], lo que es muy comprensible si el desarrollo de los *calpullis* había sido más o menos libre. De seguro no coincidiendo con el número de gente, algunos *calpullis* tenían más tierras que otros [5], y aún sabemos de algunos que las tenían "vacas" [6] (sin utilización). Esto en un principio puede no haber sido de mucha importancia, si se repartieron las tierras de acuerdo con la gente de cada *calpulli*; pero sí debe haber provocado grandes dificultades cuando algunos se desarrollaron más que otros. Parece que, por otra parte, las tierras que ocuparon originalmente los *tenochca* fueron paulatinamente aumentadas por medio de las *chinampas* [7] —terrenos artificiales—, aunque éste era un método que tenía muchas limitaciones. El resultado es, de todos modos, que las tierras de *Tenochtitlan* estaban repartidas por *calpullis* desde su establecimiento en *Tenochtitlan*, y que a pesar de las diferencias en cantidad de gente o en cantidad de tierras, no podía un *calpulli* tomar tierras de otro *calpulli* [8]. Esto sugiere fuertemente que los *calpullis* eran los grupos cerrados propietarios de los terrenos, más que simples barrios.

Vamos a ver ahora cómo estaban distribuídas las tierras dentro del propio *calpulli*: las tierras del *calpulli* estaban ocupadas por los *macehuales* solamente en parte y las demás las labraban para la paga de sus tributos [9]. Podemos complementar esta información con otra acerca de que todos tenían tierras en particular o en común en sus *calpullis* [10]. Resulta así que las tierras del *calpulli* estaban divididas primeramente en tierras cultivadas para los tributos y tierras cultivadas para el sostenimiento de los propios labradores, y en segundo lugar, resulta que estas tierras cultivadas para el sostenimiento de los propios labradores estaban distribuídas "en particular" o "en común".

Las tierras distribuídas "en particular" eran de seguro las tierras parceladas y asignadas a familias que incluían hermanos y sobrinos del jefe de

familia [11], parcelas que eran indivisibles por herencia [12] y cuyo derecho a trabajarlas caía siempre dentro de los descendientes de la misma familia [13], con pena de muerte para el que quitaba o apartaba sus mojones y términos [14].

Las tierras se daban en general a miembros del propio *calpulli* [15] y debe haber habido diferencias en el tamaño de los lotes, por lo menos según la posibilidad para trabajarlas [16] y aún había personas que no tenían tierras en su *calpulli* [17], quizá porque por dos años las habían dejado sin labrar y se las quitaban [18]. El resultado era que de los miembros de cada *calpulli* unos tenían más tierras que otros y que posiblemente todos podrían labrar más de las que tenían; es decir, que había una relativa escasez de tierras de cultivo; pero parece que las familias no eran las dueñas de sus lotes.

Ahora bien, se nos dice que algunos salían de sus *calpullis* huyendo de la tributación excesiva o por otras razones [19], quizá saliendo de los *calpullis* de más gente y menos tierras, a *calpullis* con menos gente y tierras disponibles para trabajar. A este respecto se nos aclara que quienes se iban de sus *calpullis* perdían los derechos a las tierras asignadas para ellos en su *calpulli* [20].

Se podían dar tierras de unos *calpullis* a miembros de otros calpullis "rentándolas" para las necesidades públicas y comunes del *calpulli* [21], posiblemente por tiempo limitado, "por un año, dos o más" [22] y aparentemente no "por vida", es decir, no pasando en realidad los miembros de un *calpulli* a otro *calpulli*. (Esto en parte tampoco acontece en los *calpullis* estudiados por Redfield en 1920 [23], sugiriendo ésto que el *calpulli* era un grupo propietario, más que un barrio). De todos modos debemos asentar que en general la mayoría de las gentes debían tener tierra en sus *calpullis* y que posiblemente el salir a otros *calpullis* era una excepción (Podríamos incluso pensar que entre los *tenochca* acontecía lo que entre los maorí, donde era posible el paso

[23] Redfield, 1920, p. 288.

de una persona de un grupo a otro, en el que se le adoptaba [24]). Así parece que el *calpulli* era un verdadero grupo propietario, dándose el uso de la tierra como prueba de su propiedad. Eran las tierras pintadas de amarillo, con pleno reconocimiento de su existencia.

Había, además de las tierras dadas a los *macehuales* comunes del *calpulli* de que acabamos de hablar, una modalidad en la distribución de las tierras de los *calpullis* que era de fundamental importancia: las tierras dadas a los valientes. Estas tierras se daban por merced por hechos hazañosos en la guerra [25]. Pero, y ésto es lo fundamental, eran tierras de las que se sustentaban y donde no podían tener terrazgueros [26]; es decir, eran tierras que trabajaban y les rendían frutos, pero que no les daban tributos, como a los verdaderos principales (v. p. 27); por otra parte, estas tierras eran parcelas familiares y no eran *tlazilacallis*, ni *calpullis*, puesto que se nos dice que las heredaban los miembros de su familia y regresaban al *calpulli* a que estaban asignadas en caso de que no hubiera heredero, para que se pagara el tributo a que estaban obligadas [27]. A menudo se ha creído que estos "valientes" eran gente verdaderamente ennoblecida y por lo tanto, tributada [28]; pero resulta, de acuerdo con los datos presentados anteriormente que los valientes eran *macehuales* que no tributaban, pero que por lo demás tenían tierras que trabajaban personalmente como los demás *macehuales*, y como no lo hacían los principales. El problema es saber si ellos estaban en tierras de sus propios *calpullis* o en tierras de *calpullis* extraños. En el primer caso estarían formando parte de la distribución general de la tierra por *calpullis*; pero se diferenciarían en cuanto á la situación social determinada por tributación; en el segundo caso —si estuvieran los valientes en tierras de *calpullis* extraños— es seguro que estarían en tierras de *calpullis* conquistados por la guerra, y así, aunque sí constituían una brecha, no podemos suponer que constituyeran una brecha de importancia en la distribución de las tierras por *calpullis*, puesto que la guerra tenía como finalidad principal el conseguir tributo a los conquistados y ellos no tributaban. Esto seguramente limitaba el número de los valientes no tributarios. Así podemos afirmar que esta forma de tener la tierra estaba ligada en cierto grado a la existencia de los *calpullis* y no era la fundamental en *Tenochtitlan*.

---

[24] Goldenweiser, 1922, p. 382. Mendiola, N. 1957, p. 409.

[25] Torquemada, II, p. 545 y 546; Vetancourt, I, p. 273.

[26] Torquemada, II. p. 545. Zurita (p. 176) nos dice que los renteros pagan renta "Al señor dellas", expresión que no parece referirse a *macehuales*, ni aún ennoblecidos, es decir no contradiciendo su afirmación la anterior de Torquemada.

[27] Torquemada, II, p. 546; Vetancourt, I. p. 272 y 372.

[28] Caso, Alfonso, 1946.

Vayamos a otro punto: las *pillalli*. Este término se traduce por tierras de los *pilli* —los principales, que ya tratamos. Ahora bien, ya vimos, que una porción de las tierras del *calpulli* se labraba para el tributo y otra para el sostenimiento de los *macehuales* (v. p. 38), y que el tributo dado a los *pilli* era el labrarles una sementera (v. p. 24). Podemos pensar así que las tierras del *calpulli* (*calpullalli*) tenían una porción para el sostenimiento de los propios *pilli* (*pillalli*) y que el resto era la tierra de que se sostenían los *macehuales*. Esto se comprobaría cuando se nos dice que salvo las tierras vendidas por principales a mercaderes, todas eran, o habían sido tierras del *calpullis* [29]. Habría que pensar, sin embargo, que es posible, aunque casi imposible, que éstas estuvieran separadas del conjunto de las tierras de su *calpulli*. Serían, en uno u otro caso, las tierras encarnadas, las de los principales.

Examinemos ahora los datos sobre otras tierras, las llamadas *tecpantlalli*: encontramos en las fuentes éste término, que se puede traducir como tierras del *tecpan*. Ya vimos que *Tecpancaltitlan* era uno de los *tlaxilacallis* de *Tenochtitlan* (v. p. 33) lo que nos hace pensar que estas tierras eran las de este *tlaxilacalli*. En las *tecpantlalli* habitaban los *tecpanpouhque* o *tecpantlaca* [30], términos que respectivamente pueden traducirse como "los contados en el *tecpan*" y "las gentes del *tecpan*", es decir, un grupo de gentes determinado. Eran tierras y gentes del señor [31], y en ellas vivía "gente que era muy estimada y conjunta a la casa del rey, y a quien más estimaba el común" [32]. Todo ésto nos hace pensar que estas tierras eran de un grupo, al que pertenecía "el rey" (q. d. *tlatoani*). Ahora bien, estas tierras "sucedían de padres a hijos... y si alguno moría o se iba a otra parte, quedaba su casa y su tierra para que con orden del rey o del señor, los demás de la parcialidad pusieran otro en su lugar", y no podían venderlas [33], y las labraban los *tecpantlaca* personalmente [34]. Estos datos nos indican, primero, que en ellas reinaba la misma situación que reinaba en las tierras de los *calpullis* y *tlaxilacallis*: distribución en parcelas familiares y herencia del uso, y que tenían cierta unidad con respecto a un grupo que las usaba: su "parcialidad". Todo ésto nos hace pensar que las *tecpantlalli* eran de un *calpulli* o de un *tlaxilacalli*, el *calpulli* o el *tlaxilacalli* al que pertenecía el *tlatoani*.

---

[29] "las tierras que poseían eran del pueblo y del común y de los barrios que tenían repartidos, y que algunos principales vendieron parte de estas dichas tierras a personas particulares y aquestos que las compraron las dejaron a sus descendientes; empero que al principio fueron tierras de los pueblos, que ellos llaman *altepetlalli*; o tierras de los barrios, que ellos llaman *calpullalli*" (Anunciación, p. 238).

[30] Torquemada, II, p. 346; Ixtlilxóchitl, II, p. 170.

[31] Ibid.

[32] Torquemada, II, p. 346.

[33] Torquemada, Ibid.

[34] Ixtlilxóchitl, II, p. 170.

Ahora bien, no se nos habla solamente de *tecpantlalli*, sino también de *tecpillalli*, que "casi eran como las que se decían *pillalli*" [26]. *Tecpillalli* se traduce como tierras del *pilli* o de los *pillis* del *tecpan*, lo que nos aclara qué tipo de tierras eran las que recibían este nombre: las tierras destinadas al sostenimiento de los *pillis* del *tecpan*, —los nobles del *calpulli* del *tlatoani*—, tierras que posiblemente formaran una unidad con las demás del *tecpan*, como quizá la formaban las de otros *calpullis* divididas entre *macehuales* y *pillis*.

Había tierras y heredades para los templos [26]. Estas de seguro eran de dos tipos, pues por una parte había, "en cada barrio una suerte" [27], es decir, que de seguro estaban distribuídas por *calpullis*. Pero por otra parte había otras que no estaban o parecían no estar en esas mismas condiciones, puesto que en ellas los sacerdotes funcionaban como mayordomos [28] y tenían terrazgueros y vecinos que tributaban sólo a los templos [29]. Quizá esto signifique que eran *calpullis* o *tlaxilacallis* cuyos principales eran sacerdotes. Reforzando esta afirmación el que estas gentes se diferenciaban de las otras y tenían a honra ser dedicadas a ese ministerio [30], algo semejante a lo que acontecía en el caso de los *tecpantlaca*. Lo que podemos deducir de todo lo anterior, de cualquier modo, es que para hablar de la existencia de las tierras de los templos se toma como criterio el tributo, y no la utilización directa de la tierra por los sacerdotes. Por otra parte se puede obtener de nuestros datos la seguridad de que el *calpulli* era un organismo fundamental para la existencia de estas tierras en la forma en que se presentaban: dando cada *calpulli* una parte de sus productos, o dedicándose *calpullis* enteros a tributar exclusivamente, para el sostenimiento de las necesidades religiosas. En algunos casos había pueblos alejados de la propia ciudad, que eran tributarios para los templos y que se turnaban cada medio año [31]. Pero no sabemos qué ocurría durante el medio año que no tributaban a los templos. Podemos pensar que seguían con su organización en *calpullis* y quizá tributando a sus principales nada más.

Algo semejante a lo que ocurría con las tierras de los templos ocurría con las tierras para la guerra, o *yaotlalli* que tenían diversos nombres según los productos que proporcionaban, *cacalomilli*, *milchimalli* [32] y que eran "para

el bizcocho de la guerra" [43]. Por una parte eran tierras repartidas "en los *calpullis* y barrios, según la cantidad de gente que había en cada parcialidad" [44], posiblemente de la propia ciudad. Estas tierras había también en lugares conquistados, pues se nos dice que Moctezuma tenía en todos los pueblos tierras señaladas que le sembraban como a los templos y (cuyo producto) se llevaba a *Tenochtitlan* —si no había guarnición—, o la comía la guarnición, y si no sembraban, les daban de comer de todos modos [45]. Parecen ser así simplemente tierras de *calpullis* cuyo tributo se destinaba al sostenimiento de los guerreros y de las necesidades de la guerra. Hay sin embargo, una mención que aparentemente contradice lo anterior, aunque es posible que sólo lo suplemente: se nos dice que estas tierras de guerra estaban en los mojones y no eran de nadie, ni nadie sucedía en ellas, sino que las ocupaba el señor que mantenía la guerra [46]. Parece que ésto quiere decir que para gozar de lo tributado no había sucesión de una persona determinada por otras características que no fueran las de ser el jefe de la guerra; pero que sí estaban ocupadas por labradores comunes y que su tributo se daba al jefe de los ejércitos para las necesidades de la guerra. Al hablar de que estaban en los mojones quizá se refiere a que estaban en los límites de los lugares de conquista. La posibilidad de que la característica de este tipo de tierras fuera únicamente la finalidad del tributo se podría reforzar con los datos de Ixtlilxóchitl de que en las tierras de los señores conquistados y sujetos había otras suertes de tierras que llamaban *laotlalli* (sic. por *Yaotlalli*), las cuales eran ganadas por guerras, y de éstas lo más principal pertenecía a las tres cabezas del imperio de las cuales una era el jefe de la guerra, y lo demás se daba y repartía a los señores y naturales que habían ayudado con sus personas y vasallos en la conquista de los tales pueblos ganados por guerra y ésto las más de las veces venía a ser el tercio de los pueblos o provincias conquistadas [47]. Según todo lo anterior parece que el criterio para caracterizar este tipo de propiedad de la tierra, era la propiedad del tributo, siendo en realidad tierras de *calpullis* como las restantes.

Se nos habla de otro tipo de tierra: las *tecuhtlalli* (tierras del o de los *tecuhtlis*). Para dilucidar lo que ésto significa tenemos tres citas: una, que en estas tierras recogían los señores y principales a los que venían de otros pueblos y provincias huyendo [48]; otra, que cada señor indio en su tierra,

cuando a ella se venía de otras partes a poblar, e a los que estaban poblados las daban tierras en que sembraran, señaladas "que cada uno conosca las tierras que ha de sembrar y la mayor parte dellos tienen su casa en la heredad que tienen por suya" [80]. Según esto parecen llamarse *tecuhtlalli* todas las tierras que tributaban a los *tecuhtlis*; pero cuya organización puede haber sido en *calpullis* si quedaban los pobladores llegados, como los que ya estaban asentados. Hay que pensar, que no obstante esta posibilidad, las inmigraciones de pobladores quizá no siempre fueron con personas formando *calpullis*, o que se organizaran al establecerse. Bien puede ser que parte de estas tierras fueran las que se llamaban *tlatocamilli*, de las que se dice tenían cuatrocientas medidas de largo y ancho, se arrendaban y que la renta se comía y gastaban en la casa del señor [80] y eran muchas y buenas, pero no se podía disponer de ellas [81], es decir, venderlas. Es posible que el resto de las *tecuhtlalli* fueran las tierras de los *calpullis* que se podían rentar para beneficio de los *calpullis* (v. p. 39). En todo caso podemos pensar que en parte estas tierras parecen ser tierras de *calpullis* cuyo tributo era para el *tecuhtli* o los *tecuhtlis*, y que en parte las *tlatocamilli* sí parecen haber sido tierras de posesión de un grupo muy limitado, trabajadas por renteros; pero de un grupo con características muy especiales seguramente hereditarias. Quizá eran las tierras "de la recámara del rey", pintadas de encarnado.

Las formas hasta ahora estudiadas son comunales, cuyo producto se divide entre quienes las trabajan directamente y sus jefes, en distintos modos. Vamos a tratar finalmente un tipo de propiedad de la tierra que se separa completamente de ellas porque parece ser de propiedad particular: se nos dice que algunos parientes de los señores e algunos principales y mercaderes tenían tierras que podían jugar y vender [82]. Parecería con este simple dato que había un verdadero comercio libre de la tierra; pero no acontecía así: en primer lugar en lo que acabamos de transcribir vemos que poseían las tierras en esta forma solamente algunos de los parientes de los señores, algunos de los principales y algunos de los comerciantes; si los principales no eran sino cuando mucho un 10 por ciento de la población (v. p. 24), el número de estos poseedores debe haber sido muy reducido. En segundo lugar, con respecto a los comerciantes, podemos decir que si, como vimos, presentaban la división entre nobles y plebeyos (p. 25), lo más posible es que los comer-

[80] Oviedo, III, p. 535.

[80] Ixtlilxóchitl, II, p. 170. Nos dice también que se llamaban *Itonal Intlacatl*, lo que significa algo como "el signo del nacimiento de la gente", es decir, quizá fueran las del linaje del señor.

[81] Zurita, p. 105.

[82] Oviedo, III, p. 535.

ciantes plebeyos no pudieran ser propietarios que disponían de sus tierras libremente, como no lo podían ser los *macehuales* comunes ni aún los ennoblecidos por valientes [53]. Esto limita, considerablemente, tanto el número de propietarios de este tipo, cuanto el número de propiedades en tales condiciones. Por otra parte no se podían vender las tierras que estaban sujetas a algún vínculo [54], lo que seguramente quiere decir que las tierras que se podían vender no eran las tierras destinadas al sostenimiento de los gobernantes del grupo *tenochca*, ni las destinadas al sostenimiento de los jefes de los *calpullis*, ni las destinadas a los sacerdotes, ni a los guerreros, ni las hereditarias en los miembros comunes de los *calpullis*. Quizá se trataba entonces de parcelas de las tierras de lugares conquistados dadas a *macehuales* valientes o a *pillis*, pero que no estaban ocupadas ya por los *macehuales* de *calpullis*, sino posiblemente por los muertos en la guerra. Deben haber sido muy pocas y de seguro no formaban la base de la sociedad como se presentaba hacia la llegada de los españoles. Las tierras con ocupantes dadas a los valientes nobles eran quizá tierras de *calpullis* —como las de los templos, etc.—, y constituían realmente sólo formas de propiedad del tributo; en cambio éstas, sin ocupantes, sí eran tierras con características de propiedad particular, de las que se podría obtener renta si se era noble, pero no si se era *macehual* ennoblecido [55], (v. p. 40). Es decir que aún saliéndose de la forma concreta de organización en *calpullis* en parte, quedaban dentro de ella, por ser esta propiedad exclusiva de personas, cuyo rango era hereditario, y estar ligada la existencia de estos rangos a la existencia de los *calpullis* como ya vimos. Queda en pie saber cuáles eran las características de los *calpullis* para decidir en el fondo cuál era la base de esta forma especial de la organización de la propiedad de la tierra.

Hemos visto cómo la distribución de la tierra se realizaba principalmente por *calpullis*, que parecen grupos propietarios. En esta forma parece fácil ver el papel de los jefes de *calpullis*: la unidad con personalidad era el *calpulli*, pero el jefe tenía su representación tanto ante los demás miembros del *calpulli* como ante personas extrañas, y la tributación que se le hacía, quizá no era como propietario, sino como funcionario; aunque muy posiblemente con el curso del tiempo se había estado forjando una separación entre el papel ideal del jefe y el papel real, aprovechando el jefe su situación para obtener un nivel de vida muy superior al de los *macehuales* de su propio *calpulli*. Esta organización de la propiedad de las tierras por *calpullis* parece ser la fundamental, y derivada, la existencia de tierras cuyo tributo se destinaba al sostenimiento de funcionarios con papeles sociales muy diversos (sa-

[53] Torquemada, II, p. 545 y 546. Vetancourt, I, p. 275.
[54] Torquemada, II, p. 545.
[55] Torquemada, II, p. 545 y 546.

cerdotes, guerreros, etc.), qué realmente no parecen propietarios de tierras sino de derechos a tributos provenientes de tierras de *calpullis*. Sólo las tierras de los *macehuales* ennoblecidos y las de los principales no sujetas a vínculo eran las que se salían en parte de esta organización de la propiedad por *calpullis*. Todo esto nos plantea dos posibilidades: una es que los *macehuales* y los *pillis* tuvieran sus tierras en común (*calpullalli*) y que parte de ellas se labraban para el sostenimiento de los *pillis* o de los sacerdotes o guerreros nobles (*pillalli*). Otra posibilidad es que los *macehuales* tuvieran sus tierras en común (*calpullalli*) y los *pillis* en particular (*pillalli, tecpillalli, tlatocamilli*), pero sujetas a ciertas restricciones de carácter social. De todos modos ambos grupos —*pillis* y *macehuales*— serían propietarios de tierras, y de todos modos quedarían las tierras no sujetas a vínculos —las de ciertos *tecuhtlis*, principales y mercaderes— como tierras de propiedad particular, pero con tantas restricciones en lo referente a los sujetos que podían poseerlas, que no quedaban como una estructura principal, sino secundaria en importancia. El que hubiera otras formas de propiedad de la tierra no rompe la estructura fundamental si no son las que predominan: podríamos decir que casi todos los fenómenos culturales se presentan en todas las comunidades; pero que los importantes y básicos no son los mismos en todas las comunidades. El problema fundamental es entonces otro: estando fuertemente determinada la propiedad de la tierra por la existencia de los *calpullis*, necesitamos saber cuáles eran las bases de los *calpullis* para decidir si estas formas, las más generalizadas y principales de la propiedad de la tierra, estaban o no, determinadas por fenómenos de parentesco por ascendencia común.

CAPITULO V

División Social del Trabajo

Hay otro aspecto de la Organización Social de los *tenochca* que ha permitido pensar que no estaba basada en el parentesco por ascendencia común, sino en la producción económica: la división social del trabajo por grupos especializados semejantes a gremios. Y analizando los datos de las Fuentes de la Historia de México, se encuentra también, que en este aspecto como en los anteriores, el *calpulli* era un elemento fundamental.

Si los labradores constituyeron durante algún tiempo la totalidad de la población de *Tenochtitlan* es algo que no sabemos todavía. Lo que sí sabemos es que hacia la llegada de los españoles reinaba una situación muy compleja. Por un dato ya de la época de la Colonia sabemos que todos los vecinos, aunque tuvieran otra ocupación, tenían sus tierras de cultivo [1], aunque cultivaran poco [2]. Esto, seguramente era aún más general antes de la llegada de los españoles, es decir, que el cultivo era una actividad común a toda la población, quizá exceptuando a los principales; pero que además, no en todas las personas era la actividad única, teniendo algunas, otras ocupaciones. Todos sabían "labrar una piedra, torcer un cordón y buscar de qué lo hacer y los demás oficios que no demandan mucha arte" [3]. Complementando lo anterior había una diferenciación en las actividades de las gentes para producir aquellas cosas "que habían de vender" [4], y un verdadero mercado de la fuerza de trabajo que se ofrecía en plaza como otra mercancía [5]. Es decir, se presentaba una división social del trabajo que podríamos llamar artesano. Sabemos de la existencia de mercaderes —personas que estaban especializadas en labores de intercambio de objetos no producidos por ellos directamente—. De lo anterior podemos inferir que había una división del trabajo entre labradores, artesanos y mercaderes, además de la que ya vimos entre traba-

[5] Zurita, p. 83.

jadores manuales y directores. Algunos autores han pensado que estos mercaderes constituían una clase social [6] o los principios de una clase social [7] o una casta [8] o que los artesanos constituían gremios [9] derivados de clanes que se convirtieron en unidades de la división social del trabajo [10]. Vamos a dilucidar ésto.

Por una parte los mercaderes se "contaban" en sus *calpullis* [11], es decir, que pertenecían a *calpullis*. Por otra parte, al hablar de los mercaderes y de los artesanos, se nos dice que de toda clase de gente había en los *calpullis* [12] y que los mercaderes y artesanos eran "de estos barrios y *calpullis*" [13], afirmaciones de las que podemos inferir que en los *calpullis* estaban tanto los mercaderes, cuanto los artesanos y los labradores.

Ahora bien, por una parte, en general, los padres daban a sus hijos educación para ejercer sus mismas ocupaciones [14], y por otra se hace una declaración de mucha importancia: que a los hijos de la gente vulgar al nacer ponían en las manos miniaturas de los instrumentos de sus oficios (v. p. 28). De ésto resulta que desde el nacimiento se sabía cuál era el oficio que cuando adulto iba a tener el recién nacido, y que este oficio era en general el del padre, es decir, que había herencia de la ocupación productiva. Esto seguramente acontecía también con los mercaderes, pues se nos dice que mercaderes sólo podían serlo con permiso de los señores ó porque les viniera de herencia [15]. Tenemos así una indudable herencia del papel en la división social del trabajo.

Parece que en *Tenochtitlan* esta división del trabajo se realizaba por barrios, como en *Tezcoco*, (donde los de un barrio tenían una misma ocupación, todos los del barrio la habían de tener y no se habían de mezclar otros con ellos [16]), pues en todas las provincias de México la especialización en las cosas que se habían de vender era por "barrios" [17]. Además —y esta es la prueba fundamental—, se puede establecer una correlación entre nom-

bres de "barrios" y ocupaciones (v. p. 50), reuniendo datos dispersos principalmente de Torquemada y Sahagún, que se refieren a esta división del trabajo y a la especialización por grupos en la adoración de las deidades. Refuerzan esta correlación tres afirmaciones, una acerca de que la dedicación mágica de las personas a una actividad se hacía debajo de algún ídolo (v. p. 28), probablemente el del "barrio"; otra, de que las fiestas de algunos meses eran "como" fiestas de Cofradía [18], es decir, de grupos aislados, probablemente de "barrios"; y finalmente, que en las fiestas a los ídolos intervenían los miembros de un solo "barrio", y no los de otros [19].

El resultado de esta correlación entre actividades, "barrios" y deidades se presenta aquí en una Tabla y nos aclara completamente el carácter de la división social del trabajo en *Tenochtitlan*: era por "barrios" que separaba a jefes tribales, pulqueros, comerciantes, etc. Es una división que muy difícilmente se podría caracterizar como clasista, pues no tiene sentido, por ejemplo hablar de la clase de los pulqueros, pues de ser así, ellos quedarían en iguales condiciones de "clase", que los mercaderes. Parecería corresponder más bien a una división gremial, ya que la clase de un gremio es la organización de las gentes que tienen un mismo oficio [20] y que en ella se presenta la separación entre trabajadores manuales y directores que se presentaba también entre los *tenochca*, como ya vimos (v. p. 23). Resulta sin embargo, muy raro que hablemos de un gremio de señores, como tendríamos que hacerlo si aceptamos que la división del trabajo por "barrios" que mostraban los *tenochca* era por gremios; y es falsear la situación porque los señores no reúnen las características de trabajo manual que son básicas en una organización gremial. Creo poder probar, por otra parte, que estos "barrios" —que probablemente eran *calpullis*, puesto que en general no coinciden sus nombres con los de los *tlaxilacallis*— eran clanes, y que por lo tanto la división del trabajo, como la propiedad de la tierra, la distribución territorial de la población, y la estratificación social, eran resultantes de una organización de la población *tenochca* por clanes. Ya así no resulta anacrónico hablar de clanes de señores, ni de clanes de pulqueros.

EL CALPULLI COMO CLAN

[p. 53]
[p. 52 is blank]
[p. 54 is blank]

CAPITULO VI

PRUEBAS DE QUE EL CALPULLI ERA UN CLAN

La Organización Territorial de *Tenochtitlan*, la Propiedad de la Tierra, la División del Trabajo y la Estratificación Social, y otros aspectos de la Organización Social de *Tenochtitlan* que no han sido tratados en la Primera Parte de este trabajo, como la Educación [1] y la Religión [2], en los que la influencia del *calpulli* es de gran importancia, y tienen un papel determinante, nos plantean el problema fundamental de la Organización Social de los *Tenochca*: ¿los *calpullis* eran clanes, o barrios simplemente, o gremios, u otro tipo de organismos sociales? Tienen aparentemente características de todo lo anterior ¿Cuál era su organización interna? La respuesta a estas cuestiones nos dará de seguro una idea correcta sobre las bases de la Organización Social de los *Tenochca* y de su estado evolutivo. Por ésto vamos a tratar de contestarlas. El *calpulli* (*nahuatl* 'casa grande') es un organismo que ha sido presentado como un clan por unos autores, o como resto de un clan por otros (v. la Introducción) y de seguro era el *calpulli* el clan de los *tenochca* si los *tenochca* tenían clanes. Ahora bien, para saber si el *calpulli* presentaba características de clan tenemos que dilucidar si los individuos que pertenecían a un *calpulli* pertenecían a él porque desde su nacimiento tenían ligas de parentesco con los demás miembros del *calpulli*, o si, por el contrario, originaba sus ligas el hecho de vivir ciertas personas en un mismo lugar, es decir, si existían o no existían los lazos de parentesco por ascendencia común entre los miembros de un *calpulli*. De hecho, este proceso puede reducirse a discutir los datos encontrados en la revisión de las Fuentes de la Historia de México, hecha para dilucidar este punto, y que, en general —puedo adelantar— pueden considerarse suficientes para demostrar que entre los *tenochca* había grupos de tipo clan ambilateral estratificado —los *calpullis*—, no habiendo en realidad razones para afirmar lo contrario.

---

[1] Véase La Educación entre los Aztecas, Monzón, 1946.

[2] En el capítulo referente a División del Trabajo trato ligeramente estas relaciones entre *calpullis* y Religión (p. 49) que sugieren problemas que deberían estudiarse más a fondo.

Digamos de paso que también para apoyar la existencia de clanes entre los *tenochca* se han presentado argumentos sin valor. Uno de ellos es la afirmación de que un escritor del Siglo XVI —Pedro Martyr— habló de casas comunales [3]; pero leyendo atentamente, se encuentra que la mención, hecha en latín, se refiere al "común de las casas" o mejor "la generalidad" de las casas [4] y no a su carácter comunal. Igualmente, forzando el material disponible sobre estos asuntos, y negando simplemente el valor de las informaciones, Morgan [5] —seguido aparentemente por Bandelier— afirma que era la comunidad *tenochca* democrática y completamente gentil, que se acomodaba bien a la existencia de clanes exogámicos. Esto es erróneo: si los únicos documentos para conocer la Organización Social de los *tenochca*, son los cronistas, tenemos que buscar qué se obtiene de sus informaciones, y ver si son congruentes. Claro que tampoco podemos fiarnos de sus simples palabras, como atinadamente lo hace notar Watterman; pero tampoco podemos negarles simplemente validez como datos básicos.

Comencemos ahora con las pruebas sobre la existencia de clanes entre los *tenochca*: Cortés nos habla de la existencia de "comunidades" [6] y de "colaciones" [7] en *Mexico Tenochtitlan*, términos que realmente son muy vagos. Las más de las veces todos los autores que hablan de los *calpullis* con términos castellanos, lo hacen en la misma forma vaga; sin embargo tenemos una muy clara definición del *calpulli* debida a Zurita, un escritor español que de seguro tuvo informes de primera mano y que hasta donde podemos precisar trató de transmitirlos fielmente por escrito. Nos presenta al *calpulli* indudablemente como un clan: "*calpulli* o *chinancalli* que es todo uno, quiere decir barrio de gente conocida, o linaje antiguo que tiene de muy antiguo sus tierras y términos conocidos, que son de aquella cepa, barrio o linaje" [8].

En esta definición entran sin duda alguna tanto elementos que marcan la intervención de fenómenos de parentesco por ascendencia (linaje, cepa) cuanto elementos de territorialidad (barrio, tierra, limites). Lo que necesitamos saber es cuáles de éstos eran los primordiales, los determinantes, si los de parentesco o los de territorio.

Se nos dice que el *calpulli* es un linaje. Linaje en general se define como

---

[8] Zurita, A., p. 86-87.

descendencia o línea de cualquier familia [9], y no tiene para nada un sentido fundamentalmente distinto. Según ésto el *calpulli* tenía una base de descendencia, o —lo que es lo mismo— de ascendencia; una base de parentesco por ascendencia.

Cepa, otro de los términos que también usa Zurita para definir al *calpulli*, literalmente quiere decir "la parte del tronco de cualquier árbol o planta que está dentro de la tierra unida a las raíces", y metafóricamente da a entender "el tronco u origen de alguna familia o linaje" [10]. ¿Por qué iba a poner nuestro cronista énfasis en algo que no existiera, si no sabía nada de la teoría de los principios formativos de los clanes? Aquí indudablemente se vuelve a hacer hincapié en el parentesco por ascendencia de los miembros del *calpulli*. No hay razón para negar que el origen de los miembros del *calpulli* era de importancia primordial para la existencia del *calpulli*, como lo era para todo clan.

En lo que hasta ahora hemos analizado se da a entender que la ascendencia, el origen de los miembros del *calpulli* es uno mismo para todos, común, ya que este es el sentido de cepa y de linaje. Pero además nos dice Zurita "parentesco antiguo" aplicando estos términos al *calpulli*. Esto nos indica que el origen común de los miembros del *calpulli* es lejano, por ascendencia, precisamente como el que une a los miembros de un clan cualquiera (y no a una familia como podría argüirse). Francisco Hernández nos habla varias veces con términos que sugieren —corroborando los datos anteriores— la existencia de grupos de parentesco por ascendencia común: "los consanguíneos" [11], "los parientes por la sangre" [12], etc., que sólo pueden referirse a grupos de tipo clánico.

Pero como ya dijimos, en esta definición que comentamos intervienen además tres conceptos que no están conectados con los fenómenos de parentesco: barrio, tierra y términos. Esto nos hace sospechar la importancia del territorio como base formativa del *calpulli*. Pero es fácil ver que el uso que se hace de estos términos refuerza el concepto primordial de parentesco como base del *calpulli* en lugar de debilitarlo: se nos dice que las tierras y los términos son del *calpulli*, de la cepa o del linaje, y no se nos dice que ellos mismos sean el *calpulli*. Según ésto en el *calpulli* es anterior la parte personal a la parte territorial: "desde hace largo tiempo se sabe que cada *calpulli* ha ocupado determinadas tierras, limitadas en su extensión" ésto es lo que seguramente nos quería dar a conocer el autor en la frase que comen-

[12] Hernández, Francisco, p. 30.

tamos cuando hace intervenir en ellas palabras con un sentido territorial.

Pero hay otro término —barrio— que aparece en la definición que comentamos y que es muy comúnmente usado como sinónimo de *calpulli*, o de cepa y linaje. En uno de los casos en que Zurita lo usa, le agrega que es "de gente conocida", no un barrio cualquiera. Esto puede explicarse porque nuestro cronista mismo notó que el *calpulli* no era simplemente un barrio, y que usar el término sin calificativo que lo caracterizara crearía confusiones. Sólo por éso se explica que ponga énfasis en la parte personal, "gentil" —de gente— del término barrio usado en lugar de *calpulli*.

Pero es común —como lo hace también Zurita, en otras ocasiones —desde los primeros escritores sobre México [13], que el término barrio sea usado como sinónimo de *calpulli*. Barrio, en español y sin calificativos, nada más tiene el sentido de "una división territorial de un poblado" [14]. Pero precisamente algunos cronistas españoles de entre quienes usaron el término barrio como sinónimo de *calpulli*, para darnos una idea de lo que era el "barrio" en México, lo definen de un modo distinto, seguramente porque se dieron cuenta de que su acepción, aplicada al México antiguo, difería de la usada cuando se refería a los barrios de su tierra: "el barrio —nos dicen— consta de familias y de pocas casas porque la gente doméstica y casera multiplicada en hijos y yernos y nietos y sobrinos, no era posible vivir sin mucha confusión, por lo cual se fueron dividiendo las familias en casas particulares, reconociendo cada cual la suya" [15]. Esta definición de "barrio" tiene, como carácter de gran importancia para nuestro asunto, la relación entre personas unidas por un parentesco reconocido por sus miembros, y es la acepción que se aplicó al "barrio" *tenochca*: para nada interviene como una cosa fundamental el contenido territorial de la más general. Es una definición que se acerca más al concepto de grupo de personas de un clan que al concepto territorial de un verdadero barrio. Posiblemente la palabra barrio era usada por los cronistas —por ser españoles— simplemente como una de los equivalentes en parte al concepto de *calpulli*, porque no tenían uno completamente equivalente, el de clan, basado en relaciones personales de parentesco por ascendencia común.

Hay otras afirmaciones que nos aclaran completamente el valor relativo del parentesco por ascendencia y de la territorialidad en el *calpulli*: "no se permitía ni se permite (antes y mientras el cronista escribe, en 1585), que los de un *calpulli* labren las tierras de otro *calpulli* por no dar lugar a que

---

[14] Barcia, Roque, Diccionario.
[15] Torquemada, II, p. 812.

se mezclen unos con otros ni salgan del linaje" [16]. No tendría sentido la prohibición que aquí se asienta, para labrar miembros de un *calpulli* las tierras de otro *calpulli*, si el *calpulli* tomara la ubicación territorial como base de su organización, si el *calpulli* fuera simplemente una división territorial: aún en el caso de que hubiera cortapisas para labrar las tierras de otro propietario, no tendría por qué intervenir el "no dar lugar a que se mezclen, ni salgan del linaje" como razón principal para la prohibición de labrar los miembros de un *calpulli* las tierras de otro *calpulli*, que surge como un obstáculo infranqueable para hacer del *calpulli* una organización simplemente basada en la ubicación o en la propiedad territorial; puesto que de ser así, por un mecanismo de cambio de propiedad territorial un individuo podría cambiar de *calpulli*. De seguro tenemos algo anterior —en cada caso particular— a la ubicación y a la división territorial en el *calpulli*, que es la que las determina; como sucede con los clanes localizados.

Lo importante en las afirmaciones hasta aquí comentadas es que se refieren a la época en que los españoles ya estaban dominando el territorio mexicano. No era una situación sobrepasada desde antes de la conquista, como han pretendido algunos autores, sino que estaba viva aunque moribunda por la influencia europea. Y si estaba viva todavía en esa época, debe haberlo estado mucho más antes de la llegada de los conquistadores, cuando todavía no se había hecho sentir la nueva influencia modificadora, influencia que, por otra parte, no fué y no pudo haber sido, en un sentido que reforzara las instituciones indias, menos aún las basadas en el parentesco por ascendencia común [17].

Es frecuente el uso del término pueblo como equivalente de *calpulli* (v. p. 34). Era frecuente también el uso del término pueblo como equivalente de clan exogámico (v. p. 62). Bien pudiera ser entonces que el término pueblo, usado como equivalente de *calpulli* simplemente tuviera el sentido de poblado en ciertas condiciones, digamos aislado, y constituído por un solo *calpulli*; lo que en otras condiciones sería un barrio: establecido en los terrenos de un poblado ocupado también por otros *calpullis* más (v. cap. 3). Se puede usar como argumento en favor de que el *calpulli* era un clan, que considerándolo como tal, desaparecen estas contradicciones de traducción del término, que de otro modo son infranqueables.

Podemos también usar como otro argumento las comparaciones hechas por los cronistas —que conocían el *calpulli*— entre él y otros organismos de las

---

[16] Zurita, p. 87-88.

[17] Legalmente la desaparición de la herencia del poder político se realizó hasta 1535 (Chávez Orozco, 1943, p. 5-6).

que tenían referencias escritas: las treinta y seis "tribus" romanas [18], que con seguridad eran clanes [19]. Por medio de estas comparaciones pretendían estos escritores darnos una idea de lo que era el *calpulli*: era una "tribu" de éstas, un clan, sólo que se llamaba *calpulli*.

Se encuentran también en las fuentes otros dos términos que seguramente son equiparables a *calpulli*: parentela [20] y parcialidad [21]. En ambos casos el énfasis del concepto está en las relaciones personales: en el primero claramente sobre las relaciones de parentesco. Sin embargo, no podemos afirmar que siempre tuvieran estos términos el significado de clan. Lo mismo puede decirse de los términos usados por Cortés "comunidades" y "colaciones".

Creo que todo lo anterior prueba con suficiente claridad que el *calpulli* era un clan, que tenía en su base misma las relaciones de parentesco por ascendencia de sus miembros. Ya vimos, por otra parte, que tenía una importancia fundamental y que moldeaba la mayor parte de las relaciones sociales de la vida de los *tenochca*. Por ésto no puede negarse que era un clan, que estaba funcionando y que no era resto de clan u otra cosa. Esto comprueba la Tesis fundamental de Morgan y de Bandelier (y hace cierta la suposición de Olson [22]), de que entre los *tenochca* hubiera organismos basados en el parentesco por ascendencia común. La base "genial" del *calpulli*, contradiciendo la idea de que fuera simplemente territorial —un barrio—, se comprueba también con las investigaciones de Redfield en Tepoztlán, en 1920, donde se encuentran restos de los antiguos clanes que todavía llevan el nombre de *calpulli*: hay miembros de alguno de ellos que viven en otro, pero a los que se reconoce como perteneciendo al *calpulli* original, ubicado en diferente lugar [23]. Esto sólo puede explicarse como resultado de una antigua organización basada en el parentesco por ascendencia común, y de ninguna manera si pensamos que su base es la ubicación o la propiedad territorial. Sólo nos resta saber de qué tipo era el clan-*calpulli*, para aclarar toda la situación a este respecto.

CAPITULO VII

Indicios de que el Calpulli era Ambilateral y con Tendencia Endogámica

Aceptar que los *tenochca* tenían clanes es simplemente aceptar una verdad histórica. Pero esta verdad crea un gran número de problemas para el investigador: ¿Qué tipo de clanes eran estos *calpullis*, cómo funcionaban, hasta qué punto tenía importancia social su existencia, cómo explicar la complejidad y la riqueza cultural de los habitantes de *México-Tenochtitlan* si estaban todavía ligados por las bases de su organización a comunidades muy primitivas? Algunas de estas cuestiones pretenden tener una respuesta en el curso de este trabajo, otras, no. Entre las que se intenta resolver está el investigar qué tipo de clan era el *calpulli*.

Hay que decir que de muchas de las comunidades muy avanzadas, que se han considerado de un nivel cultural muy alto —como son la de los griegos, la de los incas, la de los *mayas*, por ejemplo— sabemos que han entrado a la Historia como grupos con clanes, y sin embargo, todavía tenemos en pie, para casi su totalidad, el problema de saber qué tipo de clanes eran los que tenían, de acuerdo con las nuevas posibilidades teóricas referentes a este punto.

Los *tenochca* entran a la Historia con clanes. ¿Exogámicos, como dicen algunos autores, quedando en un nivel equiparable al de los iroqueses? ¿Ambilaterales y no-exogámicos, quedando en un nivel equiparable al de los incas? Debemos dilucidarlo porque sólo así pueden los pueblos del centro de México ser colocados en su verdadera posición histórica. Ya en parte ve Watterman este problema cuando nos dice que ni siquiera se sabe si el *calpulli* es un clan exo- o endogámico [1], nada más que para él esta distinción no implica una diferencia básica de estructura, como lo implica la distinción de Kirchhoff.

En general es más fácil encontrar datos sobre lo que una comunidad tiene, que encontrarlos acerca de aquello de que carece. Pero no siempre es así: al in-

[1] Watterman, 1917, p. 273.

vestigar la existencia de los clanes en comunidades que ahora no pueden estudiarse directamente —como la *tenochca*— se encuentra uno con que los escritores no son muy explícitos al respecto, y sólo ofrecen algunos datos aislados. De ellos vamos a analizar los datos que se refieren, primero, a la posibilidad de que tuvieran clanes exogámicos patrilineales o matrilineales, y luego, a la de que los *calpullis* fueran ambilaterales con tendencia endogámica.

Se puede pensar que hay un argumento en favor de que el *calpulli* era un clan patrilineal, en la costumbre muy extendida en el centro de México de ir la mujer a vivir a la casa de su esposo después de su casamiento, (costumbre designada técnicamente como "patrilocal") [2]. Pero a este respecto hay que hacer notar que esta costumbre de ir uno de los cónyuges a vivir a la casa del otro no nos dice nada sobre las características de la cuenta del parentesco por ascendencia común de ninguno de los dos, ni de ambos: se conocen grupos étnicos con costumbres patrilocales y clanes patrilineales, o con costumbres patrilocales y clanes matrilineales, o con costumbres patrilocales y clanes ambilaterales, y con costumbres patrilocales sin clanes. Y lo mismo sucede con las costumbres matrilocales: la cuenta del parentesco por ascendencia común y la ubicación de la casa de los matrimonios, son rasgos independientes y de ninguna manera el dato de que había costumbres patrilocales es un argumento en favor de que hubiera algún tipo especial de clanes.

Hay por otra parte en las fuentes una negación completamente categórica de que hubiera clanes exogámcos patrilineales entre los *tenochca*: "los indios de Vera Paz... acostumbraban no casar los de una tribu o pueblo con las mujeres del mismo pueblo. ..(y) no tenían por parientes a los deudos de su madre, por estar en otro pueblo... (y) la cuenta del parentesco era sólo entre los hombres... (y) los mexicanos y los tezcucanos jamás usaron sus casamientos en los grados que algunas de las naciones referidas" [3] Esto en nuestro lenguaje quiere decir que los indios de Vera Paz tenían clanes exogámicos patrilineales y que los mexicanos (*tenochca*) y los tezcucanos no los tenían. La claridad del informe es tal que no necesita otros comentarios.

Al tratar de ver si hay argumentos en favor o en contra de que el *calpulli* fuera un clan matrilineal, nos encontramos con que en las Fuentes no hay afirmaciones tan categóricas como la que acabamos de comentar. Claro que ésto era de esperarse si los *calpullis* no fueron clanes matrilineales. ¿Por qué iban a mencionar siempre los cronistas los rasgos ausentes?

---

[2] Román y Zamora, II, p. 90; Motolinía, Memoriales, p. 260; Zurita, p. 69; Sahagún, I, p. 118.

[3] Torquemada, II, p. 418.

Podemos hacer sin embargo, varias consideraciones acerca de la posible existencia de los clanes matrilineales, que casi tienen la fuerza de argumentos: en primer lugar, en caso de que el parentesco de los miembros de los *calpullis* se hubiera contado por la línea materna, lo hubieran dicho así los cronistas, con más claridad aún que la que usaron para explicar la existencia de los clanes patrilineales en Vera Paz. Es posible que no se hubiera mencionado la descendencia patrilineal en caso de haber sido así la cuenta del parentesco de los miembros del *calpulli;* pero de seguro no se hubiera dejado de mencionar la descendencia matrilineal, que precisamente por lo extraña que era para los españoles les hubiera presentado una gran facilidad para descubrir su principio básico. Podemos asegurar que es fácil compartir la opinión de que la anterior es también razón de gran peso para pensar que el *calpulli* no era un clan exogámico matrilineal, aunque indudablemente es de menor peso que las afirmaciones categóricas de los cronistas mismos.

Por otra parte, y como argumento final en contra de que los *calpullis* fueran clanes exogámicos, tenemos las muchas probabilidades de que fueran ambilaterales: ya vimos que se afirma que los miembros de un *calpulli* no debían labrar las tierras de otro *calpulli* por no dar lugar a que se mezclaran y para que no salieran del linaje (v. p. 59) [4]. ¿Qué posibilidades hay de interpretar ésto?: una es que la prohibición se refirió a que los hombres de un *calpulli* no debían mezclarse con las mujeres de otro *calpulli* y de seguro es esto lo que quiso decir Zurita, en cuyo caso tendríamos una confirmación plena de las tendencias endogámicas del *calpulli.*

Pero tenemos que pensar en otra posibilidad de interpretar la afirmación: que no se permitiera la mezcla de varones de diversos *calpullis.* En tal caso el dato no nos diría nada acerca de nuestro problema, que se refiere a las relaciones entre hombres y mujeres en relación con el parentesco por ascendencia común.

Una tercera posibilidad plantea la afirmación de Zurita: que tenía interés en conservar como unidades de trabajo a los hombres de cada *calpulli.* En este caso tampoco diría nada sobre nuestro problema. Sin embargo, en este caso, como en el anterior, la afirmación carece de un verdadero sentido, y no parecen ser los que pensaba dar el escritor que comentamos.

Indirectamente, no obstante lo anterior, la afirmación que se obtiene de dar la segunda interpretación a la cita de Zurita, de que no habían de

---

[4] Ya vimos que esta regla no era tan estricta y que sí podían los miembros de un *calpulli* labrar las tierras de otro *calpulli*; pero con ciertas limitaciones, como gentilres y con un mecanismo que no rompía los principios del clan (v. p. 45).

mezclarse varones de diferentes *calpullis*, nos puede conducir también a pensar que los miembros de los *calpullis* no tenían costumbres exogámicas, si la completamos con otro dato de Sahagún: "decían que las monas que comían de pie no se casarían en sus pueblos sino en pueblos ajenos y por esto las madres prohibían a sus hijas comer estando de pie" [5]. El dato es muy inseguro, pero habiendo visto que los cronistas a veces identifican clanes con pueblos (p. 62), y que en otros casos se identifican *calpullis* con pueblos (p. 34), ya tiene el carácter de indicio de que se trataba de que las mujeres no salieran a casarse fuera de su *calpulli*. Complementando este dato con el anterior de que los hombres no salían de los terrenos de sus *calpullis*, tenemos la posibilidad de pensar que ni los hombres ni las mujeres salían de sus *calpullis* para casarse: preferían hacerlo con miembros del propio clan.

Vamos a otro argumento: por un lado varias fuentes hacen la afirmación de ser los parientes del futuro marido, quienes llevaban a la novia a la casa del novio para la realización del matrimonio [6]. Por otro lado, ilustrando este acontecimiento, tenemos en el Códice Mendocino [7] un dibujo, cuyo pie dice "*amanteca* que lleva a cuestas a otra *amanteca* para que se case". Ahora bien, fuera de *Tenochtitlan* había varios lugares que se llamaban *Amantla* (de donde son los *amantecos*); pero también en *Tenochtitlan* había un barrio con este nombre, de donde podían ser las personas de la ilustración, ya que la fuente se refiere en general a la zona. Según ésto, la persona que llevaba a cuestas a la novia, que era de los parientes del esposo, era *amanteca*, y por lo tanto lo era también él: era un casamiento entre parientes de *calpulli*, es decir, por ascendencia común, y se trataba entonces de un casamiento endogámico. Por otra parte tenemos también más posibilidades de razonar, que no nos dicen nada acerca de la identidad del *calpulli* del esposo: una es que aunque se puede tratar de una *amanteca* (la que llevaba a cuestas a la otra) emparentada con el novio, bien puede ser que este parentesco no fuera por ascendencia común, sino simplemente por afinidad ("político"), en cuyo caso el novio podía bien ser de un *calpulli* diferente, no *amanteca*. Hay además, una cita que nos dice que quienes llevaban a cuestas a la novia eran parientes de ella [8]. Si tomamos esta afirmación juntamente con la ilustración del Códice Mendocino mencionada anteriormente no sabemos nada acerca de la identidad del *calpulli* del novio:

[p.66 is blank]

no sería un argumento en pro ni en contra de la exogamia o de la no-exogamia del *calpulli*.

Pero en realidad podemos reunir las dos informaciones, la de que quienes llevaban a la novia eran parientes de ella y la de que lo eran de él: resulta así, que todos eran parientes: ella, quienes la llevaban y el novio. Esta interpretación tiene la ventaja de borrar la aparente contradicción entre las afirmaciones, y de hacerlas congruentes. Ahora bien, reuniendo las dos citas con la ilustración del Códice Mendocino —que habla de *amantecas*— encontramos que el parentesco de los novios no es familiar, sino de *calpulli*, es decir, por ascendencia común: el *calpulli* no era exogámico.

Hay además, menciones que nos obligan a pensar que no había exogamia en los *calpullis*: según una fuente tardía, evitaban los casamientos con madre e hija "y algunas veces con hermana", pero despreciaban los otros grados de parentesco [9]. Esto es expresar claramente que no había exogamia y aún una fuerte tendencia endogámica.

Hasta ahora hemos analizado afirmaciones que se refieren a la población en general. Veamos ahora las conclusiones que se pueden obtener de las genealogías que hay de los señores *tenochca*. Aunque se refieren sólo a una parte de la población, como sabemos que entre ella se menciona una fuerte tendencia a realizar casamientos entre personas de lugares alejados, en caso de indicar la ausencia de exogamia, aumentan el valor de nuestros indicios en general. Encontramos como un argumento de primera categoría, la endogamia que implica la realización de casamientos entre parientes paralelos, indistintamente a través del padre o de la madre. (véase el Cuadro). Son muy abundantes los datos sobre casamientos en general; pero de los que nos interesan han sido encontrados seis: éstos en conjunto son imposibles en grupos con clanes exogámicos, y sólo son posibles en grupos con tendencia endogámica. Los casos 'b', 'c', 'd', 'e' y 'f', pudieron haberse realizado —en caso de que el *calpulli* hubiera sido un clan exogámico— solamente siendo matrilineal, pues de haber sido patrilineal, el casamiento hubiera resultado entre parientes; lo que está en contra de los principios mismos del clan exogámico. El caso 'a' solamente pudo realizarse —si el *calpulli* hubiera sido un clan exogámico— siendo patrilineal, pues de lo contrario hubiera sido entre parientes de clan. Ahora bien, todos los casamientos se pueden haber realizado solamente en el caso de que en el *calpulli* no hubiera reglas exogámicas por ninguna línea: es decir, teniendo tendencia endogámica.

La contradicción entre la tendencia endogámica de los *calpullis* y la indudable costumbre que tenían los miembros del grupo gobernante de rea-

[9] Hernández, Francisco, p. 32-33.

lizar sus casamientos entre personas de pueblos distantes es solamente aparente: por una parte puede pensarse que muchos de los miembros del grupo gobernante del centro de México eran parientes por ascendencia común, y por ésto se casaban (ésto estaría reforzado por algunas excepciones, como *Tlaxcalla*, con quien nunca se celebraron casamientos); por otra parte, se puede ver la situación así: los miembros del grupo gobernante no seguían reglas estrictamente endogámicas, como los demás de la comunidad, sino simplemente tenían la tendencia de buscar en cada caso concreto el mejoramiento de su linaje (lo que, además, es un rasgo de los clanes ambilaterales). Estas dos explicaciones en general no se excluyen, y de hecho encontramos que entre los *tenochca* había *calpullis* que se extendían por más de un poblado, y que se casaban miembros de diferentes *calpullis* [10]. Lo primero lo sugieren los nombres repetidos de algunos poblados aislados que parecían *calpullis* (como *Pochtlan*, *Amantla*, etc.), y lo segundo se desprende de afirmaciones de casamientos entre diferentes principales (v. p. 72).

Tenemos, finalmente, como indicio de este tipo de clanes, un argumento en favor de que entre los *tenochca* la cuenta del parentesco fuera ambilateral. Se refiere también a los miembros del grupo gobernante de la población; pero el hecho de que ellos también tuvieran su *calpulli* y los razonamientos del párrafo referente a la endogamia que presentaban, invalidan en gran parte las objeciones que se pudieran hacer a este respecto. En las genealogías de los señores de *Mexico-Tenochtitlan* se toman, en gran número de casos, ambas líneas —la del padre y la de la madre— para fijar la herencia de cada personaje: ésto es claramente un carácter ambilateral. Claro que puede pensarse que se trata de la cuenta del parentesco familiar, que siempre es ambilateral, y no de la cuenta del parentesco por ascendencia común —de clan—, que puede ser uni o ambilateral; pero en parte esta objeción se salva

[10] Refiriéndose a lo que acontece en los *calpullis*-barrios actuales, que parecen tener todavía algo de la cuenta del parentesco por ascendencia común en su base, nos dice Redfield que la mayoría de las personas viven en el barrio en que vivían sus ancestros por generaciones y que la pertenencia a un barrio es por herencia generalmente (1928, p. 287), y luego nos agrega que no encontró evidencia de que la pertenencia a un barrio afectara la elección de esposa. Me parece ver una contradicción en ésto, pues si es hereditaria la pertenencia a un *calpulli*, y los *calpullis* están localizados, la única forma de que permanezcan localizados es realizando en general el casamiento entre personas del mismo barrio. Muy probablemente sucede así, habiendo costumbre patrilocal dentro del mismo barrio, también; aunque algunos casamientos se realicen entre personas de distintos barrios, quizá todavía según conveniencias espéciales. El considerar al *calpulli* como un clan con tendencia endogámica, que actualmente se encuentra como resto en *Tepoztlán*, quita estas contradicciones, lo que también se puede tomar como un argumento en favor de la nueva posición que aquí se presenta respecto al *calpulli*.

cuando vemos que en fuentes de la misma época, pero referentes a otros grupos que no son *tenochca*, se hacen conexiones siempre a través de personas de sexo masculino, como si fueran unilaterales [11], y en las que solamente al tratar de personajes *tenochca* (y otros que no nos interesan ahora) se hacen las conexiones por uno y otro. Según ésto, tenemos derecho a pensar que la cuenta del parentesco por ascendencia común se hacía de un modo ambilateral entre los *tenochca* [12].

Ahora bien, la seguridad de que el *calpulli* era un clan, unida a las pruebas de que no tenían costumbres exogámicas con cuenta patrilineal del parentesco por ascendencia común, a la poca probabilidad de que las tuvieran matrilineales, a los indicios de que tenían una cuenta ambilateral del parentesco por ascendencia común, y de que tenían tendencia a la endogamia, son —todos juntos— argumentos para afirmar con confianza: los *calpullis* eran clanes, ambilaterales, con tendencia endogámica, y nada hay —por lo menos según los documentos que ahora tenemos a nuestra disposición— que nos haga pensar que no eran o que fueran clanes exogámicos y unilaterales.

---

[11] Espejo, Antonieta y Monzón, 1945, p. 48 .

[12] Nos dice Redfield, hablando de los *calpullis*, barrios actuales de *Tepoztlán*, que tienden a incluir grupos de líneas ininterrumpidas familiares, que trazan su descendencia por línea del padre. (Redfield, R., 1928, p. 294). Esto no daría una cuenta unilateral del parentesco si se realizaban casamientos dentro del mismo barrio, puesto que serían imposibles en grupos exogámicos patrilineales (o matrilineales): puede decirse que es más común seguir la línea del padre en la cuenta de la ascendencia, nada más.

CAPITULO VII

La Herencia Diferencial del Rango y los Calpullis

Falta saber cómo era la relación entre los clanes y los estratos sociales, que se presentaban indudablemente entre los *tenochca*. Hemos visto cómo el *calpulli* presentaba caracteres de clan ambilateral (parentesco por ascendencia común, cuenta ambilateral de este parentesco y tendencia a la endogamia). Vamos ahora a ver cómo otra de las características del clan ambilateral que ha hecho que se le llame "piramidal" [1], la desigualdad interna que contrasta con el carácter generalmente muy igualitario de los clanes exogámicos, también se presentaba en el *calpulli*. Esto es de mucha importancia porque la Tesis principal de uno de los grupos que ha estudiado la sociedad de los *tenochca* es que, como presentaban clanes —que para ellos eran sólo unilaterales y exogámicos (v. p. 16)—, tenían que ser igualitarios [2]. Contrariamente a ésto se puede demostrar que en el *calpulli* había una gran diferenciación interna de sus miembros, y no era, de ninguna manera, democrático e igualitario, sino altamente aristocrático.

Las pruebas para hacer esta afirmación la constituyen varias declaraciones de personas que vieron cómo funcionaba el *calpulli* poco tiempo después de la conquista o que tuvieron en sus manos documentos e informantes de que hoy carecemos. En primer lugar sabemos que "los comunes de estos barrios o *calpullec* siempre tienen una cabeza y nunca quieren estar sin ella, e ha de ser de ellos mismos e no de otro *calpulli*, ni forastero, porque no lo sufren" [3]. Esto nos quiere decir que los miembros de los clanes *tenochca* siempre tenían un jefe, que debía ser miembro de su mismo *calpulli*.

Esta diferencia entre jefes y gobernados, claro que se presenta siempre entre los miembros de todos los clanes; pero lo importante es que esta posición del jefe del *calpulli* era vitalicia y hereditaria, pues se afirma que muerto el cabeza de *calpulli* "elegían a otro, el más honrado, sabio y hábil a su modo, y viejo, y si quedaba algún hijo del difunto, lo eligen, y siempre

[1] Kirchhoff, P., 1949 p. 11.
[2] Bandelier, 1877, p. 389; Morgan, 1877, p. 205, etc.
[3] Zurita, p. 89.

[p. 70 is blank]

eligen pariente del difunto como lo haya y sea para ello" [4]. En otras palabras, se elegía un jefe cuando moría el anterior, y preferiblemente —según esta declaración— de su misma familia. Aunque según lo anterior parece nada más haber una preferencia para nombrar el jefe del *calpulli* entre miembros de la familia del jefe muerto, encontramos otras afirmaciones que nos hacen ver que el pertenecer a ella no era simplemente una preferencia, sino un requisito, puesto que el nuevo jefe tenía que ser principal [5], es decir, debía tener un rango anterior al desempeño de su puesto.

Ahora bien, ¿en qué consistía este rango? De seguro en tener una herencia determinada, como ya lo vimos anteriormente al hablar de la estratificación social (v. p. 26 y 27) y como se desprende además de la afirmación de que los cabezas o parientes mayores de los *calpullis* venían de muy antiguo [6], lo que implica que tenían antecesores semejantes a ellos, posiblemente principales también en consecuencia. Por otra parte los *calpullis* durante la migración venían guiados por capitanes [7] y entre ellos no venía gente de mucha cuenta, sino solamente unos principales [8]. Con ésto, junto con la afirmación de que se prefería a los parientes del jefe muerto, que era principal, y con la seguridad de que el ser principal era un rango trasmitido por herencia, podemos pensar que la herencia para ser jefe de clan se extendía —por lo menos por una línea de antecesores— a una época muy lejana: los principales jefes de *calpullis* eran miembros de las familias descendientes de principales de su mismo *calpulli*. Es decir, eran fuertemente aristocráticos.

Pero tenemos que tomar en cuenta que el *calpulli* era ambilateral y se fijaba en la herencia por ambas líneas: ¿qué acontecía entonces con la herencia de los principales en la línea materna? Por una parte se nos dice que las hijas de los principales acostumbraban casarse con personas de lugares alejados [9], que en general gozaban de bienestar económico [10]; por otra parte y concretamente refiriéndose a *Tenochtitlan* se afirma que los principales de los barrios dieron hasta veinte hijas a *Acamapichtli* para que con ellas tuviera descendencia y que de allí —de *Acamapichtli* y de las hijas de los principales— provienen los más y mayores de esta tierra [11]. Con todo

CUADRO ESQUEMATICO DE LA ORGANIZACION SOCIAL DE TENOCHTITLAN

La cercanía de cada persona a sus antecesores de clan, de sub-clan, de grupo de clanes o de tribu está representada en el esquema por la cercanía al vértice de cada pirámide. Esta cercanía determinaba su rango. El esquema muestra también el rango relativo de cada grupo de parientes en conjunto según su cercanía al vértice de la pirámide correspondiente.

[p. 74 is blank]

[p. 76 is blank]

CUADRO DE PARENTESCO DE LOS SEÑORES TENOCHCA

Los números romanos indican el orden en que fueron toatoanis o jefes supremos.
(a) indica que fueron tlacatecatl
(b) indica que fueron tlacochcalcatl
(c) indica que fueron cihuacoatl

1.—Los datos fueron tomados de diversas fuentes, principalmente del cuadro de Adrián F. León M. Las divergencias con otros datos no invalidan la conclusión previa de que eran parientes los principales señores tenochca.

ésto podemos pensar que por lo menos en algunos casos, una de las líneas de ascendencia de los principales de los *calpullis* —la línea materna— remontaba su herencia a la misma de los señores de *Tenochtitlan*. Y hasta es posible que en cada caso —teniendo en cuenta que en el clan ambilateral se trata siempre de mejorar el linaje por ambas líneas—, se diera preferencia para la sucesión en la jefatura del clan a los hijos nacidos de hijas de los jefes de *calpulli* y de los señores de *Tenochtitlan*, ya que los principales tenían como sucesores a los hijos de la mujer más principal con quien estuvieran casados [13]. Podría acontecer perfectamente que la señora más principal con que estuviera casado un jefe de *calpulli*, fuera hija de matrimonio entre alguno de los señores de *México* y alguna de las hijas de principales del *calpulli* correspondiente. Podemos decir, sin embargo, que no necesariamente había de ser el jefe de *calpulli* un descendiente directo e inmediato de los jefes de *México*, puesto que una vez adquirida su herencia por una persona, ésta la transmitía automáticamente. Sabemos a este respecto además que los *pipiltzin* "que es vocablo que quiere decir principales... son nietos y bisnietos de los señores" [14]. Bien pudo ser en consecuencia que los jefes de *calpulli* tuvieran por una línea —la del padre— principalmente la herencia de los antecesores del propio *calpulli*; y por otra —la de la madre— la herencia, quizá lejana, de los señores de *México*.

Ahora bien, las ligas de los principales de un *calpulli* con los principales de otros *calpullis*, y especialmente con los señores de todo el grupo *tenochca* —que también tenían su *calpulli* como hemos visto—, nos obliga a pensar en diferencias en el rango de los *calpullis* mismos. Cosa que por otra parte ya habíamos encontrado al hablar de la división del trabajo por *calpullis* (v. p. 49). Podemos obtener datos para complementar lo anterior y ver cuál era la situación a este respecto. El clan más noble sería indudablemente el clan al que pertenecían los señores de todo el grupo *tenochca*, que estaban siempre emparentados (v. el Cuadro de señores *tenochca*), y de éste todavía sería más noble el *tlaxilacalli* del propio *tlatoani*; y aún más, la familia más noble sería la própia familia del *tlatoani*.

Hemos visto que no todos los *calpullis* tenían *Calmecac* ("lugar del linaje de la casa" y escuela de nobles) sino que solamente eran seis. Esto nos lo confirma también Acosta [15]. La significación de ésto es muy clara: de seguro estos seis *calpullis* eran más nobles que el resto de los *calpullis*. Uno de ellos sería el ya citado como más noble; pero los cinco restantes serían otros, en posición seguramente inferior, pero le seguirían en rango. El resto

[13] Zurita, p. 74; Pomar, p. 25.
[14] Zurita, p. 91.
[15] Acosta, José de., p. 83.

de los clanes tendría de seguro una posición inferior a estos cinco clanes, formando el conjunto una verdadera pirámide de clanes de categoría, rango o nobleza diferente.

Se nos dice también, que cada uno de los cuatro "barrios" grandes tenía un jefe, como lo tenía cada uno de los *calpullis* [18]. Como vimos por otra parte que los jefes de cada *campan* estaban emparentados con los demás miembros de su *campan* (v. p. 32) podemos pensar en la existencia de un *calpulli* más noble en cada *campan* —cuatro en total— que muy probablemente serían cuatro de los que tenían *calmecac*. Por otra parte el *campan* donde estaba el *calpulli* más noble de todo el grupo *tenochca* sería de seguro más noble que los otros tres. Los *tecuhtlis* posiblemente eran los miembros más nobles de *Tenochtitlan* de cada *campan*, que eran tributados por miembros del grupo *tenochca*, pero ajenos a su clan, como el *tlacatecatl*, el *tlacochcalcatl*, el *tlatoani*, etc., cuyas funciones eran muy diversas, pero estaban conectadas con la vida del conjunto de la comunidad *tenochca*.

Se puede hacer un esquema en que aparezcan la estratificación de *campan* en todo *Tenochtitlan*, la estratificación de *calpullis* en cada *campan*, la estratificación de *tlaxilacallis* en cada *calpulli*, y finalmente la familia más noble dentro de cada *tlaxilacalli*. Es una organización esencialmente clánica, aunque unitaria. El *calpulli* aparece como una célula de *Tenochtitlán*, pero considerando que *Tenochtitlán* no tendría sino unas veinte de tales células. Ni la división social del trabajo, ni la distribución territorial, ni la propiedad de la tierra, ni la estratificación social por sí solas, pueden explicar por completo esta situación. En cambio, aparece relativamente sencilla si la consideramos como una organización clánica, basada en la diferencia de rango derivada de la cercanía de cada uno de los miembros del grupo *tenochca* a su antecesor de *calpulli*, a su antecesor de *campan* y al antecesor común de todo el grupo *tenochca*.

[18] Torquemada, I, p. 294.

CAPÍTULO IX

Posibilidad de otras Interpretaciones

El hecho de que todos los habitantes de *Tènochtitlan* pertenecieran a *calpullis*, de que los *calpullis* presentaran todas las características de clanes ambilaterales, con tendencia endogámica y "piramidales", y de que la propiedad de las tierras, la división social del trabajo, la división territorial y la estratificación social estuvieran determinadas por la existencia de estos clanes, nos indican que la Sociedad que encontraron los españoles en *Tenochtitlan* era "todavía" una sociedad basada en el parentesco por ascendencia común, pero con muchos rasgos de carácter económico. Claro que había relaciones surgidas de la producción económica —comercio, esclavitud, etc.— y es seguro que la organización social de *Tenochtitlan* era tan compleja por las necesidades que planteaban tanto la organización interna de una comunidad cultivadora con técnicas de horticultura, con abonos, riego, etc., como la organización de un verdadero imperio como el que tenían los [illegible]ca y que incluía posiblemente comunidades con base económica de riego, terrazas, etc. [1], como acontecía en mayor escala en las Sociedades típicas orientales del Viejo Mundo. Pero de todos modos parece que en México la organización social todavía no rebasaba los límites impuestos por la existencia de grupos correspondientes a uno de los tipos clánicos.

Por todo, parece que las dudas acerca de si los *tenochca* tenían clanes o acerca de si tenían clanes exogámicos, provienen solamente de la limitación de algunos investigadores en su concepto de clan, que no incluía a todo organismo basado en el parentesco por ascendencia común. Es útil, sin embargo, hacer algunos comentarios acerca de las razones que se han dado sosteniendo otras posiciones.

Todos los datos que hemos analizado encuadran bien dentro de este esquema que propongo para la Sociedad de los *tenochca*, y según he podido conocer, también la mayoría de los datos sobre esta Sociedad, que no se presenta aquí, encuadran en este esquema. Creo que también encuadran en

---

[1] Armillas, Pedro, 1947.

un esquema semejante muchos de los grupos de Mesoamérica [1] aún cuando muchos investigadores nos dicen que había "algo como castas" en pueblos como los *huaxtecas*, los *mixtecas*, los *zapotecas* [2] y los *tarascos* [4]; probablemente porque todos, y sobre todo estos últimos tenían casamientos endogámicos. También de los *tenochca* se ha dicho que muestran restos de un régimen de castas, por la misma razón [5]. Habría que decir que en realidad parece un régimen de castas —pero nada más lo parece—, por la endogamia frecuente. Sin embargo, varios caracteres faltaban entre los *tenochca* y de seguro también en todos estos grupos para caracterizarlos como organizados en castas: los *calpullis* (o los organismos con tendencia endogámica correspondientes de los otros grupos) deben haber sido de muy poca cantidad de gente, en tanto que las castas parecen ser verdaderas tribus, subdivididas en clanes exo- u endogámicos (en diversas castas); faltaban entre los *tenochca* (y seguramente en las otras tribus) las castas típicas de sacerdotes y guerreros (que en *Tenochtitlán* pertenecían a diversos *calpullis*), también había en *Tenochtitlán* cierta libertad de desarrollo individual que en las sociedades típicas de castas no existe, y no era muy estricta la división social del trabajo por *calpullis*. Por otro lado habría que decir, que el término "familia" usado por algunos investigadores para referirse a grupos ambilaterales, debe dejarse mejor para los grupos de parientes afines y consanguíneos formados alrededor del casamiento, pero no para grupos de personas unidas por su parentesco por ascendencia común, que es básico en los clanes. Los *otomíes* también tenían grupos semejantes a los *calpullis* [6], y de seguro su organización social era semejante a la de los *tenochca*. Con respecto a los *mayas* Roys nos dice que había clanes exogámicos [7] y al mismo tiempo que había clases sociales y que los nobles contaban su ascendencia por ambas líneas [8]. Creo por ésto que también, por lo menos entre los nobles, había grupos de tipo clan ambilateral.

Ahora bien, todos estos grupos llenan geográficamente en Mesoamérica el hueco dejado por Olson [9] y Beals [10] en sus mapas que abarcan todos los grupos sobre los que se ha podido encontrar con seguridad que tenían clanes exogámicos, lo que indudablemente respalda la posición sostenida en este

TRIBUS MESOAMERICANAS QUE POSIBLEMENTE TENIAN CLANES AMBILATERALES Y CON TENDENCIA ENDOGAMICA

Sobre estas tribus se mencionan datos que nos hacen pensar que tenían clanes del tipo del calpulli. Quizás también los tenían los grupos lingüísticos intermedios. Los límites marcados son lingüísticos, basados en el Mapa de distribución prehispánica elaborado por W. Jiménez Moreno y M. Othón de Mendizábal (1939).

[P. 82 is blank]

[P. 81]

trabajo, tanto con respecto a los *tenochca*, como con respecto a estos otros grupos que parecían ser semejantes a ellos.

Otro de los argumentos generalmente aceptados contra la Tesis de que los habitantes de *México-Tenochtitlan* tuvieran clanes, consiste en la afirmación de que desde mucho antes de la llegada de los españoles habían desaparecido [11]. Pero si nosotros analizamos la autoridad que invocan para apoyarse encontramos que, en primer lugar no habla de los *tenochca* y en segundo lugar no da base para afirmar la pretendida desaparición de clanes ni aún para las comunidades a que se refiere: basan su afirmación estos autores en una referencia a que *Tochotlalatzin*, señor de los *chichimecas*, "repartió el suelo de toda la tierra en parcialidades de tal manera que en cada pueblo, conforme a la cantidad de gente que tenía así hacía la repartición de las gentes; de tal manera que si en un pueblo *tecpaneca* había seis mil vecinos, sacaba los dos mil de allí y pasábalos a otro pueblo *metzoteca* o *chichimeca*, y de aquel pueblo *metzoteca* sacaba los dos mil vecinos que había traído y los pasaba al pueblo *tecpaneca* de donde los otros había traído. Y si el pueblo tenía dos mil sacábales el quinto y pasábalos a otra nación contraria y de aquélla sacaba el mismo número y pasábalo a esa otra parte donde aquél había salido; y el señor *tecpaneco* que lo era de aquel pueblo donde había sacado los dos mil vecinos, aunque no los tenía en el mismo pueblo, reconocíalos por suyos en la otra parte donde estaban, y lo mismo hacían el *culhua*, el *metzoteca* y el *aculhua;* de manera que aunque tenía el mismo número de gente señalado, no los tenía todos en las partes de su señorío, sino mezclados unos con otros" [12]. Esto no puede indicar que se habían roto entre los *tenochca* los clanes, pues en primer lugar el dato se refiere a grupos distintos de los *tenochca* (a los *metzotecas*, etc.) y sólo nos pueden aclarar o complementar otros indicios, pero no puede servir como base para afirmaciones de esta naturaleza. Pero además hay otro argumento en contra de la posición que criticamos: no podemos decir que los *metzotecas*, *culhuas*, etc., formaran cada uno un solo clan, que era el que se desmembrara, siendo por el contrario, que en caso de tener clanes, habría varios en cada uno de estos grupos (varios entre los *metzoteca*, varios entre los *culhuas*, etc.). Podemos agregar que si lo que unía con su señor a las gentes trasladadas, eran los lazos de parentesco, se nos dice claramente que no se rompían. Y finalmente hay que decir que en casos posteriores en que se usó el traslado de gentes, éste se hacía tomando en cuenta la "parcialidad" y la "generación" de las gentes trasladadas, lo que probablemente era, en términos generales,

---

[11] Hernández, Rógulo, 1951, p. 60 y Freund, Georg, 1944.
[12] Tezozomoc, I, p. 89.

tomando en cuenta los clanes. Con estos datos no podemos saber nada acerca de la existencia de los clanes, ni de esas comunidades, ni de los *tenochca*.

Es común que se diga que los *calpullis* no eran clanes —es decir, clanes exogámicos— sino restos de clanes exogámicos [13]. El único apoyo de esta suposición es que siendo los *calpullis* organismos que presentaban algunos caracteres de los organismos basados en el parentesco por ascendencia común; pero no siendo estos caracteres iguales a los de los clanes exogámicos, no se podía tratar de ellos sino de sus restos. Creo que sería extraordinario encontrar en las fuentes de la Historia de México argumentos para probar que los *calpullis* eran restos de tales clanes. En la actualidad encontramos muchas comunidades que muestran caracteres que recuerdan organismos unilaterales y exogámicos [14]; pero no se parecen a lo que sabemos que eran los *calpullis* de *Tenochtitlan* en el siglo XVI, ni los de *Tepoztlán* en el siglo XX, a pesar de haber sufrido los posteriores a la conquista una influencia mucho más destructora que la que podían haber sufrido los *calpullis* si es que en Mesoamérica había grupos con una estructura social distinta y más avanzada desde antes de la época de la conquista. Solamente en el caso de que no hubiera trazas de que los *calpullis* fueran clanes ambilaterales y con tendencia endogámica, habría que pensar en la posibilidad de que fueran restos de clanes exogámicos.

La reducción local de los *calpullis* ha sido otro argumento en contra de la existencia de clanes en la comunidad que estudiamos [15]. Pero esto no puede ser de valor, ni aún como argumento de que fueran clanes exogámicos, puesto que tenemos innumerables tribus, inclusive con clanes exogámicos en las cuales individuos de un sexo determinado están reducidos localmente, indicando solamente que también tiene influencia su organización clánica para determinar la ubicación. En el caso de tribus como los maoríes, con *clanes* ambilaterales, la reducción local se extiende a los dos sexos —como en el *calpulli*— y no por esto va a negarse la importancia del parentesco por ascendencia común en su organización social.

También la división del trabajo por *calpullis* ha sido presentada como un argumento contra la tesis de que los *calpullis* fueran clanes [16]. El razonamiento para combatir esta posición es sencillo: si los miembros de un *calpulli* mostraban caracteres de miembros de un clan, puede ser que estos caracteres de clan hayan determinado la división social del trabajo; pero no es

---

[13] Kroeber, A. L., 1923, p. 357 y 360; Moreno, M., 1931, p. 14-16; Radin, P., 1937, p. 108; etc.

[15] Kroeber, A. L., 1923, p. 357-358, nota.

[16] Kroeber, A. L., ibid.

posible pensar que la división social del trabajo determinó sus caracteres de parentesco por ascendencia común. Como en el caso de la reducción local, ésto querrá decir nada más que la organización clánica determinaba también la organización del trabajo.

La existencia de una fuerte estratificación social [17] y de la propiedad territorial [18] tampoco son una prueba en contra de que los *tenochca* tuvieran clanes, puesto que encontramos en tribus de todo el mundo casos en que características de los grupos ambilaterales señalan la existencia de fuertes estratos sociales, como sucedió entre los maoríes [19] y los incas [20]. El argumento de la existencia de los estratos sociales puede utilizarse muy efectivamente contra la idea de que los *tenochca* tuvieran una organización clánica exogámica, pero no basta para negar que tuvieran gran importancia los lazos de parentesco por ascendencia común en la determinación de las relaciones sociales, aún como elementos básicos, en forma de clanes ambilaterales, con tendencia endogámica y estratificados.

La ausencia de totemismo ha sido usada también contra la idea de que los *tenochca* tuvieran clanes [21]. Esta no es ninguna prueba, porque habiendo inclusive clanes exogámicos sin totemismo, los *calpullis* hasta podían haber sido clanes exogámicos (aunque no lo fueron) sin que se presentara totemismo.

La semejanza entre la gens griega, el nomo egipcio, etc. y el *calpulli* ha sido esgrimida también como argumento en contra de la tesis de que entre los *tenochca* había clanes [22]. Habría que probar, por una parte, la semejanza entre estos organismos, lo que no se ha hecho, y habría —por otra parte—, que probar que ni la gens ni el nomo tenían sus bases en el parentesco por ascendencia común, lo que tampoco se ha hecho. Además, si tomamos en cuenta que la gens griega ha sido considerada por muchos autores como un clan y que aún posiblemente era un clan ambilateral, la semejanza entre el *calpulli* y la gens reforzaría la posición de que el *calpulli* era un clan.

Realmente en contra de la misma existencia de los clanes no se han aportado pruebas, siendo la más general y la de más valor la supuesta posibilidad de probar que las relaciones sociales de los miembros de las comunidades del centro de México, entre las cuales estaba la *tenochca*, tenían sus bases en la división territorial, en la propiedad de la tierra o en la producción de

objetos, cosas que ya vimos que estaban dentro de los límites de la organización basada en el parentesco por ascendencia común. También se ha dicho que el Gobierno *tenochca* tenía caracteres de "Estado" [29]. Contra ésto sólo podemos oponer dos afirmaciones: una es que hay pruebas suficientes de que entre los *tenochca* las relaciones sociales principales estaban basadas en fenómenos de parentesco por ascendencia común; otra es que hay pruebas de que los estratos sociales de la comunidad *tenochca* no eran clases sociales, y que por lo tanto su Gobierno no podía tener el carácter de "Estado" si por ésto queremos dar a entender que tenía un carácter clasista y no "gentil".

CONCLUSIONES

[p. 87]
[p. 88 is blank]

CAPITULO X

El Estado Evolutivo de la Sociedad de los Tenochca

Vamos ahora a ver concisamente cuáles son las conclusiones obtenidas acerca de las cuestiones planteadas al iniciar esta investigación de acuerdo con las posibilidades teóricas de que disponemos actualmente, y vamos a tratar de expresar el estado evolutivo de la sociedad de los *tenochca* de acuerdo con tales conclusiones.

Sintetizando nuestros datos podemos decir que:

a) los *tenochca* tenían organismos permanentes —los *calpullis*— basados en el parentesco por ascendencia común de sus miembros, es decir, organismos que reunían las premisas necesarias para aceptar que entre los *tenochca* había indicios de clanes.

b) Podemos decir también que tomando en consideración las distintas formas que pueden adoptar los clanes, los indicios que tenemos respecto a los clanes de los *tenochcas* nos los muestran como clanes ambilaterales, con tendencia endogámica, entre los cuales, por tener como principio formativo el contar la cercanía del parentesco con los ascendientes, se presentaba una fuerte diferenciación interna, una verdadera pirámide de rangos y de posiciones económicas estando en la posición más alta los jefes de *calpulli*.

c) podemos decir que hay muchos indicios de haber habido una diferenciación del rango de clanes íntegros, habiendo uno principal al que pertenecían los jefes de todo el grupo *tenochca*.

d) podemos decir que hay indicios también de que la diferenciación interna de los rangos de cada clan estaba ligada íntimamente a la diferenciación de clanes íntegros en todo el grupo *tenochca*, por la realización de casamientos entre miembros de diversos clanes.

e) podemos decir, finalmente, que hay indicios muy numerosos de que las principales relaciones sociales de toda la población *tenochca* estaban de-

terminadas por estos organismos de tipo clan ambilateral, con tendencias endogámicas, y muy estratificados. Entre estas relaciones determinadas por la existencia de los clanes estaban principalmente: 1º La estratificación social, que no era independiente de la organización en clanes, aunque había hecho pensar a muchos investigadores que eran verdaderas clases sociales, o principios de clases sociales. 2º La división social del trabajo, no sólo manual, que había hecho pensar a algunos autores que entre los *tenochca* había gremios. 3º Las formas de la propiedad de la tierra, salvo dos excepciones (las parcelas de los valientes *macehuales* y las de los nobles no sujetas a vínculo determinado), que había hecho pensar que era la propiedad de la tierra la base de las supuestas diferencias de tipo clasista. 4º La división territorial de la población.

Podemos por lo tanto afirmar que entre los *tenochca* había clanes hacia la llegada de los españoles; pero que estos clanes no eran de la naturaleza de los clanes unilaterales, exogámicos e igualitarios, que han servido generalmente como ejemplos de clanes, sino que eran clanes ambilaterales, con gran tendencia a la endogamia y fuertemente estratificados, por tener como principio básico el contar la cercanía del parentesco de sus miembros con los antecesores comunes.

Ahora bien, ¿qué significa todo ésto desde el punto de vista del estado evolutivo de la sociedad de los *tenochca*? Son varias las consideraciones que podemos hacer a este respecto: en primer lugar, que los *tenochca* no estaban en el mismo estado evolutivo que los iroqueses u otros grupos semejantes, cuya estructura es igualitaria y democrática, sino que presentaban una fuerte estratificación interna y externa y eran fuertemente aristocráticos. En segundo lugar, podemos decir que los *tenochca* no estaban en la misma línea evolutiva de los clanes exogámicos, cuya estructura no les permite avanzar mucho por evolución interna, sino que estaban los *tenochca* en una línea evolutiva de clanes ambilaterales que ha sido siempre susceptible de sufrir grandes cambios. En tercer lugar podemos decir que estos cambios —principalmente en el sistema tributario—, pero también en el clánico —de hecho estaban ocurriendo en la sociedad de los *tenochca*, y que entre ellos tenemos principalmente: a) la iniciación de la separación de dos estratos hereditarios —los *pillis* y los *macehuales*— de tipo estamental simplemente; b) la iniciación de la división social del trabajo por grupos de tipo gremial, simplemente; c) quizá la iniciación de la división territorial basada en la ubicación personal —como parece que ocurría con los valientes no tributarios y con los dueños de las tierras enajenables—, y d) la iniciación de la propie-

dad no comunal y enajenable —como era la de los nobles no sujeta a vínculo—. En cuarto lugar hay que hacer notar que la iniciación de los cambios evolutivos permitidos por la estructura de la sociedad *tenochca* básicamente formada por clanes, era realmente apenas una iniciación, y que no había llegado todavía a constituir una estructura que pudiera llamarse ni siquiera estamental, ya no digamos clasista. Hay que hacer notar también que entre los *tenochca* no se presentaban las premisas de productividad del trabajo y de adelanto técnico que permitieron en otros puntos de la tierra la aparición de los estamentos y de las clases sociales, ya que entre los *tenochca* a) no había grandes obras de irrigación ni de cultivo intensivo, aunque se contaba con cultivo de azada muy avanzado con técnicas de horticultura (abono, selección, etc.); b) se desconocían las máquinas en su totalidad; d) no había animales domésticos que permitieran una gran acumulación de riqueza, etc. Por otra parte, tampoco había las posibilidades de que estas premisas técnicas fueran a obtenerse en un futuro muy cercano, aunque eran indispensables para una evolución posterior. Hay que decir también que la vida de los *tenochca* tenía una base económica de cultivo, de especialización artesana y de división del trabajo, muy suficiente para permitir y exigir una estructura social tan compleja como aparece en los datos, y que las relaciones económicas eran de una importancia fundamental para la vida social del grupo; pero es indudable que todavía no habían llegado a tener suficiente fuerza para romper los límites de una organización basada en el parentesco por ascendencia común.

Claro que ver a la sociedad de los *tenochca* —como se ha hecho en este trabajo— aislada de los grupos con quienes sostenía relaciones comerciales y de los grupos con quienes sostenía relaciones tributarias para lograr casi una vida parasitaria a su costa, es verla muy fragmentariamente. Lo mismo puede decirse de que no se haya hecho un estudio completo de todo el proceso de evolución de la sociedad de los *tenochca*. Pero precisamente el haber encontrado que la sociedad de los *tenochca*, en su posición dominante, todavía no había cambiado su estructura clánica, ni aún gozando de un bienestar económico de que no gozaban otros grupos contemporáneos, nos refuerza en la idea de que todavía no había alcanzado un grado de evolución semejante al de las altas culturas de tipo oriental como la India, Egipto o China. Por otra parte, tenemos que pensar que en caso de que la sociedad de los *tenochca* hubiera seguido su evolución interrumpida por la llegada de los españoles, a lo que hubiera llegado, es precisamente a un estado evolutivo semejante al de tales civilizaciones, no basándose en grandes obras de

irrigación, sino en el cultivo de terrazas, de jugo y de riego en pequeña escala.

La forma típica de aparición de las clases sociales —la de Grecia— es precisamente la iniciación de los rompimientos de los límites hereditarios de la estratificación social en estamentos. En México se inició un rompimiento de los clanes y de la estratificación hereditaria asociada a ellos solamente hasta la llegada de los españoles, y no por evolución interna, sino por imposición, de un modo brusco, y se fue generalizando la nueva organización social de un modo regular y paulatino con la introducción de las nuevas formas de producción: los españoles no aceleraron un proceso interno ya iniciado en la sociedad de los *tenochca*, sino que introdujeron formas a las que se pudieron adaptar fácilmente varios de sus procesos internos.

HISTORICAL GEOGRAPHY

121 It would be too much to pretend that the high cultures of Middle America depended on lakes for their development, but lakes are of extreme importance to domestic economy wherever they exist, and the role they have played in shaping culture has not been insignificant. The lakes of Mexico and Central America have not only played this role to a degree that is out of the ordinary, but they are part of a scene that has no parallel, either in importance or in drama, in the entire history of western culture. New lands and strange peoples had been discovered before 1519, and the astonishing fact of the existence of "primitive" societies was not at all new to western thinkers who had read Herodotus. What the 16th-century Spaniards found in Middle America, however, was something altogether new and totally unexpected: a new civilization, with all that the term implies. The Aztecs and the Mayas lived in cities, and performed great engineering feats; they had a developed art and literature, and a body of scientific knowledge at least as well founded as that of Egypt; their scholars were interested in history, and demonstrated in elaborate ceremonials a philosophy that was highly sophisticated (repellantly so to the Spaniards, of course) on the theological side.

The impact of these facts was quickly muffled by Spain's closed-door policy for the Indies, and dwindled almost to nothing in the exciting centuries that followed the Spanish Conquest. It is only in our own day that the full meaning of the Middle American civilization is becoming apparent, and historians, aware of the powerful tool that the comparative method provides, have seen the necessity of comparing *independent* civilizations and the cultural lineages that produced them. Such a comparison is the best way, perhaps the only way, to deduce laws of societal evolution, and Middle America provides the only phyletic series of cultures outside the Old World that was independent enough, and progressed far enough, to be useful.

121 127 An investigation of the history of Mexican limnology (and the

[p. 220]

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

limnology of Mexican history) has a small but not negligible part to play in the writing of the general history that is needed. In what follows we present some notes on the subject, but it has to be said at once that the state of scientific knowledge among the aboriginal Middle Americans can probably never be satisfactorily appraised. The reason is, of course, that most of the written sources have disappeared. Only a handful of genuine pre-Conquest manuscripts have been preserved, while many are known to have been wantonly destroyed as heretical. Copies of some of them, probably fairly accurate copies in some cases, were made shortly after the Conquest. Numerous histories were written by learned and intelligent friars, using these documents and other sources of information that have since disappeared in their turn. For some purposes, as for reconstructing tribal movements and genealogies, particularly those within a couple of centuries of 1519, it matters little that the records are copies, as Radin (1920) has shown. The events they show are real enough, and their historicity has in general been confirmed by archaeology. For events that were more remote in time and space from the memories of the educated natives who set them down, the validity of the records is highly problematical, and the documentary history of Toltec times is "una inextricable maraña", as Mendizábal (1947) called it.

Ideas are much easier to garble than events, and the reconstruction of Middle American science involves a distressing amount of that sterilizing activity, the history of historiography. That is, confronted by the fact that the native ideas have filtered through the minds of Europeans, we must investigate the quality of those minds before we can get on with the subject. This difficulty is particularly apparent to the historian of limnology, in that the earlier writers were singularly uninterested in lakes and ill-informed about them. No doubt this is because they came from Spain, the one country in Europe that is least likely to have produced a limnologically minded historian. Whatever the reason, the data reported below are as fragmentary as they are fascinating. At most one can hope to have it said, as Prescott (n. d.) said of Veytía, "Every page bears testimony to the extent and fidelity of his researches; and, if we feel but moderate confidence in the results, the fault is not imputable to him, so much as to the dark and doubtful nature of the subject."

AZTEC LIMNOLOGY

For knowledge of limnology among the Aztecs, as for all matters concerning Aztec customs and beliefs, one turns first to the great *Historia general de las cosas de Nueva España*, by the Franciscan friar

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

127 Bernardino de Sahagún (1499–1590), who came to Mexico in 1529. It is unfortunate that there is still no complete edition of this work in a European language. The Spanish version, written by the author toward the end of his life, was not published until the early 19th century, and is in part a condensation of the Nahuatl work written about 1547. This is particularly true of Book Eleven, which contains most of the natural history, and has therefore attracted less attention from scholars than the books dealing with ceremonies and the calendar. The edition by Anderson and Dibble (1950–54), which gives Nahuatl and English in parallel columns, has not yet reached Book Eleven, so we must rely on the 1938 Robredo edition of the Spanish text, while the illustrations
127 are to be found in the Madrid edition of 1905–07. Sahagún's vertebrate
136 zoology has recently received careful treatment at the hands of Martin del Campo (1938, 1940, 1941). Some of the flavor of his ornithology can be given by "listening to the mockingbird" (actually the curved-bill thrasher, *Toxostoma curvirostre)* when he sings in Nahuatl:

"There is a bird in this country called *cuitlacochtótotl* or *cuitlacochin;* it has longish and slender feet, and a thin and sharp beak, somewhat
[825] curved; it is of a muddy color, tending toward purplish; it sings very well; it is so called by reason of its song, which says *cuitlacoch, cuitlacoch, taratitarat, tatatati, etc.*" (Robredo edition, vol. 3, p. 189).

127 Sahagún's botany will not be discussed here, since it appears not to bear significantly on limnology. It is treated from the medical point of view by Alcocer (1938) in an appendix to the Robredo edition. Aztec medical botany, however, is much more thoroughly covered in Emmart's magnificent edition (1940) of the de la Cruz-Badianus herbal of 1552, and in a memoir by Paso y Troncoso (1886), while Sahagún's general botany is competently treated by Rivera (1941).

A general impression of Sahagún's work is that it is the achievement of a man who knew no natural history when he came from Spain, but whose consuming passion for all things Mexican drove him to learn and record all he could from native informants. If so, we are entitled to read between the lines an enormous amount of information that was not recorded. It is of course no new discovery that "primitive" people are very skilful naturalists. Raymond Paynter informs me that more kinds of Yucatecan birds are named in modern Maya than in Latin, and ethnographers have repeatedly found natives to be better naturalists than themselves. This does not diminish the fact that the lacustrine flora and fauna were exceedingly well known to the Aztecs of the Valley of Mexico, many of whom spent most of their lives in canoes and depended on limnologic knowledge for their livelihood. And, though the available sources emphasize the economic basis of this knowledge, so that "comenlos"—"they eat them"—is a monotonous refrain in

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

Sahagún, it does not follow that Aztec limnology was exclusively motivated by exploitation. Scientific curiosity in the modern sense was not a dominant quality of 16th-century Spain, and the stress on practical matters is at least as likely to be a property of the Spanish as of the Aztec mind. Moreover, as Maldonado-Koerdell (1946) points out, an essential basis of Aztec interest in natural history, at least in vertebrates and plants, was magical and totemic. 127

FAUNA. It is characteristic, and exasperating, to find that Sahagún's Chapter 12 "De las diversidades de las aguas" discusses the sea, the rivers, and the springs, and omits the lakes. A much more impressive amount of limnologic information is given in Chapter 2, with its list of 41 aquatic birds, practically all of which can be identified (Martin del Campo, 1940). Nahuatl names and brief descriptions are given, but what is more important is that food habits are listed for nearly every species, and that most of them are illustrated. Chapter 3 deals with aquatic animals, including crustaceans, turtles, amphibians (including the axolotl), the marine iguana, and a disappointingly short list of fishes. Crocodiles are separated off with several mythical water creatures in Chapter 4, "De otras animales del agua que no son comestibles". Since Sahagún wrote in the century of Gesner, we need not be surprised to find a certain amount of credulity displayed; the account of the *yacapitzauac* or *nacatzone*, a bird (the eared grebe, *Colymbos nigricollis californicus*) that subsists on its own feathers, is particularly enchanting. 127 136

Fishing on Lake Texcoco is probably not what it was before the Valley lakes were finally lowered in 1900, but statements that the salt lake is lacking in fishes are erroneous. At the time of the Conquest, the Anonymous Conqueror remarked "in the sweet water there are some small fish; in the salt part they are still smaller" (1917 edition, p. 59). Cortés, on the other hand, tells us that the fisheating birds in Montezuma's menagerie were fed daily on two hundred and fifty pounds of fish, caught in the salt lakes (MacNutt edition, 1908, vol. 1, p. 266). The two statements do not conflict, since small but numerous members of the families Atheriniidae and Goodeidae were doubless the staples of the fishery. The aboriginal methods of fishing may be seen within a few miles of Mexico City today, as Linné shows (1937, 1948). All are illustrated in the Florentine Codex, i.e. the work of Sahagún, and in the fascinating pictures that decorate the mid-16th-century map "attributed to Alonso de Santa Cruz", now in the library of the University of Uppsala. This map serves as the focal point of Linné's remarkable book (1948), which synthesizes archaeologic, historic, and ethnographic knowledge into a convincing picture of the Valley of Mexico in 1550. 127 136 226 127

The fishing methods include rod-and-line, nets of two of three sorts, 226

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

127 226 and spearing. It is not certain that the rod-and-line method involved fishhooks, for these are not known archaeologically from the Valley, but the line may have carried a gorge instead of a hook, and in any case *golden* fishhooks were found in use in 1518 by Grijalva on the island of Cozumel. The types of nets used are the gill net, the pole net, and possibly the throw-net; the latter was used for rabbits but may not have been used for fish. Spearing is of particular interest to ethnologists, because Mexico is one of the few places in the world where the atlatl is still in use. This fact was discovered on Lake Pátzcuaro by Seler in 1892 and on Texcoco by Beyer in 1925.

127 223 Water birds are mainly hunted in the fall and winter, when migrants swell their numbers. On Pátzcuaro the Tarascans surround them with canoes and kill them with tridentiform atlatls, as described by León (1934) and Foster (1948), but in the shallower lakes of the Valley the birds are caught in long nets stretched just above the water. This practice is fully depicted in the two 16th-century pictorial sources, and survives today (Linné, 1940).

127 262 Exploitation of the Valley lakes for animal food was not restricted to fishing and fowling. If it had been, we should have no reason to impute any special limnologic knowledge to the Aztecs, but the use they made of their lacustrine environment goes far beyond that of the usual "primitive" society. In addition to tadpoles and frogs, and the axolotl, of which Sahagún says "es muy bueno de comer; es comida de los señores", the historian lists a number of invertebrate foods in Chapter 3. These items of diet have bewildered most subsequent writers, and without a thorough ethnographic survey it is impossible to be sure that the following remarks are not compounding the confusion. However, there are certain points that a limnologist finds obvious and that have been missed by all the authorities. In discussing the invertebrates we rely not only on Sahagún and the relevant illustrations in Plate I, but on Hernandez' *Historiae animalium et mineralium Novae Hispaniae liber unicus*, written in the 1570's and appended to the 1651 Rome edition of the great work on Mexican medical botany.[2]

127 [2] Mrs. Emmart, in her edition of the de la Cruz-Badianus herbal (1940), remarked that the five copies of Hernandez' work that she was able to collate are all of different editions, though all bear the year 1651. Presumably these all have the title *Rerum medicarum Novae Hispaniae Thesaurus*, but the copy in the Yale University Library, also imprinted 1651, is entitled *Nova plantarum, animalium et mineralium Mexicanorum Historia*. In any case this is a very incomplete version of what must be the greatest work on Mexican natural history ever written. Hernandez' Latin work ran to 15 or 17 volumes, and is believed to have been destroyed in the fire at the Escorial in 1671. George Kubler informs me, however, that a Nahuatl translation was made by 1576, and this or a copy of the original may yet come to light.

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

The most famous of the edible invertebrates is the *axayácatl*, referred to as *axaxayácatl* by Sahagún and Hernandez. Although modern writers (Vaillant, 1941; Apenes, 1943; Linné, 1948; Anderson and Dibble, 1954) persist in calling these insects flies, it has been known for more than a century that they are corixid waterbugs. Sahagún's Spanish word was *coquillo*, not *mosco* or *mosquillo*, so the confusion is not his fault. In post-Conquest times the dried adult insects have been widely sold in the markets of the world as food for caged birds, but they were also used as human food; Hernandez says that they were cooked in maize leaves in nitrous water. Hernandez also makes it clear that these insects are the source of *ahuautli*, a cake made from the eggs that is still much eaten in Mexico, particularly on watch-nights such as Christmas Eve and Holy Thursday. That *ahuautli* was formerly a staple that survives as a delicacy is suggested by its name, which is derived from *atl*, water, and *huautli*, amaranth seed. Now that Sauer (1950) has cleared up some of the indescribable confusion surrounding the use of grain amaranths in aboriginal Mexico, we can begin to appreciate that *ahuautli* was really "water grain", though not in the literal sense of "water wheat" implied by Tylor (1861), whose etymology has confused such later writers as Packard (1871). The identity of the insects is an equally tangled bibliographic problem in which the zoologists have hardly been more helpful than the historians. 127 136 252 262

The fullest and most authoritative-sounding account is that of Orozco y Berra, given in his memoir on the hydrography of the Valley of Mexico (1864). This historian quoted in full de la Llave's description (1832; reprinted 1887) of the adult insect under the name *Ahuautlea mexicana* (which appears to be the correct name, though it has been ignored by zoological writers; it has priority over the generic name *Krisousacorixa* Hungerford 1930 and the specific name *Corixa femorata* Guérin-Meneville 1857). He described the cultivation of *ahuautli*, which is accomplished by placing bundles of *tules* (*Scirpus* or *Typha*) in the water of Lake Texcoco, stripping off the eggs which the insects lay in countless millions, and processing them into cakes. This much of Orozco y Berra's work is correct; it is fully confirmed by the modern observations of Ancona (1933), and, if there is any doubt that the practice is an aboriginal one, the doubt is removed by Sahagún's figures, reproduced in Plate I, nos. 220–221. Professor Hutchinson assures me that no. 220 is certainly the oldest known figure of a corixid waterbug. Oddly enough, Sahagún does not describe the practice or mention *ahuautli* with the edible insects in Book Eleven, though he lists it among the products sold in the market in the 19th chapter of Book Eight. Hernandez repairs the omission. [222]

Ancona's account (1933) is the only one by a modern zoologist, and 127 136

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

127 suggests that the *axayácatl* is ordinarily *Krisousacorixa azteca* Jaczewski,
136 1931; it may also be *K. femorata* (Guérin-Meneville, 1857), while *Corisella texcocana* Jaczewski and *C. mercenaria* (Say) may be less important components of the market product, along with the backswimmer *Notonecta unifasciata* Guérin-Meneville. Which species contributes most eggs to *ahuautli* is not made clear even by Ancona's paper, although it is certainly one of the species of *Krisousacorixa*.

Unfortunately Orozco y Berra went on to confuse the issue by discussing the *cuculin*. This word does not occur in Sahagún's text, so far as I have been able to discover, though it is mentioned by Hernandez, by Alvarado Tezozomoc (Orozco y Berra's edition, p. 236), and by Pomar in his *Relación de Tezcoco* (García Icazbalceta's edition, 1891, p. 59). Orozco y Berra considered it to be composed of "nests" of the "larvae" of the *axayácatl*, which come to the surface under circumstances unknown and are scooped from the water and made into cakes. The "larvae", furthermore, are said to be eaten as *puxi*, so that the miraculous corixids are eaten in four different forms under as many names. Corixids, of course, have neither larvae nor nests, and it appears that Orozco y Berra attributed to the *axayácatl* some of the properties of the insect products *cuculin* and *izcauitli* and of the vegetable product *tecuitlatl*. I have not traced the word *puxi* back of Orozco y Berra, but the *cuculin* and the *izcauitli* appear to be pupal and larval stages, respectively, of a salt fly, probably *Ephydra bians* Say. Sahagún describes the *izcauitli* as having "no head, but two tails, and reddish", and the featureless animals shown in Plate I, no. 223, certainly do not disagree with that description.[3] At the risk of introducing still another false etymology I suggest that the name itself has something to do with salt, *iztatl*, but in any case Pomar's description, in the *Relación de Texcoco*, written in 1582 and published by García Icazbalceta in 1891, leaves little doubt that a salt fly is meant: "There grows another sort of food called *ezcauhitli*, which is made of certain little grubs like earthworms, so slender and so pullulent in their multitude and density, that one can scarcely judge whether or not the substance is alive" (p. 59). Salt-fly larvae are almost the only grubs that would occur in such quantities in

[3] In the original codex (of which there is a photostatic copy in the Yale library) the illustrations are interlarded with the Spanish text, and not separated as in the published editions. This arrangement is of little help in identifying the animals, as the association of pictures and text appears to be arbitrary, probably through the copyist's mistake. Thus, while Figure 223 stands with the *ocuiliztac*, making it conceivable that this, and not *izcauitli*, was Sahagún's word for Ephydrid larvae, Figure 220 stands with *aneuezili*. The subsequent paragraph on *axaxayácatl* contains Figure 221, making it clear that the location of Figure 220 is a mistake.

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

a salt lake, and Aldrich (1912) gives a graphic account of *Ephydra gracilis* Packard on the Great Salt Lake, Utah, and of *Ephydra hians* on Mono Lake, California. The latter are not only collected in quantity and eaten by Paiute Indians, but were bred out of supposed "larvae" of the *axayácatl* of Lake Texcoco by Peñafiel (1884) and identified by Williston, who referred to Peñafiel's specimens in 1883 and again in 1896. Even Ancona overlooked the fact that Peñafiel's larvae could have nothing to do with a corixid, so that Aldrich's remark, "it seems that the Diptera and the Hemiptera are mingled together in the quotations", is an understatement. 127 136

The pupae of ephydrids come to the surface and undergo mass emergence, and it is then (in September) that they are collected and processed as *kootsabe* by the Paiutes of Mono Lake. In all probability this is the product that the Aztecs called *cuculin*. (The words sound distantly related, which is not inconceivable, as Paiute is a member of the Uto-Aztecan linguistic group). The substance is definitely confounded with *tecuitlatl* by Orozco y Berra, however, and the suggestion that it is made of the pupae of *Ephydra hians* is made with due hesitation. As Aldrich said, "only an investigation by an entomologist at the lake can clear up the confusion" (1912, p. 92). Though Sahagún does not mention *cuculin*, nos. 224 to 227 in Plate I appear to depict stages in its manufacture, or in the collection of the larvae, *izcauitli*.

The puzzling stuff called *tecuitlatl* is mentioned by Sahagún in Book Eight, and listed (as *tecuiltlatl*) with the lower animals in Book Eleven. He describes it as *"urronas"* (*"urrosas"* in Lord Kingsborough's edition (1831–48), but neither form occurs in any dictionary I have consulted nor does my own reading "orroras") which grow on the water, have a purple color, and are harvested, dried on mud, and made into cakes. Anderson and Dibble translate the Nahuatl word as "scum", and the material is probably algal. Pomar (García Icazbalceta's edition, p. 59) refers to it as "green sheets that grow, which, when made into a cake and baked, take on a dark green color, and which the Spaniards call *queso de la tierra*". Hernandez, who lists it among the minerals, confirms the purple or green color ("color adhuc recenti cyaneus, aut viridis"). López de Gómara, who was never in Mexico, but who published in 1552 a delightful book on the Conquest that has been a best-seller for four hundred years, adds the suggestive detail that the substance (which he does not name) was gathered on "threshing floors" (*eras*) like those in which salt is made. He said that it is eaten as we eat cheese, and described its flavor as salty, but very good with *chilmolli* (1943 edition, pp. 238–239); continuing with the sonorous text of the first English edition (1578, reprinted in facsimile 1940) from 127 136 222 252

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

127 which the above details are omitted, "yea, and they holde opinion that
136 this skume or fatnesse of the water, is ye cause that such great number
222 of foule cometh to the lake, which in the winter season is infinite."
252

Linné (1948), who considers that the substance was an alga that is
127 no longer used, identifies it with the cakes that Bernal Diaz del Cas-
136 tillo saw being sold in the market at Tlatelolco, and which he described
252 as having a cheeselike flavor (1928 edition, p. 300). It is not im-
262 probable that Diaz' cakes were made of corixid eggs, *ahuautli*, and it is conceivable that Sahagún's substance was also, though the reference to purple color makes it unlikely. If purple *Oscillatoria* or *Nostoc* were used as food at the time of Conquest, they are doubtless so used today, but the scene of the harvest may be expected to have shifted with the changing salinity of the Valley lakes and the decline of native salt manufacture.

127 The remaining invertebrates on Sahagún's list have drawn no atten-
136 tion from historians, and, possibly for that reason, they can be identified with some confidence. The *acocili* is clearly a crayfish, presumably *Cambarellus montezumae* (Saussure), and this is the modern Mexican name for that animal (DeBuen, 1944 a; Villalobos, 1943). Sahagún distinguishes it from the *camarón*, or shrimp (*Macrobrachium* or *Palaemon*), and discusses the latter in another part of the chapter, though without giving its Nahuatl name. Plate I, no. 219, leaves no doubt of the identification. In that figure it is accompanied by a dytiscid beetle larva, and this is presumably the *ocuiliztac*, which are "muy ligeros en el agua". Finally, the *aneneztli*, which "turns into those bugs (*coquillos*) that have four wings and fly, and are called hawks (*gavilanes*) in Castile", is almost certainly a dragon-fly larva (Odonata). No. 222 in Plate I appears to represent the adult.

127 One point should not escape notice, in this melancholy record of confusion: four centuries of scholarship have not sufficed to bring limnologic knowledge of the Valley of Mexico up to the stage attained by the Aztecs and used by them in their daily lives.

127 CHEMISTRY. An inorganic product of the lakes that was also fully exploited was salt. Ethnographic data on saltmaking have been collected
317 by Apenes (1944), and the importance of salt in aboriginal economy has been extensively discussed by Mendizábal (1929; reprinted in the *Obras Completas*, 1946). The latter author points out that evaporation by artificial heat is a practice introduced by the Aztecs and other high cultures of the highlands, and that the archaic method of solar evaporation survives in those areas less subject to Aztec domination. A standard feature of the more sophisticated method is the separation of silt by settling and filtration from the water to be evaporated, and today

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

the salt is commonly extracted from soil of several types rather from the water itself. This practice would be expected to arise in a country of inland salines, not along the seacoast. Moreover, fractional evaporation is used to give different products, according to Apenes, the last of the liquors being the source of saltpeter. We cannot yet be sure that the whole complex is pre-Cortesian, but it suggests a knowledge of limnologic and soil chemistry among the Aztecs that was at least as great as their ceramic and metallurgic skill would imply.[4] The point is not only of considerable importance, but is capable of verification by chemical archaeology; that no attempt to do so has been made so far is another indication that the scientific knowledge of non-Western peoples exceeds in some respects that of the historians and ethnographers who study them.

Salt is one of the seldom-considered essentials of human welfare. Mendizábal makes the provocative point that if the Aztecs had been more generous with their salt, the Tlaxcalans (who had no salines in their domain) might not have been so ready to ally themselves with Cortés, and the course of history might have been rather different.

HYDROGRAPHY. The demonstration that the Aztecs had detailed knowledge of all aspects of their lakes that might be used for human sustenance is not itself a proof that they had a developed limnologic science. Far more primitive people have known and done as much, and none of the practices mentioned, with the possible exception of fractional evaporation of salt water, are beyond the capabilities of the Banyoro, for example, who live on Lake Albert in Africa (Worthington and Worthington, 1933). The urbanization of Tenochtitlán, however, brought problems in its train that simpler societies could hardly have faced. Lake *villages* are known all over the world, but lake cities are much less usual. In meeting these problems the Aztecs and their

[4] A piece of chemical knowledge that has been entirely overlooked is the manufacture of some salt from urine. Bernal Diaz del Castillo (1910 edition, p. 72) mentions the sale of "many canoes full of human excrement, and these were kept in the creeks near the market, and this they use for making salt or tanning skins, for without it they say that they cannot be well prepared". The reference to tanning of skins shows clearly that the excrement was urine and not feces, for the tanning properties of uric acid are still taken advantage of in modern Mexico; moreover, Bernal Diaz goes on to describe the collection of feces and their use as fertilizer. What "salt" other than uric acid or sodium chloride could have been extracted from urine is problematical; nitrates would have been the most valuable, and they could conceivably have been separated from the chlorides by fractional evaporation, as in the case of salt water. In the history of western chemistry the most important salt found in urine was microcosmic salt, $NH_4\ NaHPO_4 \cdot 2H_2O$, which served Brand as the source of phosphorus.

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

823 neighbors demonstrated practical control over the lacustrine as well as other components of their environment.

127 133 At the time of the Conquest, according to extensive researches summarized by Orozco y Berra (1864), Maudslay (1908, 1910, in the 2nd and 3rd volumes of the Hakluyt Society edition of Bernal Diaz del Castillo), and especially by Schilling (1939) and Linné (1948), the Valley lakes were more or less one continuous sheet of water. Schilling's series of sketch maps is reproduced in Figure 1. Cortés, in his second [312] letter to Charles V (MacNutt edition, 1908, vol. 1), speaks of two lakes, because Lake Texcoco, the lowest-lying and most saline body of water, was separated from the freshwater portions by a great dike, the *albarradón* of Nezahualcóyotl. The Valley lakes of course were without outlet to the sea, and the drainage operations that began in the late 16th century and were made effective only in 1900 were devoted to the northward diversion of Lake Zumpango, regarded as the source of the most dangerous floods, to the Río Tula. The 16th-century historians believed that Texcoco had a subterranean outlet to the sea by way of a spring in the valley of Tula. Pomar (García Icazbalceta's edition, 1891, p. 38) claimed to have seen it, while Sahagún (Robredo edition, vol. 3, [782] p. 298) described the "whirlpool" in the center of the lake as the scene where small boys were sacrificed every year. It is reasonable to suppose that the legend of the outlet was believed by the acculturated Indians, but it does not follow that the educated Aztecs believed it.

127 133 312 The "Lake of Mexico" of the historical sources is usually the freshwater part that surrounded the Aztec capital, Tenochtitlán. This part is now dry, as is the southernmost lake of Chalco. Dikes that served as causeways connected Tenochtitlán with the mainland, but the most important dike from the hydrographic standpoint was that of Nezahualcóyotl, which lay to the east of the city. According to tradition, the dike was built by the king of Texcoco in 1446, during the reign of Montezuma I. It was 16 km long, and required the labor of 20,000 men. The reason given for its construction was to protect the Aztec capital from floods, though it is not clear why a Texcocan king should have contributed so generously to his rival's advantage. Of the advan- [241] tage, however, there can be no doubt. All of the southern valley floor, from Chalco to Tenochtitlán, was doubtless covered with *chinampas*, 127 the artificial islands that have been called "floating gardens" since the 133 days of the imaginative 18th century historian Clavijero. Floods along 731 the course of this drainage would on the whole have been beneficial, though inconvenient; the real danger threatened from the Texcoco side, whence salt water, driven by freshets or seiches[1] might disastrously drown the *chinampas*. Freshets, that brought large river fish through

[1] [i.e., an oscillation of the surface of a lake lasting from a few minutes to several hours, thought to be due to inequalities of atmospheric pressure. — Analyst]

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

Fig. 1. Sketch maps of the lakes of the Valley of Mexico, (1) during the Ice Age, (2) at the beginning of the 16th century, (3) at the beginning of the 19th century, (4) in 1889. Reproduced from Schilling (1939).

the salt lake from the streams on the eastern side of the Valley, were described by Motolinía in 1540 (Steck edition 1951, p. 263). That seiches also occurred may be inferred from Cortés' reference to "tides" (MacNutt edition, 1908, vol. 1, p. 256). Moreover, Sahagún records in Book Eight a tradition, regarded later as an omen of the coming of the Spaniards, to the effect that "the water of the lake foamed up, and

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

127 the wind did not stir it up. It was as welled up .... and it reached the
133 lower parts of the houses" (1954 edition, p. 18). There appear to
731 be no modern observations of seiches, but the extraordinary Gómara remarks (1940 edition, pp. 195–196) that "the salte water ebbeth and floweth, accordyng to the wynde that bloweth".

127 Whether irrigation was practiced in Middle America is a question
312 that has never been adequately considered (Millon, 1954; Palerm, 1955). Clearly it would not have been necessary in Aztec times in the Valley of Mexico; *chinampa* agriculture, which substituted for irrigation, has an ancient history in the Valley (Apenes, 1943), but it is not known elsewhere nearer than the Vale of Kashmir (West and Armillas, 1950). At other times and in other places it seems certain that the dense population could not have been maintained without irrigation. The great ceremonial center of Teotihuacán lies in a subdivision of the Valley that receives less precipitation than Mexico City, and some irrigation is practiced there today. We know from the work of Apenes (1943) and Sears (1952) that just prior to Teotihuacán times (about 500 B. C.) the Valley lakes were appreciably lower than today, and the conclusion is inescapable that Teotihuacán culture was founded on high ground and flourished during a dry time when irrigation must have been essential. Deforestation (Vaillant, 1941) complicates the hydrographic picture for Teotihuacán times but it is evident that the rise and spread of Aztec culture was related to increased moisture, reflected in high lake levels during the 14th to 16th centuries. The high levels would doubtless have continued through the 18th century, in agreement with climatic oscillations elsewhere, if sporadic attempts to drain the Valley had not been partially successful in the early 17th century (they were not completely successful until 1900).

Aztec control of hydrography, then, did not include irrigation where it was unnecessary, but was devoted, in the last centuries before the Conquest, to regulating the levels of the lakes. Before the Aztecs entered the Valley, however, they lived in many places, not all of
127 which were lacustrine. So far archaeology has made little progress in reconstructing the details of their history during the migration period. The problem is exceedingly complicated, and four centuries of scholarship have not made it less so. The Aztecs were interested in their own history, and attempted to draw it together in pictorial manuscripts. These have been lost, and what have come down to us are copies, made, probably from memory, by hispanicized Indians under the prodding of the 16th-century friars. In the interpretation and verbalization of these pictorial histories we have to contend with ideas implanted by the friars, and the result is a picture of the migration period that is strongly reminiscent of the wandering of the Israelites, joined to a

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

conception of city states within the Valley that owes much to the history 127
of Greece and medieval Italy.

For the special purpose of this limnologic history, we need to wade 127
into the "inextricable maraña" at only one or two points. On one 174
point the sources, such as they are, are almost unanimous: there was a 361
city called Tollán or Tula ("place of reeds" i. e. of *Typha*, the modern *tule*). Tollán is where the Toltecs came from, etymologically at least; the Toltecs were the predecessors of the Aztecs and the other Valley peoples, and were also regarded as ancestors by the Mexicanized Mayas of Yucatán, with whose tangled history we are fortunately not concerned here. The chief source of confusion, apart from the loss of the documents themselves, is the tendency, surely not a post-Conquest invention, for the relatively barbaric Valley people to identify themselves dynastically with the legendary founders of the civilization they inherited. The cultural picture is not an unfamiliar one, and probably was in actuality similar to that presented by the Etruscan foundations of Roman civilization; unfortunately, it comes to us on the testimony of friars who were only too well aware of such historic parallels, and could not refrain from asking leading questions. Be that as it may, Vaillant (1941), on the basis of archaeologic and historic researches, arrived at a satisfying conception of Aztec prehistory, in which the real and classic Tula (Tollán) was Teotihuacán, while memories of it played out their part in synthetic genealogies of "dynastic Toltecs", the chiefs of the wandering "Chichimec" tribes who entered the Valley after the decline of Tula in the 12th century.

Vaillant's picture was considerably upset by the excavations at Tula, 172
Hidalgo (Acosta, 1940, 1941, 1944; see also Du Solier, 1941, and 361
other papers in *Revista Mexicana de Estudios Antropológicos*, T. 5, no. 2–3, 1941). These showed clearly that Tula, not Teotihuacán, was the Tollán from which emanated the Mexicanization of Chichén Itzá. Thus Tula was the Mayas' Tula, but whether it was necessarily the Mexicans' Tula is not so easily admitted, and is still in sharp dispute. What interests us here is whether Tula was a lacustrine city, for Teotihuacán was not.

The Codex Ramírez, authoritatively regarded as a manuscript copy 127
of the *Relación del origén de los yndios*, probably 1583–87, by the 174
Mexican Jesuit Juan de Tovar (see Kubler and Gibson, 1951, for discussion), is one of several almost identical histories of the migration period from the Aztec (i. e. not from the Texcocan) point of view. It happens to be the only one of which a convenient English translation exists (Radin, 1920), and from it we quote the following account of Tula.

"The remainder of the community with their chief and their ark

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

127 174 arrived at the town-called Tula, quite diminished in numbers on account of the divisions that had taken place. There they remained some time, replenishing their provisions and increasing their number, living in a cerro called Cohuatepec, that is to say, the snake-mountain. Here, in dreams, their idol ordered his priests to deflect the water of a very full river that flowed through that region so that it might spread over the whole valley and then be brought to the middle of the mountain on which they were living, for he wished to show them the appearance of the land he had promised them. They constructed the dyke and the water spread out and extended over the whole valley, turning it into a very beautiful lagoon lined with willows, poplars, and sabines. In the lagoon grew many rushes and reeds, and on that account the place was called Tula, meaning the-place-of-the-rushes (*junca*) or reeds (*espadaña*).

"The place soon abounded in fish and waterfowl, such as ducks, herons, *gallareta* [coots], with which, together with many other species of birds, the entire lagoon seemed to be completely covered. And to the present day the lagoon of Mexico abounds in these animals.[8] The place was thickly covered with rushes (*carrizales*) and marine flowers, and inhabited by differently colored thrushes, some red, others yellow, which were accustomed to gather at the place and which harmonized with the songbirds in the trees, of which there were quite a number; all this making the place delightful and pleasant, and as such it was painted in their books.

"The Mexicans, quite oblivious to what their idol had told them, namely that this place was merely an imitation and pattern of the land they were to be given, stayed in this delightful place (a long time) and began to feel that it was quite satisfactory, some even saying that they desired to stay there permanently, and that this was really the place selected by their god Huitzilopochtli; that it was from that place that they were to follow their desires, being the rulers of the four parts of the world, etc.

"Their idol, seeing this, waxed so angry that he said to the priests, 'Who are these who thus wish to transgress and put obstacles in the way of my orders and commands? Are they perhaps greater than my-

[114] [8] The *Crónica Mexicana* of Alvarado Tezozomoc (1598), another of this group of closely similar histories, is more explicit about these animals, listing frogs, *axolotl*, *camarón*, *axayácatl*, *izcauitli* and *tecuitlatl*, and adds that the Mexicans regarded the red *izcauitli* (identified above as Ephydridae, but possibly Chironomidae in this context) as the body and blood of the war god Huitzilopochtli (Orozco y Berra's edition, 1878, p. 228). A more probable explanation of the attribution of red color to *izcauitli* is that some one, not necessarily Tezozomoc, confused the Nahuatl words *iztatl*, salt, and *eztli*, blood.

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

self? Tell them that I will take vengeance before tomorrow and that they should not dare to give advice about matters which are for me to determine. Let them know that all they have to do is to obey'. Having said this, those who saw assert that the idol looked so ugly and frightful, that all were terrified and frightened. On that very night, it is said, when everything was quiet, a loud noise was heard in part of the camp and when the people rushed there in the morning, they found that all those who had spoken in favor of remaining in this place were dead with their breasts torn open and their hearts torn out. In this way it was that they were taught that most cruel of sacrifices, a custom they always practiced after that, which consisted of cutting open a man's chest in order to tear out his heart and offer it to their idols. (The reason they did that) they claimed was because (their god) ate only hearts.

"Having thus punished them, Huitzilopochtli ordered his priests to tear down the dykes and repairs they had made when they deflected the course of the water to form the lagoon and instructed them to make the river take its former bed. This they did, and the entire lagoon being thus emptied of water the place became as dry as it had been before. When the Mexicans, after some time, saw how sterile the place had become, and realized also that their god was incensed at them, they consulted him, raised their camp, and set out from the neighborhood of Tula in the year 1168 A. D."

— — Radin's translation, 1920, pp. 73–74.

This circumstantial account, alas, cannot be taken as showing that there was an artificial lake at Tula. The more operational suggestion that emerges is that Tula, as understood by Tovar's Aztec informants, was whatever place can be shown to have had an artificial lake. But even this suggestion is hardly worth following up, as the following argument implies.

The "pure" glyph for Tollán (Tula), as it occurs in the Codex Xólotl (Dibble 1951) and the Codex Mendoza (Clark, 1938) consists (Figure 3) of a row of cattails, *Typha* (identified as *Cyperus flavicomus* Michx. by Clark, whose botanical identifications are undocumented and not always reliable). In the *Tira de la peregrinación México* (Anonymous, 1944), commonly known outside Mexico as the Codex Boturini, we have an Aztec pictorial history that is somewhat more influenced by European draughtsmanship; it shows Tula (Figure 2) as cattails in a lake, accompanied by a large-scaled fish that looks remarkably like a carp. Tula is also shown in the pictures that accompany Tovar's *Relación* (the Codex Ramírez, Orozco y Berra's edition, 1944, Lam. II), which, like the text, represent a version of Diego Durán's

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

127 212 *Historia de las indias de Nueva-España y islas de Tierra Firme,* 1579 (Mexico, 1867–80). In this scene the most important glyphic element is the hill with a snake (Coatepec, the hill near Tula). It stands in the middle of lake beset by cattails, in which are swimming a bird, a fish, and a seal, while pollarded trees stand around, each with a bird on top. Two dignitaries are seated at either side, the male with a glyphic name representing a bird and a cactus, while the female is provided with a standard on which is seen an axolotl, rampant, with enormous external gills.

Fig. 2: Contaminated glyph for Tula, as it appears in the *Tira de la peregrinación México* (Codex Boturini) (Anon., 1944).

The implication of this curious inconography is clear and disheartening. The details about the lake of Tula were concocted by native informants to explain the glyph, probably in a manuscript now lost. Later, the pictures were drawn to illustrate the story. The glyph that provoked the story need not have been that of Tollán, for any place with *tules* in its etymology would have sufficed. We must conclude that we do not know whether Tula was situated on an artificial lake, or even whether its name was Tollán.

127 The hydrographic knowledge of the Aztecs, then, must not be judged by what was told to credulous friars by acculturated Indians fifty years after the Conquest. Cortés' account, though doubtless somewhat colored, has more of the ring of truth. In the famous Second Letter to Charles V, he said:

127 231 312 "Along one of the causeways which lead into the city, there are two conduits of masonry each two paces broad, and five feet deep, through one of which a volume of very good fresh water, the bulk of a man's body, flows into the heart of the city, from which all supply themselves, and drink. The other which is empty brings the water, when they wish to clean the first conduit, for, while one is being cleaned, the water flows through the other" (MacNutt edition, vol. 1, p. 262). Again, describing one of Montezuma's lesser palaces, he said: "It had ten pools of water, in which were kept all the many and divers breeds of waterfowl found in these parts, all domesticated; for the sea-birds, too, there were pools of salt water, and, for those of the rivers and lakes, there was fresh water, which for the sake of cleanliness, they renewed at certain times by means of pipes. To each kind of bird they gave the food which suited its habits in its free state, so that to those which ate fish they gave it; and likewise, worms, maize, and smaller

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

seeds were supplied as required by the different birds. I assure Your Highness that all those birds which ate only fish received each day two hundred and fifty pounds, caught in the salt lakes." (*ibid.*, pp. 265–266).

Such a people could surely have dammed a stream to make an artificial lake, and if they cannot be proved to have done so at Tula, the point is probably not very important.

ICONOGRAPHY AND CARTOGRAPHY. The suggestion that the elaborately "historical" description of Tula was a pure invention, prompted by the cattails of the glyph, shows how wary we must be of inferring Aztec ideas from the pictorial manuscripts. Water and aquatic elements are widely scattered through the existing texts, but there is no necessary limnologic significance in the fact, for the symbol for water, *atl*, came to stand for the vowel-sound *a*, and a glyph that seems to the naive eye to show a lacustrine scene is usually nothing but a condensed rebus for a word in which *a* occurs (Peñafiel, 1885). However, the fact remains that Aztec hieroglyphics were caught at a stage in the evolution of syllabic writing in which the rebus is unusually representational, and the iconography itself is not without limnologic interest.

Rands (1955) has discussed Mesoamerican water symbolism in comprehensive fashion, though without particular emphasis on Aztec culture, and has discerned an extraordinary uniformity in diversity. The widespread distribution of sympathetic or imitative magic produces a high degree of constancy, in the art of all peoples, of certain aquatic connotations: rain, growing things, aquatic animals, clouds, liquids produced from various parts of the human body, etc. What Rands has shown is more surprising, a high degree of iconographic constancy, such that the same pictorial symbols (e. g. the columnar-wavy depiction of falling water) recur, in widely different styles and contexts in painting and sculpture from Maya, Mixtec, and Toltec cultures. Of particular importance for our area is the demonstration that Aztec water symbolism descends directly and with little change from Classic times, as represented by the murals of Teotihuacán.

The most satisfactory Aztec representations of water are the glyphs for place-names, because these can be read. Some of the more interesting are illustrated in Figure 3, redrawn by Martha Dimock from Clark's (1938) edition of the Codex Mendoza. The fact that this is a post-Conquest document raises legitimate doubts about the authenticity of some of its Spanish glosses, but the glyphs themselves are surely faithful versions of prototypes in lost Aztec manuscripts. The basis of this confidence is the fundamental similarity between these pictures and those in the Mixtec codices from southern Mexico, which are certainly

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

103 pre-Conquest (Spinden, 1935). Some lacustrine scenes (if that is what
212 they are) are reproduced on Plate II from the Codex Nuttall, published by the Peabody Museum of Harvard University in 1908.

As may be seen in the case of *Acocolco*, "twisted water" (Figure 3 B), the glyph for water is compound, and its several elements reappear in other contexts. Essentially it consists of a stream, painted

Fig. 3. Some Aztec place-name glyphs referring to water, lakes, and salt, redrawn by Martha Dimock from the Codex Mendoza (Clark, 1938). A, Hueyapán, "on the lake" (*xeiatl*, lake + *pantli*, banner, ideograph for *pan*, on) (Clark's no. 192). B, *Acocolco*, "twisted water" (*atl*, water + *cocoloa*, to go by twisting and turning) (Clark's no. 352). C, Acozpan, "yellow water" (*atl*, water + *coztic*, yellow) (Clark's no. 578). D, Xalac, "sandy water" (*xalla*, sandy + *atl*, water) (Clark's no. 355). E, Atlán, "near the water" (*atl*, water + *tlanti*, teeth, ideograph for *tlan*, place of) (Clark's no. 606). F, Chilacachapán, "place of *chilacaxtli*" (*chili* + *acaxitl*, small lake, ideograph for *chilacaxtli*, *Azolla* sp.; combined with *atl*, water) (Clark's no. 430). G, Tequixquiac, "saltpeter water" (*tequixquitl*, saltpeter + *atl*, water) (Clark's no. 16). H, Zilán, "shells" (Clark's no. 116). I, Tamazolan, "toad" (Clark's no. 517). J, Iztatlán, "near the salt" (*iztatl*, salt + *tlantli*, teeth, ideograph for *tlan*, near) (Clark's no. 161). K, Iztacalco, "salt house" (Clark's no. 232). L, Ayotlán, "turtle" (Clark's no. 560). M, Tollán, "cattails" (Clarks's no. 66). N, Chalco, "jewel" (*chalchihuitl*, jadeite + *co*, in).

turquoise-blue, with eddies and waves. At the tips of the waves, usually in alternation, the Aztec glyph shows two sorts of symbols, and these alone may represent water, as in *Acozpan*, "yellow water" (3C). One of these is a shell, and reappears by itself in *Zilán* (3H). The other, though interpreted as a drop by Clark, is almost certainly a precious

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

stone, *chalchiuhtl*, and is a miniature of the full glyph as it occurs in the name *Chalco* (3N). The relation among shells, jewels, and water is made clear on Plate 103 of the de la Cruz-Badianus herbal (Emmart's edition, 1940), where it is said that whoever would cross a river or a lake in safety is to carry in his hand a beryl, both "head" and viscera of a snail, and a sardonyx, while in his mouth he should carry the eye of a large fish. Presumably either "beryl" or "sardonyx" of both stem from mis-translations into Latin of the Nahuatl *chalchiuhtl*, which is ordinarily jadeite, but in this context is probably green turquoise. The stone was sacred to the water goddess *Chalchiuhtlicue* and would be understandably related to water on account of its color. As to the snails, four or five kinds, all with viscera, are illustrated in the Mixtec codex, one (at the left side of the top figure of Plate II) being obviously identical with the shell of the Aztec glyphs. It is probably an *Oliva*, judging from the wide use of this type for ornaments in Mesoamerica, but from the picture itself it could equally well be a freshwater melaniid. This or a similar gastropod also forms the basis of the most famous of all Mesoamerican symbols, the Maya glyph for zero. The larger snails with spines are probably *Murex* or *Purpura*, which, as the source of purple dye that was used in this codex, have both a magical and a practical connection with water.

The fact that some or all of the shells are marine presumably led Spinden (1928, p. 247) to identify the page from the Codex Nuttall (here shown at the top of Plate II) as "the conquest of a town situated on an island of the sea", and Thompson (1933, p. 245) made the same inference. The alligator, on the other hand, is not marine, and two other creatures appear to be partly mythical: the serpent, and the fish with the head of a bird, which answers the description of Sahagún's *totomichin*. The association is clearly with water in general, and if the painting represents any particular body of water the fact that it is enclosed by banks suggests that a lake is intended. The question can probably be settled eventually by identification of the island; for example, if the frieze at the base of the island in Plate II top, were black and white, instead of brown, red, and blue, we would know it to be Tilantongo (Caso, 1949).

What is particularly interesting is that while water in general is commonly represented by a stream drawn in plan, even when the stream is dry, as in *Xalac* (3D), "sandy water", lakes are commonly shown in section. *Hueyapán* (3A), "on the lake", is an exception, but as waves, jewels, and shells are all missing from this glyph it has a close resemblance to the glyph for "mirror" that is probably intentional. *Atlán* (3E), "near the water", *Chilacachapán* (3F), "place of

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

103 212 *chilacaxtli* = *Azolla* sp.", and *Tequixquiac* (3G), "saltpeter water", all contain the idea of a lake as well as the sound for water, and all are shown in section. The ideology behind the glyphs was undoubtedly formed before the Aztecs entered the Valley of Mexico, during their wanderings through semi-arid country where streams are of vital importance and lakes are small and astatic. Moreover, the glyph for flowing water is a horizontal waterfall, and is the widespread and ancient Mesoamerican columnar stream, (Rands, 1955), rotated 90 degrees. It is probably no accident that streams are shown as something to be crossed, while lakes are thought of as bodies of water with definite boundaries and *containing* useful objects.

The remaining glyphs of Figure 4 require little comment. *Tamazolan* (3I), "toad", is perfectly clear, and Sahagún gives this as the meaning, but Clark interprets it as "frog". *Iztatlán* (3J), "near the salt", is a salt-pan, with *tlantli*, teeth, showing the place-name ending, while *Iztacalco* (3K), "salt house", is literally that: an earthen *pila* serving as a filtration apparatus in which the clear salt water is collected before being placed in the evaporation basin shown at the top. *Ayotlán* (3L), "turtle", is obviously a freshwater species, probably *Kinosternon hirtipes*, though Clark's interpretation ("a captured turtle on its back") shows confusion with the marine *Chelone*, whose name was *chimalmichin* ("shield fish"). *Tollán* (3M), "cattails", has been discussed in the previous section.

127 823 If the Aztecs commonly thought of lakes edge-on, so to speak, they were perfectly capable of showing them in plan. For cartographic purposes it would be essential to show a bird's-eye view, and there are many indications that Aztec cartography was well developed (Linné, 1948). No certain examples have survived, unless we except the famous "maguey plan" (Toussaint *et al.*, 1938) that shows part of the [289] city of Tenochtitlán. This map is not on maguey paper, as Maudslay (1910) and many others have believed, but on native paper made of *Ficus* bark (Lenz, 1948), and unpublished work by D. Robertson suggests that it is in fact a pre-Conquest document on which later elements, such as churches, have been superimposed. Whether pre-Conquest or not, it shows the lake of Mexico only by implication, as empty space off the edge of the city. The Codex Xólotl, an early but not pre-Conquest Texcocan pictographic manuscript, clearly shows the Valley lakes with a string of mountains overlooking them, but not in a way suggesting that a map was intended. The nearest equivalent to an Aztec map of a lake is probably the "Aztlán" picture in the Codex Boturini, reproduced in Figure 4. In fact, since the two earliest European maps of the lake of Mexico (in the 1524 Nuremberg edition of Cortés' Letters

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

and in the 1556 Ramusio edition of the "Anonymous Conqueror") are obviously imaginary, it may be said that the Boturini picture is possibly the oldest surviving map of a New World lake, and it is ironic that we cannot say what lake it represents. 127 823

About this famous picture all that can be said with confidence is that it shows a lake with an island. The island is universally identified as *Aztlán*, the legendary home of the Aztecs, yet the glyph at the top 127 212 823

Fig. 4. Origin of the Aztecs, from the *Tira de la peregrinación México* (Codex Boturini). The town, here labelled *Aacatl*, but identified by authorities as *Aztlán*, is situated on an island in a lake, presumably in western Mexico.

designates it as *Aacatl* (*atl*, water + *acatl*, reed). *Aacatl* turns up on a later page as a personal name, and it may indeed be the name of the male figure at the right of the island, for he is otherwise nameless, though his female companion is named *Matlalin*, from *matlatl*, a fish-net. It would be idle sport to list all the places that Aztlán is supposed to have been; Orozco y Berra (1880, p. 66–68) considered it to be the island of Mexcalli in Lake Chapala, while Seler (n.d.) rejected all the legendary wanderings of the Aztecs in western Mexico and brought Aztlán, full circle, back to the Valley of Mexico itself. Escalona (1943) argues with some plausibility for the lake of Metztitlán, in Hidalgo, while Rendón (1948), with even greater plausibility, prefers the lake at the headwaters of the Río Lerma, just west of the Valley. The truth is that the Aztlán part of the Aztecs' history appears full-blown in the circle of Jesuit histories stemming from the Dominican Durán, while 127

10:Deevey N-4 (no date)1957 NU7 Aztec NU7

the Franciscan version, as embodied for example in Sahagún, makes no mention of it. Since some of the "sources" place the Aztecs on Lake Pátzcuaro at one stage of their wanderings, it is amusing, in this work that started from limnologic experience on that lake, to consider that Aztlán may have been the island of Janicho. Certainly the possibility cannot be dismissed that Pátzcuaro was in the mind of the acculturated artist who drew the picture.

If Aztlán had no more reality than the artificial lake at Tula, the delightful possibility arises that the name *Aztec* itself is a chimaera. Clark (1938) actually takes this position, and it is true that the inhabitants of Tenochtitlán were Tenochca, the speakers of Nahuatl were Nahua, and we are left with *Aztec* as a book-name that is conveniently applied to a culture. Barlow (1945) accepted the tradition, found in most of the post-Conquest sources, that the Aztecs changed their name to Mexica when they learned to worship Huitzilopochtli, and he therefore preferred "Empire of the Culhua Mexica" to "Aztec Empire" for the political unit of the late 15th and early 16th centuries. What is reasonably clear is that the etymology of the name was a late invention. The basis of the name *Aztlán*, which means "near the [place of the] egret", was probably a glyph containing an egret, or an egret-feather ornament. Doubtless it was through some long-forgotten pun that the name came to be associated with the word *Aztec*. Remembering that the pun need not have arisen in the Nahuatl language, but could have been in Mixtec, we can hardly hope to recover the ultimate ancestry of Aztec culture from etymology, particularly when the supposed sources so obviously confuse the derivation of words with the derivation of peoples.

But if we cannot prove that the Aztecs sprang from an island in a lake, we cannot deny that that is where they lived and died. The remarkable people who harvested salt-flies and practiced water-bug husbandry, who piped fresh water and farmed salt, and who thought of lakes in profile, had ample reason to associate themselves with egrets.

MICHOACÁN

In marked contrast to the wealth of 16th-century source material on the Valley of Mexico, information on the lake district of Michoacán is scanty. The province was relatively fortunate in its 17th-century chroniclers, but by the time these men came to write their histories there was little native culture left to write about. The Tarascan civilization was evidently as well developed as the Aztec; comparative material on ceremonials and customs is given, though briefly, by Sahagún, and
